# Log File Management Tool Deployment Planning

This chapter describes how to properly size storage and system resources for an LFMT deployment.

Sections within this Planning chapter:

- [LFMT Client - GAX Dependencies](#)
- [LFMT Storage and Resource Sizing](#)
- [LFMT Database Sizing](#)

## Important

- Please note that the sizing and performance recommendations are based on tests performed in an environment of up to 1000 agents; therefore these should be used as guidelines only.
- Please monitor your environment and apply your observations and experience to the formulas presented here to extrapolate the actual sizing of your LFMT environment.
