Resolved Issues

This release contains the following resolved issues:

The Recording Crypto Server (RCS) now correctly suppresses the jetty trace logs when the debugging option **suppress-debug-loggers** is enabled. (GIR-13643)

The Recording Crypto Server (RCS) now includes the following cache control in the HTTP headers sent with an HTTP response:

Cache-Control: no-cache, no-store
Pragma: no-cache

Previously, when there were no cache control headers sent in the HTTP response, browsers such as Internet Explorer might cache the HTTP response causing the HTTP keepalive message to not be sent. This resulted in occasional playback issues with SpeechMiner. (GIR-13319)

Upgrade Notes

No special procedure is required to upgrade to release 8.5.080.76.
