# SIP Endpoint SDK Overview

SIP Endpoint SDK for OS X Components

4/21/2025

# SIP Endpoint SDK for OS X Components

## Important

The following features are not supported:

- Video
- IPv6
- NAT, ICE, TURN, STUN
- SIP Cluster
- SIP Proxy

The SIP Endpoint SDK for OS X distribution consists of the following main components:

- The SDK itself, which provides all of the SIP-related functionality by way of the SIP Endpoint Framework. The SDK also provides an interface that you can use to integrate it into different GUI-based applications.
- A **QuickStart application** which is built on the SIP Endpoint SDK.

The SDK itself communicates with a SIP Provider interface, which links the SDK to the SIP Provider, as shown in the following diagram.
