## About Genesys

Genesys Telecommunications Laboratories, Inc., a subsidiary of Alcatel-Lucent, is 100% focused on software for call centers. Genesys recognizes that better interactions drive better business and build company reputations. Customer service solutions from Genesys deliver on this promise for Global 2000 enterprises, government organizations, and telecommunications service providers across 80 countries, directing more than 100 million customer interactions every day. Sophisticated routing and reporting across voice, e-mail, and Web channels ensure that customers are quickly connected to the best available resource—the first time. Genesys offers solutions for customer service, help desks, order desks, collections, outbound telesales and service, and workforce management. Visit [www.genesyslab.com](http://www.genesyslab.com) for more information.

Each product has its own documentation for online viewing at the Genesys Technical Support website or on the Documentation Library DVD, which is available from Genesys upon request. For more information, contact your sales representative.

# Chapter 1: Introduction

Interaction Database (IDB) structure can be divided into six schemas:

- Core Schema, consisting of 76 tables
- Outbound Contact Schema, consisting of 12 tables
- Multimedia Attached Data Schema, consisting of 2 tables
- Virtual Queue Schema, consisting of 1 table
- Custom States Schema, consisting of 3 tables
- Custom Dispatcher Attached Data, consisting of 1 table

This document presents these schemas in separate chapters each containing one or more detailed diagrams of the schema and an examination of its tables presented in alphabetical order. Included in this examination are descriptions of each table and each of the table's fields. Field descriptions include a summarization of the most common database properties, such as code name, data type, and key information. Some of the abbreviations used to characterize fields throughout this document are:

- P, for primary key
- M, for mandatory field
- F, for foreign key

Abbreviations for index characterizations include:

- U, for unique
- C, for cluster

The field names in this document are provided in a free-style format with regard to letter case (for example, TenantID instead of TENANTID), whereas the actual field names are in uppercase in the SQL scripts used to initialize IDB. The Code column in the Column Lists for the tables shows the proper capitalization of each field.

Interaction Concentrator creates other tables that are reserved for internal use only. These tables are not described in this document.

## System Fields

Certain fields appear in multiple tables. These fields, whose field names all begin with GSYS\_, are reserved for use by internal Genesys system functions. Because these fields appear globally and have identical meanings regardless of where they appear, this document does not repeat the description of each field under each table where it appears. Instead, the fields are described below:

GSYS_DOMAIN	Reserved for internal use
GSYS_PARTITION	A key that is used for partitioning
GSYS_DOMAIN	Reserved for internal use
GSYS_SYS_ID	Reserved for internal use
GSYS_SEQ	The non-unique sequence number of the statements to be inserted into the database.
GSYS_USEQ	The non-unique sequence number of the statements to be updated in the database.
GSYS_TS	Reserved for internal use
GSYS_TC	Reserved for internal use

GSYS_EXT_VCH1	Reserved for internal use
GSYS_EXT_VCH2	Reserved for internal use
GSYS_EXT_INT1	Reserved for internal use
GSYS_EXT_INT2	Reserved for internal use

For certain tables, the following exceptions apply to these field descriptions (listed by table).

#### GC\_\* and GCX\_\* Tables

GSYS_EXT_INT1	<p>A flag indicating the reliability of timestamp information stored in the CREATED and DELETED fields. One of the following values:</p> <ul style="list-style-type: none"> <li>0 – highly reliable; timestamps for both fields are taken from Configuration Server runtime notifications.</li> <li>1 – CREATED timestamp is that of the time when configuration data was requested from Configuration Server; either during the initial ICON startup or during synchronization.</li> <li>2 – DELETED timestamp is that of the time when configuration data was requested from Configuration Server; either during the initial ICON startup or during synchronization.</li> <li>3 – both CREATED and DELETED timestamps are taken from the time when configuration data was requested from Configuration Server; either during the initial ICON startup or during synchronization.</li> </ul>
---------------	---

#### G\_AGENT\_STATE\_HISTORY Table

GSYS_EXT_INT1	Media type. See possible values in the G_DICTIONARY table for DTYPE=6.
GSYS_EXT_INT2	Agent's 'busy level'. Number of the calls with the agent connected with on the time of the history record added. Counted separately for each agent's login session (if more than one exists on the same time on the different switches.).
GSYS_EXT_VCH1	The name of the media type, as reported by Interaction Server for open media interactions. For example, "fax".
GSYS_EXT_VCH2	If the gls-store-event-seq configuration option is set to 1, then this field stores the event sequence number, as a string, from the triggering event for this record. Otherwise, this field is either 0, when events come from Interaction Server 7.5, or null, in case of Interaction Server 7.6 or T-Server 7.5 <sup>+</sup> .

#### G\_AGENT\_STATE\_RC Table

GSYS_EXT_INT1	Media type. See possible values in the G_DICTIONARY table for DTYPE=6.
---------------	--

GSYS_EXT_VCH1	The name of the media type, as reported by Interaction Server for open media interactions. For example, “fax”.
GSYS_EXT_VCH2	If the gls-store-event-seq configuration option is set to 1, then this field stores the event sequence number, as a string, from the triggering event for this record. Otherwise, this field is null.
GS_AGENT_STAT and GS_AGENT_STAT_WM Tables	
GSYS_EXT_INT1	Media type. See possible values in the G_DICTIONARY table for DTYPE=6.
GSYS_EXT_VCH1	The name of the media type, as reported by Interaction Server for open media interactions. For example, “fax”.
G_CALL Table	
GSYS_EXT_INT2	<p>A flag indicating stuck calls:</p> <p>0 – indicates that the interaction should not be marked as stuck.  ICON records this value upon start of call termination to prevent marking calls as stuck and to complete the processing of interactions following the recording of related userdata in IDB.</p> <p>1 – indicates an interaction that has been determined to be stuck.</p> <p>NULL – the value of records before the processing of call termination begins.</p>
GSYS_EXT_VCH1	The name of the media type, as reported by Interaction Server for open media interactions. For example, “fax”.
G_DND_HISTORY	
GSYS_EXT_VCH2	If the gls-store-event-seq configuration option is set to 1, then this field stores the event sequence number, as a string, from the triggering event for this record. Otherwise, this field is null.
G_IR Table	
GSYS_EXT_INT1	<p>A flag indicating the source of the interaction:</p> <p>1 – indicates a multimedia interaction originating from a Genesys Interaction Server.</p> <p>NULL – indicates a voice interaction originating from a Genesys T-Server TEvent processing</p>

GSYS_EXT_INT2	<p>Can be set by the GSYSIRMerge procedure during interaction merge execution.</p> <p>Set to one of the following values:</p> <p>NULL – interaction has not yet been merged</p> <p>0 – single-site interaction</p> <p>1 – inter-site interaction, whose parts reside in several IDBs. ICON also places a corresponding record in the SYS_DNPREMOTE LOCATION table.</p>
GSYS_EXT_VCH1	<p>If the record was created as a result of Multimedia event processing and the information about parent interaction ID was provided by a Multimedia Interaction Server, but no related record in IDB was detected (due to the purge of the old records, for example), this field will contain this ID.</p>
GSYS_EXT_VCH2	<p>A flag indicating stuck interactions:</p> <p>“0” – indicates that the interaction should not be marked as stuck. ICON records this value upon start of call termination to prevent marking calls as stuck and to complete the processing of interactions following the recording of related userdata in IDB.</p> <p>“1” – indicates an interaction that has been determined to be stuck.</p>
G_IS_LINK Table	
GSYS_EXT_INT2	<p>Can be set by GSYSIRMerge procedure during interaction merge execution.</p> <p>Set to one of the following values:</p> <ul style="list-style-type: none"><li>• -3 - partially merged (reattached nodes)</li><li>• -2 - neither interaction record (IR) has terminated</li><li>• -1 only one IR has not terminated</li><li>• 0 - all IRs have been terminated (ready for merge)</li><li>• 1 - partially merged (not reattached)</li></ul>
G_PARTY Table	
GSYS_EXT_INT1	<p>The sequence number of the call (CSEQ) in party creation.</p>

## G\_ROUTE\_RESULT Table

## GSYS\_EXT\_INT1

A flag indicating the reliability of the virtual queue's ID stored in the GSYS\_EXT\_VCH1 field. One of the following values:

- 0 – unknown – no information about a virtual queue is reported in the corresponding EventRouteUsed.
- 1 – reliable – the virtual queue's ID that is stored in the field GSYS\_EXT\_VCH1 is taken from the corresponding EventRouteUsed.
- 2 – Valid in the past – the value of the virtual queue's ID stored in the field GSYS\_EXT\_VCH1 was valid in the past, before a call has been transferred to another Routing Point in a multi-site routing scenario.

## GSYS\_EXT\_VCH1

The virtual queue's ID, if a virtual queue is configured and reported to ICON by URS. If reported, the value is the same as G\_VIRTUAL\_QUEUE.VQID.

## GX\_SESSION\_ENDPOINT Table

## GSYS\_EXT\_INT1

Media type. See possible values in the G\_DICTIONARY table for DTYPE=6.

## GSYS\_EXT\_VCH1

The name of the media type, as reported by Interaction Server for open media interactions. For example, "fax".

## GM\_L\_USERDATA Table

## GSYS\_EXT\_INT1

A type of the party that issued a request to stop an interaction processing and that is named in the GSYS\_EXT\_VCH1 field. One of the following values:

- 0 – unknown – no information is available about the party that requested to stop an interaction processing.
- 1 – strategy – the interaction processing has stopped because of a routing strategy.
- 2 – agent – the interaction processing has stopped at an agent request, and the agent's Employee ID was provided with login.
- 3 – place – the interaction processing has stopped at an agent request, and the agent is identified by the place of login.
- 4 – media server – an application that handles open media interactions issued a request to stop an interaction processing.

