Contents

Prerequisites

- Check the list of environment prerequisites, and confirm that your system meets these standards prior to installing SIP Endpoint SDK.

Procedure

Start of procedure

1. Copy the zip archive containing the SIP Endpoint SDK for Apple OS from your product CD to your desired installation location.

2. Unzip the archive.

3. Copy the ip_description.xml and read_me.html files from your product CD into the root level of the unzipped archive.

4. Copy the Log4Cocoa.framework and SipEndpoint.framework folders located in the Bin folder of your installation to the /Library/Frameworks folder on your computer.

5. Copy the libresample.dylib.1 file located in the ThirdParty folder of your installation to the /usr/lib folder on your computer.

End of procedure Next Steps

- To review the installation of your SIP Endpoint SDK files, continue by verifying the installed components.
