Setting Up Elasticsearch

5/5/2025

Setting Up Elasticsearch

Elasticsearch is a fast, clever search engine with the power to handle large data volumes. It is a scalable search engine based on distributed data storage that performs real-time searches and supports multi-tenancy. Elasticsearch streamlines backup processes and ensures data integrity. It uses Javascript Object Notation (JSON) and Java application program interfaces (APIs) and automatically indexes JSON documents. With Elasticsearch each index can have its own settings and each index can be easily recovered if a server crashes.