**GSYS\_EXT\_VCH1**

The party that issued a request to stop an interaction processing. One of the following values:

- NULL – NULL is reported instead of the name when no information is available about the party that requested to stop interaction processing. (GYS\_EXT\_INT1 field is set to 0.)
- Strategy name – the name of the routing strategy that issued a request to stop an interaction processing. (GYS\_EXT\_INT1 field is set to 1.)
- Agent's ID – the employee ID of the agent who issued a request to stop an interaction processing. This value is reported for agents who provide the employee ID at login. (GYS\_EXT\_INT1 field is set to 2.)
- Place name – the name of the place where an agent is logged in, when an agent who issued a request to stop an interaction processing has not provided the employee ID at login. (GYS\_EXT\_INT1 field is set to 3.)
- Media server name – the name of the application that has stopped an interaction processing. (GYS\_EXT\_INT1 field is set to 4.)

**GSYS\_EXT\_VCH2**

The ID of the party that issued a request to stop an interaction processing and that is named in the GSYS\_EXT\_VCH1 field. One of the following values:

- The same as GM\_L\_USERDATA.PartyID for a strategy, an agent, or a place.
- NULL, if the request originator is either a media server or unknown.

**Document References**

Finally, because much of information that IDB stores originates from T-Server and Configuration Server, you might find the following references useful for better understanding the values and makeup of IDB fields:

- *Reporting Technical Reference Guide for the Genesys 7.2 Release*, contains a detailed description of the Genesys T-Server, Multimedia Interaction, call, and statistical models.
- *Configuration Platform SDK 7.6 .NET or Java API Reference*, describes the schema of the Configuration Database.
- *Genesys 7 Events and Models Reference Manual*, contains a description of T-Events.
- *Interaction Concentrator 7.6 Deployment Guide*, contains a description of the configuration options that affect whether ICON writes data to some tables.
- *Interaction Concentrator 7.6 User's Guide*, contains a high-level description of IDB and a description of ICON stored procedures.

## Chapter 2: Core Schema

Because of the enormity and complexity of the Core schema, the chapter describing it further subdivides its schema into six groupings:

- Configuration-related tables
- Call- and party-related tables
- Attached data-related tables
- Login- and session-related tables
- Service and dictionary-related tables
- Log tables

The schemas in each subdivision show the tables that comprise them with a clear background and the tables to which they join in other subdivisions with shaded backgrounds. The following descriptions of each subdivision may help you better understand IDB structure.

### Configuration-Related Tables

Configuration-related tables comprise the largest grouping of Core Schema tables. These tables store information, mostly derived from the Configuration Server database, that fall into two groups:

- Object tables, whose names are all prefixed by GC\_ and
- Object link tables, with table names beginning with GCX\_.

GCX\_ tables store information about the associations between configuration objects, such as the assignments of skills to agents (GCX\_SKILL\_LEVEL).

### Call- and Party-Related Tables

The group of call- and party-related tables provide detailed information about voice interactions that are registered by T-Server and the participants involved in those interactions. The principle tables in this group include:

- G\_CALL, containing information about completed and active call interactions.
- G\_PARTY, containing information about the parties involved in call interactions.
- G\_IR, containing information about data that is common to all calls in a scenario.
- G\_IS\_LINK, containing information about the various links in a multi-site configuration.
- G\_ROUTE\_RESULT, containing information about call routing results.

In addition, each of these tables has an historical counterpart that affixes \_HISTORY to the table name (for example, G\_CALL\_HISTORY, G\_PARTY\_HISTORY). Statistical tables for this group are stored in the G\_CALL\_STAT and G\_PARTY\_STAT tables.

### Attached Data-Related Tables

Six tables comprise the Attached Data grouping of the Core Schema. G\_SECURE\_USERDATA\_HISTORY stores information about attached data records that must be protected from unauthorized users whereas the records in G\_USERDATA\_HISTORY are open. In addition are the following four tables that store user data:

- G\_CALL\_USERDATA
- G\_CALL\_USERDATA\_CUST

- G\_CALL\_USERDATA\_CUST1
- G\_CALL\_USERDATA\_CUST2

## Login- and Session-Related Tables

The group of Login- and Session-related tables of the Core Schema provides detailed information about agent states, login sessions, associations between sessions and endpoints (DNs), reasons, and extensions. The principle tables in this group include:

- G\_LOGIN\_SESSION, containing information about agents' login sessions.
- GX\_SESSION\_ENDPOINT, containing information about the association between agent login sessions and endpoints.
- G\_AGENT\_STATE\_RC, containing information about reason codes for agent states.

In addition are two historical tables: G\_AGENT\_STATE\_HISTORY providing an audit trail of agent states within each session and G\_DND\_HISTORY providing this trail for do not disturb (DND) features occurring at a device.

## Service- and Dictionary-Related Tables

The group of Service- and Dictionary-related tables of the Core Schema are predominantly used to describe field values in other tables:

