- **1 8.5.162.06**
  - 1.1 Helpful Links
  - 1.2 What's New
  - 1.3 Resolved Issues
  - 1.4 Upgrade Notes

## What's New

This release contains the following new features and enhancements:

- Workspace Desktop Edition (WDE) is now supported on VMWare Horizon 8 ESB 2312.1. For more detailed information about the other supported operating environments, see the [Workspace Desktop Edition](#) page in the *Genesys Supported Operating Environment Reference Guide*. (IW-18124)
- WDE now supports TLS v1.3. (IW-18054)

## Resolved Issues

This release contains the following resolved issues.

---

Workspace customization developers can now access the actual value of **ObjectPath** and **FolderId** attributes when using the configuration objects (CfgPerson, CfgApplication...) retrieved through the **IConfigurationService** interface.

To enable this feature,

- In the configuration file **interactionworkspace.exe.config**, in the section **<appSetting>**, add the tag `<add key="general.configuration-object-path-folder-id.enabled" value="true" />`.
- In case if the **general-configuration-object-path-folder-id-enabled** option is available in the **interaction-workspace** section of the Application object, ensure it is set to `true`.

Previously, starting from release 8.5.161.03, it was not possible to get the value of the **ObjectPath** and **FolderId** attributes.  
(IW-18141)

---

## Upgrade Notes

No special procedure is required to upgrade to release 8.5.162.06.