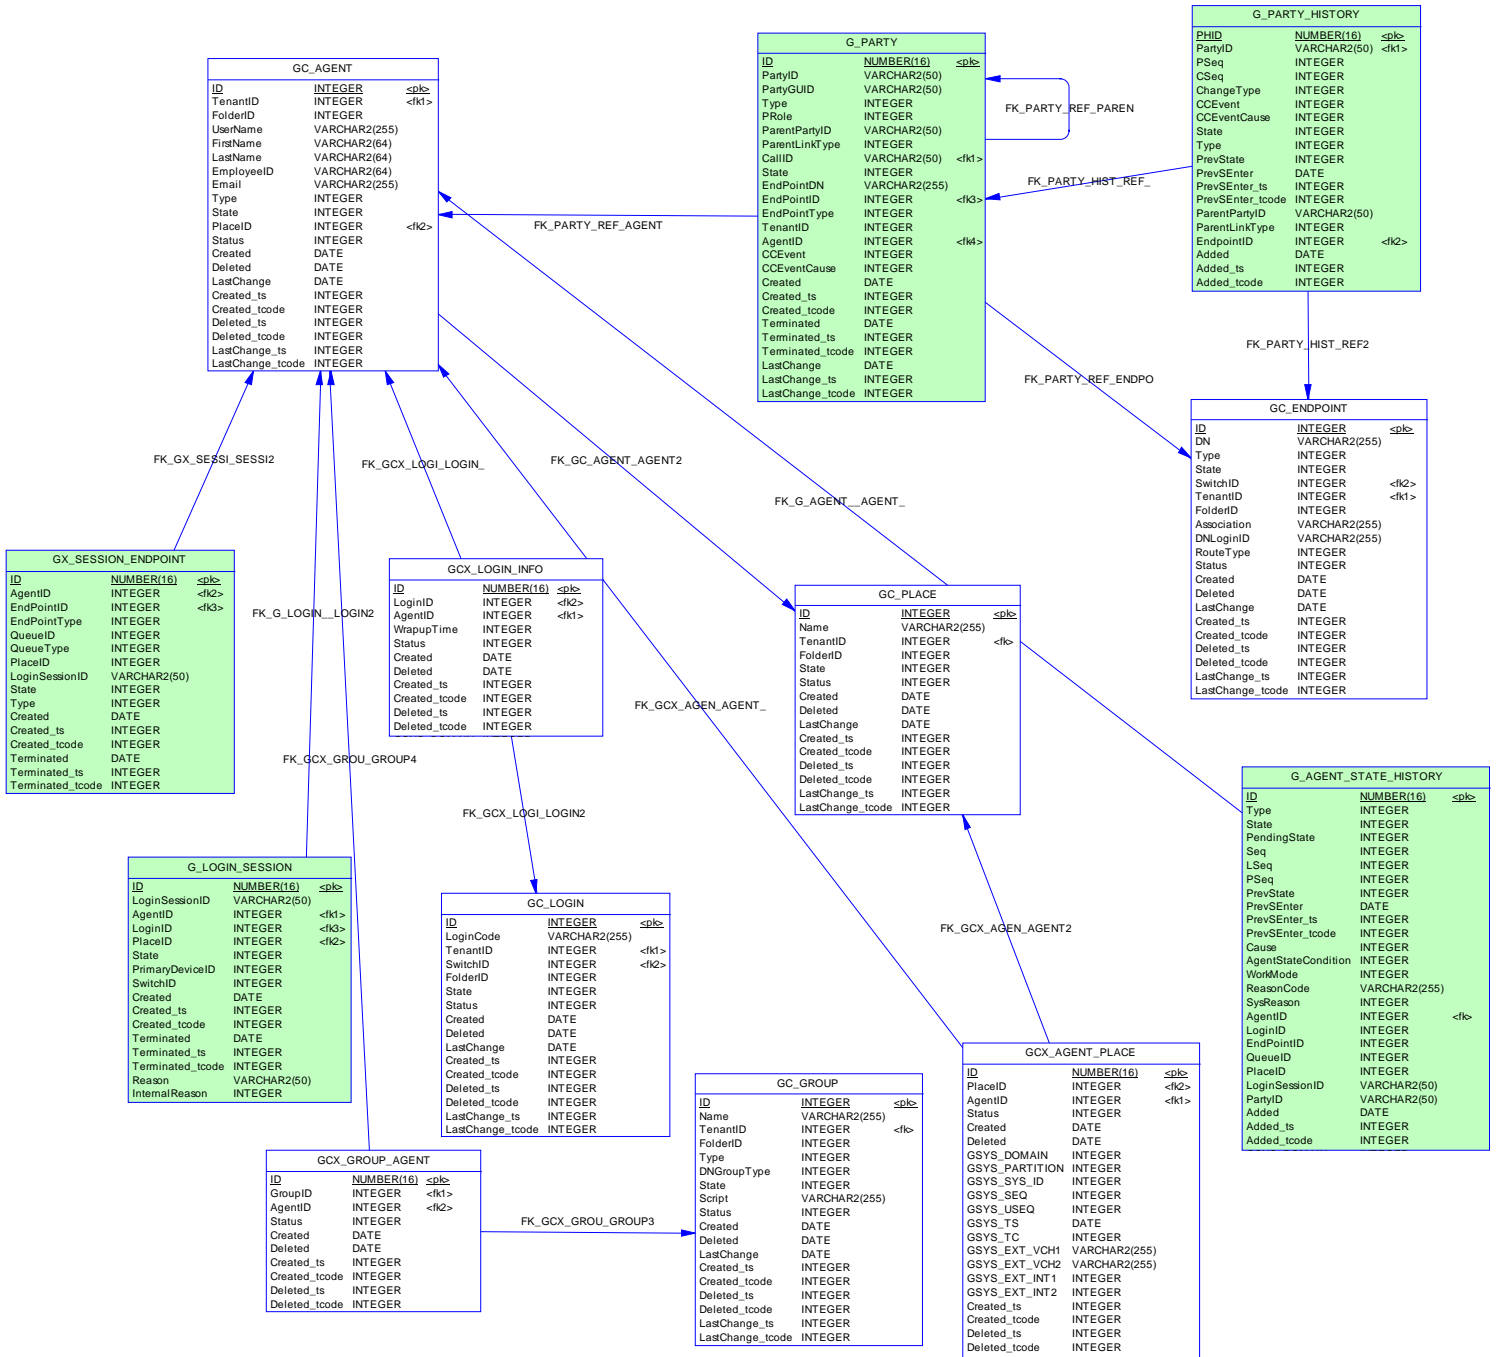

- G\_DICTIONARY and G\_DICT\_TYPE contain information for enumerator fields, such as the STATE, STATUS, and CAUSE fields found in several tables.
- G\_DB\_PARAMETERS contains general information about database schema, such as its version. IDB version is important to have when you are upgrading IDB.
- G\_HA\_CONTROL and G\_SYNC\_CONTROL are used by the ICON application to maintain synchronization.

## Log-Related Tables

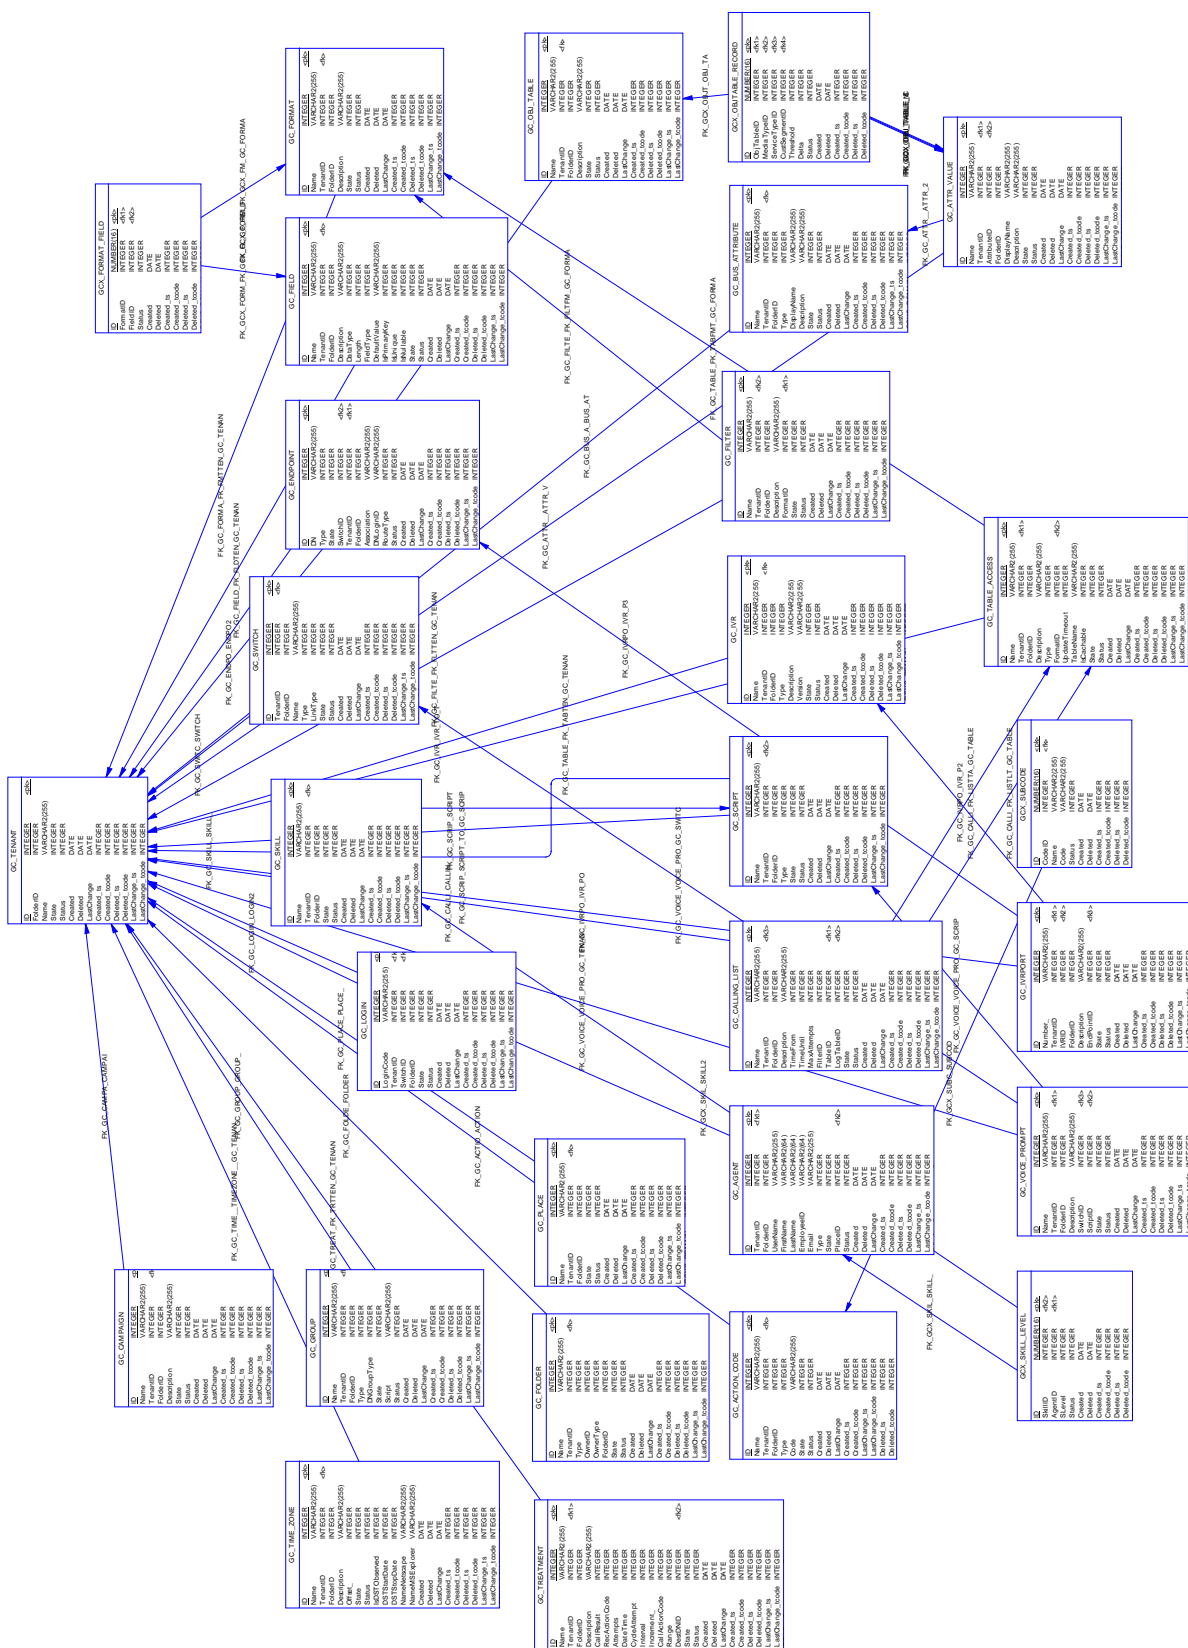

This grouping of tables of the Core Schema stores information about the success or failure of ICON functions and stored procedures.

### Column ID

The unique, autonumbered ID of the record. This is the primary key.

### Column PlaceID

The DBID of the Place object that is associated with AgentID (the agent).

### Column AgentID

The DBID of the Person object (the agent) that is associated with PlaceID (the place).

### Column Status

The status of the record. One of the following values:

0 - the status is unknown - Reserved for when ICON is unable to determine record status

1 - record is active

2 - record is inactive (object is deleted)

10 - synchronization is in the progress for an active record

#DICTIONARY TYPE 24

### Column Created

The GMT-equivalent date and time when the record was written to IDB. This is not necessarily the actual creation time of the record.

### Column Deleted

The GMT-equivalent date and time when this association was removed.

### Column Created\_ts

The UTC-equivalent value of the CREATED field.

### Column Created\_tcode

A reference, derived from the value in the CREATED\_TS field, to a record in the G\_TIMECODE table.

### Column Deleted\_ts

The UTC-equivalent value of the DELETED field.

### Column Deleted\_tcode

A reference, derived from the value in the DELETED\_TS field, to a record in the G\_TIMECODE table.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column GroupID

The DBID of the AgentGroup or PlaceGroup that is associated with CampaignID (the campaign).

### Column CampaignID

The DBID of the campaign that is associated with GroupID (the AgentGroup or PlaceGroup).

### Column Description

Free-format description

### Column CPDServerID

The DBID of the CPD Server Application that is associated with this record.

### Column IsActive

This is an indicator of whether the campaign on behalf to this group is active. It corresponds to the CfgFlag enumeration (Configuration Server). One of the following values:

0 - Unknown

1 - False

2 - True

#DICTIONARY TYPE 509

### Column DialMode

A dedicated dial mode for this group. It corresponds to the CfgDialMode enumeration (Configuration Server). One of the following values:

## 0 - Unknown Dialing Mode

- 1- Predictive
- 2- Progressive
- 3- Preview
- 4- Progressive with seizing
- 5- Predictive with seizing
- 6- Power
- 7- Power with seizing
- 8- Push Preview
- 9- Progress GVP
- 10- Predict GVP
- 11- Power GVP

## #DICTIONARY TYPE 521

### Column OrigDNID

A DBID of the DN from where the dialing should be performed.

### Column NumOfChannels

The maximum number of outbound channels that can be used by this group at one time.

### Column OperationMode

An operation mode. It corresponds to the CfgOperationMode enumeration (Configuration Server). One of the following values:

- 0 - Unknown Operation Mode
- 1 - Manual
- 2 - Scheduled

## #DICTIONARY TYPE 522

### Column MinRecSize

A record buffering parameter.

### Column OptRecSize

A record buffering parameter.

### Column OptMethod

An optimization method. It corresponds to the CfgOptimizationMethod enumeration (Configuration Server). One

of the following values:

- 0 - Unknown Optimization Criteria
- 1 - Agent Busy Factor
- 2 - Overdial Rate
- 3 - Average Waiting Time

#### #DICTIONARY TYPE 523

##### Column OptMethodValue

The value of the optimization method that is specified by optMethod property.

##### Column Status

The status of the record. One of the following values:

- 0 - the status is unknown - Reserved for when ICON is unable to determine record status
- 1 - record is active
- 2 - record is inactive (object is deleted)
- 10 - synchronization is in the progress for an active record

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column Name

The name of the object.

### Column Type

The type of Application. This corresponds to the CfgAppType enumeration (Configuration Server). Refer to the Appendix for a listing of permissible values.

#DICTIONARY TYPE 506

### Column FolderID

The DBID of the folder for the object.

### Column Version

Application version

### Column State

The object state. This corresponds to the CfgObjectState enumeration (Configuration Server).

0 - unknown - Reserved for when ICON is unable to determine object state.

1 - enabled

2 - disabled

#DICTIONARY TYPE 500

### Column Status

The status of the record. One of the following:

0 - the status is unknown - Reserved for when ICON is unable to determine record status

- 1 - record is active
- 2 - record is inactive (object is deleted)
- 10 - synchronization is in the progress for an active record

#### #DICTIONARY TYPE 24

##### Column Created

The GMT-equivalent date and time when the object was written to IDB. This is not necessarily the actual creation time of the object.

##### Column Deleted

The GMT-equivalent date and time when the object was removed.

##### Column LastChange

The GMT-equivalent date and time when the object was last changed (including object creation or removal).

##### Column Created\_ts

The UTC-equivalent value of the CREATED field.

##### Column Created\_tcode

A reference, derived from the value in the CREATED\_TS field, to a record in the G\_TIMECODE table.

##### Column Deleted\_ts

The UTC-equivalent value of the DELETED field.

##### Column Deleted\_tcode

A reference, derived from the value in the DELETED\_TS field, to a record in the G\_TIMECODE table.

##### Column LastChange\_ts

The UTC-equivalent value of the LASTCHANGE field.

##### Column LastChange\_tcode

A reference, derived from the value in the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

The unique, autonumbered ID of this record. This is the primary key.

### Column Name

The name of the object. This is a non-changeable system name.

### Column TenantID

The DBID of the Tenant to which this object belongs.

### Column AttributeID

The DBID of the Business Attribute (Enumerator) to which this Attribute Value belongs.

### Column FolderID

The DBID of the Folder for the object.

### Column DisplayName

The display name of the object. This value is changeable.

### Column Description

Free format description

### Column State

The object state. This corresponds to the CfgObjectState enumeration (Configuration Server). One of the following values:

0 - unknown - Reserved for when ICON is unable to determine object state.

1 - enabled

2 - disabled

The GMT-equivalent date and time when the object was last changed (including object creation or removal).

### Column Created\_ts

The UTC-equivalent value of the CREATED field.

**Column Created\_tcode**

A reference, derived from the value in the CREATED\_TS field, to a record in the G\_TIMECODE table.

**Column Deleted\_ts**

The UTC-equivalent value of the DELETED field.

**Column Deleted\_tcode**

A reference, derived from the value in the DELETED\_TS field, to a record in the G\_TIMECODE table.

**Column LastChange\_ts**

The UTC-equivalent value of the LASTCHANGE field.

**Column LastChange\_tcode**

A reference, derived from the value in the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column Name

The name of the calling list object.

### Column TenantID

The DBID of the Tenant to which this object belongs.

### Column FolderID

The DBID of the Folder for the object.

### Column Description

Free format description

### Column TimeFrom

The earliest time when a dial can be performed

### Column TimeUntil

The latest time when a dial can be performed.

### Column MaxAttempts

The maximum number of attempts that a single record can be dialed for one campaign.

### Column FilterID

The DBID of the Filter for this Calling List.

### Column TableID

The DBID of the Table Access to which the Calling List refers.

### Column LogTableID

The DBID of the Table Access (LogTable type) to which the Calling List refers.

### Column State

The object state. This corresponds to the CfgObjectState enumeration (Configuration Server). One of the following values:

0 - unknown - Reserved for when ICON is unable to determine object state.

- 1 - enabled
- 2 - disabled

## #DICTIONARY TYPE 500

Free format description

### Column DataType

The data type of field in the database. This corresponds to CfgDataType enumeration in Configuration Server. One of the following values:

0 - Unknown Data Type

1 - int

2 - float

3 - char

4 - varchar

5 - datetime

### #DICTIONARY TYPE 516

### Column Length

Length of field in the database

### Column FieldType

The type of the Field corresponding to the CfgFieldType enumeration in Configuration Server. Refer to the Appendix for a complete listing of permissible values.

## #DICTIONARY TYPE 517

### Column DefaultValue

The default value of the Field.

### Column IsPrimaryKey

A flag which indicates whether a field is used as primary key. This corresponds to the CfgFlag enumeration in Configuration Server.

0 - unknown

1 - false - field is not used as a primary key

2 - true - field is used as a primary key

## #DICTIONARY TYPE 509

### Column IsUnique

A flag which indicates whether a field is unique. This corresponds to the CfgFlag enumeration in Configuration Server. One of the following values:

0 - unknown

1 - false - field is not unique

2 - true - field is unique

## #DICTIONARY TYPE 509

### Column IsNullable

A flag which indicates whether a field allows null values. This corresponds to the CfgFlag enumeration in Configuration Server. One of the following values

0 - unknown

1 - false - field does not allow null values

2 - true - field does allow null values

## #DICTIONARY TYPE 509

### Column Created

The GMT-equivalent date and time when the object was written to IDB. This is not necessarily the actual creation time of the object.

### Column Deleted

The GMT-equivalent date and time when the object was removed.

### Column LastChange

The GMT-equivalent date and time when the object was last changed (including object creation or removal).

**Column Created\_ts**

The UTC-equivalent value of the CREATED field.

**Column Created\_tcode**

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

**Column Deleted\_ts**

The UTC-equivalent value of the DELETED field.

**Column Deleted\_tcode**

A reference, derived from the value of the DELETED\_TS field, to a record in the G\_TIMECODE table.

**Column LastChange\_ts**

The UTC-equivalent value of the LASTCHANGE field.

**Column LastChange\_tcode**

A reference, derived from the value of the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

**Table GC\_FOLDER**

This table stores information about the configuration of Folder objects.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column Name

The name of the object.

### Column TenantID

The DBID of the Tenant to which this object belongs.

### Column Type

The type of the Folder. This corresponds to the CfgObjectType enumeration (Configuration Server). Refer to the Appendix for a complete listing of permissible values.

#DICTIONARY TYPE 528

### Column OwnerID

The DBID of the owner object (Tenant, Switch, IVR, Business Attribute) of the folder.

### Column OwnerType

Type of the owner of the Folder. This corresponds to the CfgObjectType enumeration in Configuration Server. Refer to the Appendix for a complete listing of permissible values.

# DICTIONARY TYPE 528

### Column FolderID

The DBID of the folder for the object.

### Column State

The object state. This corresponds to the CfgObjectState enumeration (Configuration Server). One of the following values:

0 - unknown - Reserved for when ICON is unable to determine object state.

1 - enabled

2 - disabled

#### #DICTIONARY TYPE 500

##### Column Status

The status of the record. One of the following:

0 - the status is unknown - Reserved for when ICON is unable to determine record status

1 - record is active

2 - record is inactive (object is deleted)

10 - synchronization is in the progress for an active record

#### # DICTIONARY TYPE 24

##### Column Created

The GMT-equivalent date and time when the object was written to IDB. This is not necessarily the actual creation time of the object.

##### Column Deleted

The GMT-equivalent date and time when the object was removed.

##### Column LastChange

The GMT-equivalent date and time when the object was last changed (including object creation or removal).

##### Column Created\_ts

The UTC-equivalent value of the CREATED field.

##### Column Created\_tcode

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

##### Column Deleted\_ts

The UTC-equivalent value of the DELETED field.

##### Column Deleted\_tcode

A reference, derived from the value of the DELETED\_TS field, to a record in the G\_TIMECODE table.

### Column LastChange\_ts

The UTC-equivalent value of the LAST\_CHANGE field.

### Column LastChange\_tcode

A reference, derived from the value of the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

## Table GC\_FORMAT

This table stores configuration information about Format objects.

### Column LastChange

The GMT-equivalent date and time when the object was last changed (including object creation or removal).

**Column Created\_ts**

The UTC-equivalent value of the CREATED field.

**Column Created\_tcode**

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

**Column Deleted\_ts**

The UTC-equivalent value of the DELETED field.

**Column Deleted\_tcode**

A reference, derived from the value of the DELETED\_TS field, to a record in the G\_TIMECODE table.

**Column LastChange\_ts**

The UTC-equivalent value of the LASTCHANGE field.

**Column LastChange\_tcode**

A reference, derived from the value of the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

**Table GC\_GROUP**

This table stores information about agent group, place group, and DN group configuration objects.

### Column ID

The auto-generated record ID.

### Column Name

The name of the object.

### Column TenantID

The DBID of the Tenant to which this object belongs.

### Column FolderID

The DBID of the Folder for the object.

### Column Type

The type of the Group corresponding to the CfgGroupType enumeration in Configuration Server. One of the following values:

0 - Unknown Group Type

1 - Agent Group

2 - Place Group

3 - DN Group

4 - Access Group

### #DICTIONARY TYPE 540

### Column DNGroupType

The type of DN Group corresponding to the CfgDNGroupType enumeration in Configuration Server. This is applicable only to DN group records. One of the following values:

0 - Unknown Group Type

1 - Single Ports

2 - ACD Queues

3 - Routing Points

4 - Network Ports

5 - Service Numbers

#DICTIONARY TYPE 508

### Column State

The object state corresponding to the CfgObjectState enumeration in Configuration Server. One of the following values:

0 - unknown - Reserved for when ICON is unable to determine object state.

1 - enabled

2 - disabled

#DICTIONARY TYPE 500

### Column Script

The Virtual Agent Group script expression. This is applicable only to Agent Group objects.

### Column Status

The status of the record. One of the following values:

0 - the status is unknown - Reserved for when ICON is unable to determine record status

1 - record is active

2 - record is inactive (object is deleted)

10 - synchronization is in the progress for an active record

### Column Deleted

The GMT-equivalent date and time when this object was removed.

### Column LastChange

The GMT-equivalent date and time when the object was last changed (including object creation or removal).

**Column Created\_ts**

The UTC-equivalent value of the CREATED field.

**Column Created\_tcode**

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

**Column Deleted\_ts**

The UTC-equivalent value of the DELETED field.

**Column Deleted\_tcode**

A reference, derived from the value of the DELETED\_TS field, to a record in the G\_TIMECODE table.

**Column LastChange\_ts**

The UTC-equivalent value of the LASTCHANGE field.

**Column LastChange\_tcode**

A reference, derived from the value of the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

**Table GC\_IVR**

This table stores information about the configuration of the IVR objects.

## Column Status

The status of the object described by the record. One of the following values:

- 0 - the status is unknown - Reserved for when ICON is unable to determine record status
- 1 - record is active
- 2 - record is inactive (object is deleted)
- 10 - synchronization is in the progress for an active record

#DICTIONARY TYPE 24

## Column Created

The GMT-equivalent date and time when the object was written to IDB. This is not necessarily the actual creation time of the object.

## Column Deleted

The GMT-equivalent date and time when the object was removed.

## Column LastChange

The GMT-equivalent date and time when the object was last changed (including object creation or removal).

## Column Created\_ts

The UTC-equivalent value of the CREATED field.

## Column Created\_tcode

A reference, derived from the CREATED\_TS field, to a record in the G\_TIMECODE table.

## Column Deleted\_ts

The UTC-equivalent value of the DELETED field.

## Column Deleted\_tcode

A reference, derived from the DELETED\_TS field, to a record in the G\_TIMECODE table.

## Column LastChange\_ts

The UTC-equivalent value of the LASTCHANGE field.

## Column LastChange\_tcode

A reference, derived from the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

## Table GC\_SCRIPT

This table stores configuration information about Script objects.

The GMT-equivalent date and time when the object was last changed (including object creation or removal).

### Column Created\_ts

The UTC-equivalent value of the CREATED field.

### Column Created\_tcode

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

**Column Deleted\_ts**

The UTC-equivalent value of the DELETED field.

**Column Deleted\_tcode**

A reference, derived from the value of the DELETED\_TS field, to a record in the G\_TIMECODE table.

**Column LastChange\_ts**

The UTC-equivalent value of the LASTCHANGE field.

**Column LastChange\_tcode**

A reference, derived from the value of the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

## Column ID

The unique, auto-generated ID of this record. This is the primary key.

## Column Name

The name of the object.

### Column TenantID

The DBID of the Tenant to which this object belongs.

### Column FolderID

The DBID of the Folder for the object.

### Column Description

Free format description

### Column Type

The type of the Switch. This corresponds to the CfgSwitchType enumeration in Configuration Server. Refer to the Appendix for a listing of permissible values.

#DICTIONARY TYPE 501

### Column FormatID

The DBID of the Format for this Table Access.

### Column UpdateTimeout

A timeout, in seconds, between updates of table data in the application memory partition.

### Column TableName

The name of the table in the database.

### Column IsCachable

An indicator of whether or not the table data is mirrored in the application memory partition. Corresponds to the CfgFlag enumeration in Configuration Server. One of the following values:

0 - Unknown

1 - True

2 - False

#DICTIONARY TYPE 509

### Column State

The object state. This corresponds to the CfgObjectState enumeration in Configuration Server. One of the following values:

0 - unknown - Reserved for when ICON is unable to determine object state.

1 - enabled

2 - disabled

#DICTIONARY TYPE 500

### Column Status

The status of the object described by the record. One of the following values:

0 - the status is unknown - Reserved for when ICON is unable to determine record status

The GMT-equivalent date and time when the object was last changed (including object creation or removal).

### Column Created\_ts

The UTC-equivalent value of the CREATED field.

### Column Created\_tcode

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

### Column Deleted\_ts

The UTC-equivalent value of the DELETED field.

### Column Deleted\_tcode

A reference, derived from the value of the DELETED\_TS field, to a record in the G\_TIMECODE table.

### Column LastChange\_ts

The UTC-equivalent value of the LASTCHANGE field.

## Column LastChange\_tcode

A reference, derived from the value of the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

## Table GC\_TENANT

The table stores information about Tenant configuration objects.

10 - synchronization is in the progress for an active record

#DICTIONARY TYPE 24

### Column IsDSTObserved

A flag indicating whether Daylight Savings Time (DST) is observed for your Time Zone. This corresponds to the CfgFlag enumeration type in Configuration Server. One of the following values:

0 - Unknown

1 - True

2 - False

#### #DICTIONARY TYPE 509

##### Column DSTStartDate

The start date and time for DST.

##### Column DSTStopDate

The stop date and time for DST.

##### Column NameNetscape

The Netscape Internet Browser name for the Time Zone.

##### Column NameMSExplorer

The Microsoft Internet Explorer name for the time zone.

##### Column Created

The GMT-equivalent date and time when the object was written to IDB. This is not necessarily the actual creation time of the object.

### Column TenantID

The DBID of the Tenant to which this object belongs.

### Column FolderID

The DBID of the Folder for the object.

### Column Description

Free format description

### Column CallResult

The call result related to this treatment. This corresponds to the GctiCallState enumeration in Configuration Server. Refer to the Appendix for a listing of permissible values.

#DICTIONARY TYPE 518

### Column RecActionCode

The record action code. Corresponds to the CfgRecActionCode enumeration in Configuration Server. One of the following values:

- 0 - Unknown Action
- 1 - No Treatment
- 2 - Update all records in chain
- 3 - Redial
- 4 - Retry in
- 5 - Retry at specified date
- 6 - Next in chain
- 7 - Next in chain after
- 8 - Next in chain at specified date
- 9 - Assign to Group
- 10 - Mark as Agent Error

## 11 - Reschedule

### #DICTIONARY TYPE 519

#### Column Attempts

The attempt number to which the action should be performed.

#### Column DateTime

The GMT-equivalent date and time when another attempt must be applied to a DN.

#### Column CycleAttempt

The maximum number of sequential attempts for which the treatment can be applied to a DN.

#### Column Interval

The time interval, in minutes, between attempts.

#### Column Increment\_

The time in interval, in minutes, before the next treatment attempt.

#### Column CallActionCode

The call action code. This corresponds to the CfgCallActionCode enumeration in Configuration Server. One of the following values:

0 - Unknown Action Code

1 - Connect

2 - Drop

3 - Mute Transfer

4 - Transfer

5 - Route

6 - Play a message

7 - Send a fax

8 - Send a page

9 - Send an e-mail

### #DICTIONARY TYPE 520

#### Column Range

The parameter that defines a time range.

### Column DestDNID

The DBID of the DN to which the call with this call result will be forwarded or routed.

### Column State

The object state. This corresponds to the CfgObjectState enumeration in Configuration Server. One of the following values:

0 - unknown - Reserved for when ICON is unable to determine object state.

1 - enabled

2 - disabled

#DICTIONARY TYPE 500

### Column Status

The status of the record. One of the following values:

0 - the status is unknown - Reserved for when ICON is unable to determine record status

1 - record is active

2 - record is inactive (object is deleted)

10 - synchronization is in the progress for an active record

#DICTIONARY TYPE 24

### Column Created

The GMT-equivalent date and time when the object was written to IDB. This is not necessarily the actual creation time of the object.

### Column Deleted

The GMT-equivalent date and time when this object was removed.

### Column LastChange

The GMT-equivalent date and time when the object was last changed (including object creation or removal).

### Column Created\_ts

The UTC-equivalent value of the CREATED field.

### Column Created\_tcode

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

**Column Deleted\_ts**

The UTC-equivalent value of the DELETED field.

**Column Deleted\_tcode**

A reference, derived from the value of the DELETED\_TS field, to a record in the G\_TIMECODE table.

**Column LastChange\_ts**

The UTC-equivalent value of the LASTCHANGE field.

**Column LastChange\_tcode**

A reference, derived from the value of the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

**Table GC\_VOICE\_PROMPT**

This table stores information about the configuration of Configuration Voice Prompt objects.

**Column ID**

The auto-generated record ID.

**Column Name**

The name of the object.

**Column TenantID**

The DBID of the Tenant to which this object belongs.

**Column FolderID**

The DBID of the Folder for the object.

**Column Description**

Free format description

**Column SwitchID**

The DBID of the Switch to which this VoicePrompt is dedicated.

**Column ScriptID**

The DBID of the Script that is assigned to this Voice Prompt.

**Column State**

The object state. This corresponds to the CfgObjectState enumeration in Configuration Server. One of the following values:

0 - unknown - Reserved for when ICON is unable to determine object state.

1 - enabled

2 - disabled

**#DICTIONARY TYPE 500****Column Status**

The status of the object described by the record. One of the following values:

0 - the status is unknown - Reserved for when ICON is unable to determine record status

1 - record is active

2 - record is inactive (object is deleted)

10 - synchronization is in the progress for an active record

## #DICTIONARY TYPE 24

### Column Created

The GMT-equivalent date and time when the object was written to IDB. This is not necessarily the actual creation time of the object.

### Column Deleted

The GMT-equivalent date and time when the object was removed.

### Column LastChange

The GMT-equivalent date and time when the object was last changed (including object creation or removal).

### Column Created\_ts

The UTC-equivalent value of the CREATED field.

### Column Created\_tcode

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

### Column Deleted\_ts

The UTC-equivalent value of the DELETED field.

### Column Deleted\_tcode

A reference, derived from the value of the DELETED\_TS field, to a record in the G\_TIMECODE table.

### Column LastChange\_ts

The UTC-equivalent value of the LASTCHANGE field.

### Column LastChange\_tcode

A reference, derived from the value of the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

## Table GSYS\_DNPRemoteLocation

This table contains information about the remote locations involved in an interaction. The presence of a record in this table indicates that the G\_IS\_LINK table in this database will not contain information about the linked part of the association (no pair). The merge stored procedure uses this information to determine whether or not to expect to receive additional information about the interaction on the other end of the IS-LINK.

## Column List

Name	Code	Data Type	P	M	F	AN
ID RemoteLocation	ID REMOTELocation	NUMBER(6) VARCHAR2(255)		X		

### Column ID

The unique ID of this record. For DB2 and Microsoft SQL Server, this field is auto-generated by the DBMS. For Oracle, you must provide a unique ID.

### Column RemoteLocation

The name of the remote switch whose interaction handling is not recorded in this IDB.

## Table GSYS\_SYSPROCINFO

This is an internal table exclusively for ICON use. Please do not modify records in this table or this table's structure.

## Column List

Name	Code	Data Type	P	M	F	AN

### Column DOMAINID

Reserved for internal use.

### Column PRIMARYID

Reserved for internal use.

### Column PROVIDERTAG

The ID of the provider class. One of the following values:

0 - unknown - Reserved

1 - gcc - Call control information provider

2 - gls - Login session information provider

3 - gud - User data information provider

4 - gos - Outbound extensions information provider

5 - cfg - Configuration information provider

6 - vq - Virtual queue information provider

## #DICTIONARY TYPE 26

Column TRANSACTION\_ID

Reserved for internal use.

Column TRANSACTION\_TS

Reserved for internal use.

Column SEQPROCESSED

Reserved for internal use.

Column PROCNAME

Reserved for internal use.

## Table GS\_AGENT\_STAT

This table contains the duration of agent state metrics. The unique identifier of the record is the combination of the LoginSessionID, EndPointID, and QueueID fields. Whether ICON writes to this table is determined by the setting of one or more configuration options in the [filter-data] section.

## Column List

GSYS_EXT_INT2	GSYS_EXT_INT2	INTEGER				

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column LoginSessionID

The agent's login session ID (GUID). Same as G\_LOGIN\_SESSION.LOGINSESSIONID.

### Column EndPointID

The DBID of the agent's endpoint (DN) configuration object. This value is 0 for interactions originating from Interaction Server.

### Column QueueID

The DBID of the queue (ACDQ) configuration object in Configuration Server. This value is 0 for interactions originating from Interaction Server.

### Column AgentID

The DBID of the agent (Person) configuration object in Configuration Server. This value is 0 if a Person object is not configured.

### Column Duration\_Ready

The duration of the agent's ready state, in seconds, during the agent's login session.

### Column DurationNotReady

The duration of the agent's notready state, in seconds, during the agent's login session.

### Column DurationACW

The duration of the agent's ACW state, in seconds, during the agent's login session.

### Column DurationBusy

The duration of the agent's busy state, in seconds, during the agent's login session.

### Column LastChange

The GMT-equivalent date and time when the record was created or updated. This is taken from the T-Server event that generates the update for this metric. If the update of the agent's metrics during login session is disabled, this value will always hold the same value as that in the ADDED field.

### Column LastChange\_ts

The UTC-equivalent value of the LASTCHANGE field.

### Column LastChange\_tcode

A reference, derived from the value in the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

### Column Added

The GMT-equivalent date and time when the record was inserted. This is taken from the last event related to the agent's login session.

### Column Added\_ts

The UTC-equivalent value of the ADDED field.

### Column Added\_tcode

A reference, derived from the value in the ADDED\_TS field, to a record in the G\_TIMECODE table.

## Index List

### Column ID

The unique, autonumbered ID of this record.

### Column LoginSessionID

The agent's login session ID (GUID). Same as G\_LOGIN\_SESSION.LOGINSESSIONID.

### Column EndPointID

The DBID of the agent's endpoint (DN) configuration object in Configuration Server. This value is 0 for interactions originating from Interaction Server.

### Column QueueID

The DBID of the queue (ACDQ) configuration object in Configuration Server. This value is 0 for interactions originating from Interaction Server.

### Column AgentID

The DBID of the agent (person) configuration object in Configuration Server. This value is 0 if a Person object is not configured.

### Column State

The Agent's state: Login, ready, notready, ACW, or busy.

### Column Duration\_UNKNOWN

The duration of the agent's state during the agent's login session with a workmode of UNKNOWN.

### Column Duration\_AUX

The duration of the agent's state during the agent's login session with a workmode of AuxWork.

### Column Duration\_LegalGuard

The duration of the agent's state during the agent's login session with a workmode of LegalGuard.

**Column Duration\_GoAway**

The duration of the agent's state during the agent's login session with a workmode of Goaway.

**Column Duration\_ReturnBack**

The duration of the agent's state during the agent's login session with a workmode of returnback.

**Column LastChange**

The GMT-equivalent date and time when the record was created or updated. This value is taken from the T-Server event that produces the update of this metric. If the update of the agent's metrics during login session is disabled, then this value will be the same as that in the ADDED field.

**Column LastChange\_ts**

The UTC-equivalent value of the LASTCHANGE field.

**Column LastChange\_tcode**

A reference, derived from the value of the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

**Column Added**

The GMT-equivalent date and time when the record was inserted. This value is taken from the last T-Server event related to the agent's login session.

**Column Added\_ts**

The UTC-equivalent value of the ADDED field.

**Column Added\_tcode**

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

**Index List**

GSYS_EXT_INT2	GSYS_EXT_INT2	INTEGER				

### Column ID

The unique, autonumbered ID of the record. This is the primary key.

### Column AgentID

The DBID of the agent (Person) configuration object. This always has the same value as in the related record in the G\_LOGIN\_SESSION table.

### Column EndPointID

The DBID of the agent's endpoint (DN) configuration object in Configuration Server. This value is 0 for interactions originating from Interaction Server.

### Column EndPointType

The type of the endpoint (DN), as specified in Configuration Server. This value is 0 for interactions originating from Interaction Server.

### Column QueueID

If the association between the agent's DN and a particular queue (ACDQ) is detected, then this field contains the DBID of the Queue (DN with type ACDQ) configuration object. This value is 0 for interactions originating from Interaction Server.

### Column QueueType

The type of the Queue (DN), as specified in Configuration Server. This field is not applicable 0 for interactions originating from Interaction Server.

### Column PlaceID

The DBID of the Place configuration object in Configuration Server, if a Place object is configured.

### Column LoginSessionID

The agent's login session ID (GUID). The same value as stored in G\_LOGIN\_SESSION.LOGINSESSIONID.

### Column State

The state of the association between the Endpoint and the Queue, in the agent's login session. May be active or terminated. If the agent logs out from a queue, with the login session not yet finished, then just the record related to the queue will be marked as terminated. One of the following values:

0 - terminated

1 - active

#DICTIONARY TYPE 82

### Column Type

The type of the record. One of the following values:

1 - agent\_dn - the record was added without information about queue

2 - queue - the record was added with queue specified

3 - media - the record was added with specified media

#DICTIONARY TYPE 12

### Column Created

The GMT-equivalent date and time when the association between endpoint (or endpoint and queue) and the agent's login session is detected.

### Column Created\_ts

The UTC-equivalent value of the CREATED field.

### Column Created\_tcode

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

## Column Terminated

The GMT-equivalent date and time when the record was terminated; that is, the date and time when the association no longer exists.

## Column Terminated\_ts

The UTC-equivalent value of the TERMINATED field.

## Column Terminated\_tcode

A reference, derived from the value of the TERMINATED\_TS field, to a record in the G\_TIMECODE table.

## Index List

Code	U	C	Table
IDX_SN_ENDP_AGID			GX_SESSION_ENDPOINT
IDX_SN_ENDP_LSEP			GX_SESSION_ENDPOINT

## Table G\_AGENT\_STATE\_HISTORY

This table contains detailed information about state changes during the agent's login session. The records inserted into this table include:

- changes to the agent's state.
- changes to the agent's pending state.
- changes to the agent's workmode.
- changes to the agent's hardware reason code.
- indication that the agent connected to a call.
- indication the agent disconnected from a call.

The setting of the gls-enable-acw-busy and gls-acw-first configuration options may affect the values of certain fields in this table. The setting of configuration options in the [filter-data] section may also impact records in this table. Refer to the *Interaction Concentrator 7.6 User's Guide* for a description of the gls-enable options and those options available in the [filter-data] section.

## Column ID

The unique, autonumbered ID of the record. This is the primary key.

## Column Type

The type of the record. One of the following values:

-1 - unknown

0 - normal - Reserved

5 - state - records of this type track changes of agent's state

6 - pending\_state - records of this type track changes of agent's pending state(when agent's state remains the same)

7 - add\_party - records of this type track addition(one by one) of parties connected with the agent (at least one party is already connected)

8 - rem\_party - records of this type track removal(one by one) of parties connected with the agent (at least one party is still connected)

9 - state\_forced - records of this type track changes of agent's state that were forced by information received for another device

10 - pending\_forced - records of this type track changes of agent's pending state that were forced by information received for another device

11 - reason - records of this type track changes of agent's workmode (when agent's state remains the same)

12 - reason\_code - records of this type track changes of reason codes of agent's state(when agent's state and workmode remain the same)

#### #DICTIONARY TYPE 13

##### Column State

The state of the agent on the device (endpointid) against a queue (queueid), or the previous state in G\_AGENT\_STATE\_HISTORY table. One of the following values:

0 - null - agent is logged off

1 - login - agent is logged in, but no information whether the agent is ready to receive calls

2 - notready - agent is not ready to receive calls

3 - ready - agent is ready to receive calls

4 - acw - agent is in after call work state

5 - busy - agent is on the call

6 - unknown - agent's login session is present, but ICON has no information about agent's state (due to disconnect from t-server, etc)

#### #DICTIONARY TYPE 16

##### Column PendingState

The pending state of the agent (if known). The agent's state will be changed to this state after the current state finishes. One of the following values:

0 - null - No pending state at the time

2 - notready - Not ready

3 - ready - Ready

4 - acw - After call work

#### #DICTIONARY TYPE 17

##### Column Seq

The sequence number of the state changes record. Each time that an agent's state on a device changed (against queue, if specified), this field has the next value.

##### Column LSeq

The sequence number of the record within the a given login session.

##### Column PSeq

The sequence number of the record within the same state. If a pending state changed, this field has the next value.

Records that reflect state changes have 0 in this field. Records that reflect pending state changes have a non-zero value in this field.

#### Column PrevState

State of the agent on device (endpointid) against queue (queueid), or previous state in G\_AGENT\_STATE\_HISTORY table. One of the following values:

- 0 - null - agent is logged off
- 1 - login - agent is logged in, but no information whether the agent is ready to receive calls
- 2 - notready - agent is not ready to receive calls
- 3 - ready - agent is ready to receive calls
- 4 - acw - agent is in after call work state
- 5 - busy - agent is on the call
- 6 - unknown - agent's login session is present, but ICON has no information about agent's state (due to disconnect from t-server, etc)

#DICTIONARY TYPE 16

#### Column PrevSEnter

The GMT-equivalent date and time when the previous agent state was detected.

#### Column PrevSEnter\_ts

The UTC-equivalent value of the PREVSEnter field.

#### Column PrevSEnter\_tcode

A reference, derived from the value of the PREVSEnter\_TS field, to a record in the G\_TIMECODE table.

#### Column Cause

The cause of creation of the record

- 0 - nocause - No cause - reserved for future use
- 1 - normal - the record was added as result of a t-event that was received for the endpoint specified in the record
- 2 - forced\_pause - Reserved
- 3 - forced\_transition - the record was added to reflect changes in the agent's state (for example: pending state or workmode) that were forced by information received for another endpoint, or that resulted from information taken from the pending state
- 4 - autowork - after call work has started

#DICTIONARY TYPE 14

### Column AgentStateCondition

Additional, detailed information regarding the forced state change. One of the following values:

- 0 - nocondition - Reserved
- 1 - normal - the state change was not forced
- 2 - forced\_by\_another\_device - the state change was forced by another device
- 3 - forced\_by\_pending\_state - the state change was forced by pending state
- 4 - forced\_by\_connection\_info - the state change was forced by information in EventRegistered or was a result of disconnection from T-Server

### #DICTIONARY TYPE 15

### Column WorkMode

The workmode of the agent state as reported by T-Server. One of the following values:

- 0 - unknown - Reserved for cases when ICON and/or T-Server is unable to determine WORKMODE
- 1 - manualin - (AgentManualIn) the agent has to perform a manual operation to become available
- 2 - autoin - (AgentAutoIn) the switch's control system decides agent availability
- 3 - aftercallwork - (AfterCallWork) the state where a device, on behalf of an agent, is no longer involved with an ACD call. While in this state, the agent is performing administrative duties for a previous call and cannot receive further calls from the ACD
- 4 - auxwork - (AgentAuxWork) auxiliary work, the agent is not ready to receive calls (specific to the G3 switch only)
- 6 - walkaway - (Walk Away) the state where an agent is logged in to an ACD group, but is understood not to be at his station, and thus not prepared to handle calls that the ACD distributes
- 7 - returnback - (AgentReturnBack) the agent has indicated his return to the agent workstation (only used for transition from Walk Away state)

### #DICTIONARY TYPE 18

### Column ReasonCode

The hardware reason code value (switch reason code) by the value of the key ReasonCode in the Extensions section.

### Column SysReason

The system reason. An internal ICON reason to create a record.

### Column AgentID

The DBID of the agent (person) configuration object.

**Column LoginID**

The DBID of the Login (the AgentID in the configuration database) on the switch.

**Column EndPointID**

The DBID of the agent's endpoint (DN) configuration object in Configuration Server.

**Column QueueID**

The DBID of the queue (ACDQ) configuration object in CME, where the agent logged in. A value of 0 (zero) indicates that no queue is specified for this record.

**Column PlaceID**

The DBID of the place configuration object (if configured). This is the place where the agent logged in.

**Column LoginSessionID**

The ID (GUID) of the agent's login session. Refer to the record in G\_LOGIN\_SESSION.

**Column PartyID**

The PartyID (GUID) of the party that is related to the record. Refer to G\_PARTY. The PartyID can be either the party that connected with the agent or the party for the detected ACW state.

**Column Added**

The GMT-equivalent date and time when information about an agent's change of agent's state was detected.

**Column Added\_ts**

The UTC-equivalent value of the ADDED field.

**Column Added\_tcode**

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

**Table G\_AGENT\_STATE\_RC**

The agent states reason codes. Records are inserted when either a hardware or software reason code finishes on an agent's state. Whether ICON writes to this table is determined by the setting of one or more configuration options in the [filter-data] section.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column SessionID

The ID (GUID) of the agent's login session. Refer to the corresponding record in G\_LOGIN\_SESSION.

### Column EndPointID

The DBID of the Endpoint. This value is 0 for interactions originating from Interaction Server.

### Column QueueID

The DBID of the Queue configuration object where the agent logged in. This value is 0 for interactions originating from Interaction Server.

### Column AgentState

The agent state provided by the reason code. Refer to the G\_AGENT\_STATE\_HISTORY table.

### Column WorkMode

The workmode of the Agent state provided by the reason code.

### Column HWFlag

This flag indicates whether the reason code is hardware or software. One of the following values:

0 - false - it is a software reason

1 - true - it is a hardware reason

### #DICTIONARY TYPE 83

### Column KeyName

The key of the reason code. This always has a value of ReasonCode for a hardware reason code. It contains the full path to the key for a software reason code.

### Column Value

Value of the reason code.

### Column LSeq

The sequence number of the Agent state change within an Agent Login Session. It has the same value as the related record in the G\_AGENT\_STATE\_HISTORY table.

### Column FSeq

Reserved for future use.

### Column Seq

The sequence number of the reason code record within a login session.

### Column Created

The GMT-equivalent date and time when the reason code was detected.

### Column Created\_ts

The UTC-equivalent value of the CREATED field.

### Column Created\_tcode

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

### Column Terminated

The GMT-equivalent date and time when the finish of the reason code was detected.

## Column Terminated\_ts

The UTC-equivalent value of the TERMINATED field.

## Column Terminated\_tcode

A reference, derived from the value of the TERMINATED\_TS field, to a record in the G\_TIMECODE table.

## Table G\_CALL

This table contains information regarding the latest state of the interaction, according to information received from either the T-Server or Interaction Server applications.

## Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column CallID

The unique ID of the interaction. The lxnGUID.

### Column ParentCallID

The ID of the parent interaction. This is primary call UUID for consultation call interactions.

### Column MergeCallID

The actual call UUID of a target call, in a conference or a transfer interaction. This value may differ from that in the ParentCallID field. This value will be unspecified for multimedia interactions.

### Column MergeType

The type of the link between this interaction and the parent interaction. This value will be unspecified for multimedia interactions. One of the following values:

- 1 - unknown
- 0 - bridged
- 1 - connection\_cleared
- 2 - delivered
- 3 - established
- 4 - failed
- 5 - held
- 6 - offered
- 7 - originated
- 8 - queued
- 9 - retrieved
- 10 - service\_initiated
- 11 - transferred
- 12 - conferenced
- 13 - diverted

### #DICTIONARY TYPE 30

### Column ConnID

The current connection ID. This value will be unspecified for multimedia interactions.

### Column ConnIDnum

The numeric representation of the connection ID. This value will be unspecified for multimedia interactions.

### Column SwitchCallID

The switch-specific call ID. This value will be unspecified for multimedia interactions.

### Column IRID

The reference to the entry in the interaction segments hierarchy (G\_IR table).

### Column RootIRID

A reference to the first interaction segment in the interaction hierarchy (G\_IR table).

### Column State

The call state. One of the following values:

- 0 - unknown - Reserved
- 1 - active - The interaction is active
- 2 - terminated - The interaction has been terminated

#DICTIONARY TYPE 4

### Column CallType

The interaction's type. One of the following values:

- 0 - unknown - Reserved for cases when ICON is unable to determine the interaction's type
- 1 - internal
- 2 - inbound
- 3 - outbound
- 4 - consult

#DICTIONARY TYPE 5

### Column MediaType

The media type of this interaction. One of the following values:

- 0 - unknown - Reserved for cases when ICON is unable to determine media type
- 1 - voice
- 2 - email
- 3 - chat
- 1000 - open media

#DICTIONARY TYPE 6

**Column SwitchID**

The DBID of the Switch. This value will be unspecified for interactions originating from Interaction Server.

**Column TenantID**

The DBID of the Tenant.

**Column CallANI**

The Automatic Number Identification, as reported by the T-Server.

**Column CallDNIS**

The directory number to which the call was made, the DNIS, as reported by the T-Server. This value will be empty for multimedia interactions.

**Column Created**

The GMT-equivalent date and time when the interaction was initiated, as reported by T-Server or Interaction Server.

**Column Created\_ts**

The UTC-equivalent value of the CREATED field.

**Column Created\_tcode**

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

**Column Terminated**

The GMT-equivalent date and time when the interaction was terminated.

**Column Terminated\_ts**

The UTC-equivalent value of the TERMINATED field.

**Column Terminated\_tcode**

A reference, derived from the value of the TERMINATED\_TS field, to a record in the G\_TIMECODE table.

### Column CHID

The call history record ID. This is the primary key.

### Column CallID

The call UUID, as provided by the server.

### Column CSeq

The call history record sequence number, from the call creation time.

### Column ChangeType

The type of change of call state

- 1 - call\_created
- 2 - call\_terminated
- 3 - call\_merged - Call merge (to another)
- 4 - call\_trfailed - Call scenario error

### #DICTIONARY TYPE 1

## Column RefID

The reference to the call that is left after the merge operation (transfer or conference) for the call terminated record. This field is null otherwise.

## Column Added

The GMT-equivalent date and time when the record was added. The time is taken from the T-Server event, which triggers the creation of the call history record.

## Column Added\_ts

The UTC-equivalent value of the ADDED field.

## Column Added\_tcode

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column CallID

The unique ID of the call. The lxnGUID.

### Column F\_CONN

This flag is set to TRUE if at least one INTERNAL or EXTERNAL party in a call changed state to CONNECTED with call control event CallControlEvent\_Established.

### Column F\_CONN\_EXTN

This flag is set to TRUE if at least one INTERNAL party in a call changed state to LocalConnectionState\_connected with call control event CallControlEvent\_Established, and this party was on the device of type "Extension" or "ACD Position".

### Column F\_TE\_ABND

This flag is set to TRUE if EventAbandoned was reported by T-Server on the call.

### Column CNT\_HOLD

This is the number of times an internal party in a call changed state to hold, with a call control event Held.

### Column CNT\_DIVERT

This is the number of times an internal party in a call changed state to null, with a call control event Diverted.

### Column CNT\_TRANSFER

This is the number of times a SingleStepTransfer or a TwoStepTransfer was reported in a call.

### Column CNT\_TRANSFER\_LGIN

This is the number of times a call was transferred by the party which was on the device that has the agent logged in.

### Column CNT\_CONFERENCE

This is the number of times that a two-step conference was reported in a call.

### Column T\_DURATION

This is the duration of the time interval from initiation to termination of the call.

### Column T\_CONN

This is the duration of the time interval from initiation of the call to the moment when the F\_CONN flag is set to TRUE. If the F\_CONN flag is not set to true, then the value of T\_CONN is 0.

### Column T\_CONN\_EXTN

This is the duration of the time interval from the initiation of the call to the moment when F\_CONN\_EXTN flag is set to TRUE. If the F\_CONN\_EXTN flag is not set to true, the value of T\_CONN\_EXTN is 0.

### Column T\_TE\_ABND

This is the duration of the time interval from the initiation of the call to the moment when the F\_TE\_ABND flag is set to TRUE. If the F\_TE\_ABND flag is not set to true, then the value of T\_TE\_ABND is 0.

### Column TT\_ALERTING

This is the sum of all the time interval durations if there was at least one internal party in a call in the ALERTING state.

### Column TT\_CONNECTED

This is the sum of all the time intersections when all parties in a call were simultaneously in a CONNECTED state.

### Column TT\_HOLD

This is the sum of all the time interval durations when there was at least one internal party in a call in the HOLD state.

### Column TT\_QUEUED

This is the sum of all the time interval durations when there was at least one internal party in a call in the

QUEUED state.

Column CM\_EXT\_1 through CM\_EXT\_10

Name	Code	Data Type	P	M	F	AN
DTYPE	DTYPE	INTEGER	X	X		
DNAME	DNAME	VARCHAR2(64)				
DDESC	DDESC	VARCHAR2(255)				

### Column DTYPE

The identifier of the enumeration class. The set of the enumeration class values is expanded in the G\_DICTIONARY tables.

### Column DNAME

The name of the enumerator class.

### Column DDESC

The description of the enumerator class.

## Table G\_DND\_HISTORY

This table stores information about the activation of the Do Not Disturb (DND) feature within an agent's session. The T-Server model registers DND events against individual DNs. For the Multimedia model, the DND feature can be activated or deactivated only for the agent's overall place, which may consist of more than one DN. As such, the ENDPOINTID field will always hold a value of 0 for interactions originating from Interaction Server. Whether ICON writes to this table is determined by the setting of one or more configuration options in the [filter-data] section.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column LoginSessionID

The agent's login session ID (GUID). The same value as stored in G\_LOGIN\_SESSION.LOGINSESSIONID.

### Column AgentState

The state of the agent on the device (endpointid) against a queue (queueid), or the previous state in G\_AGENT\_STATE\_HISTORY table. One of the following values:

0 - null - agent is logged off

1 - login - agent is logged in, but no information whether the agent is ready to receive calls

2 - notready - agent is not ready to receive calls

3 - ready - agent is ready to receive calls

4 - acw - agent is in after call work state

5 - busy - agent is on the call

6 - unknown - agent's login session is present, but ICON has no information about agent's state (due to disconnect from t-server, etc.)

### #DICTIONARY TYPE 16

### Column EndPointID

The DBID of the DN object that is associated with this record. This value is 0 for interactions originating from an Interaction Server.

## Column State

Do-not-disturb feature state. One of the following values:

- 0 - clear - Do not disturb flag is not set
- 1 - set - Do not disturb flag is set

#DICTIONARY TYPE 80

## Column PrevState

State of the agent on device (endpointid) against queue (queueid), or previous state in G\_AGENT\_STATE\_HISTORY table. One of the following values:

- 0 - null - agent is logged off
- 1 - login - agent is logged in, but no information whether the agent is ready to receive calls
- 2 - notready - agent is not ready to receive calls
- 3 - ready - agent is ready to receive calls
- 4 - acw - agent is in after call work state
- 5 - busy - agent is on the call
- 6 - unknown - agent's login session is present, but ICON has no information about agent's state (due to disconnect from T-Server, etc)

#DICTIONARY TYPE 16

## Column PrevSEnter

The GMT-equivalent date and time when the previous agent state was detected.

## Column PrevSEnter\_ts

The UTC-equivalent value of the PREVSEnter field.

## Column PrevSEnter\_tcode

A reference, derived from the value of the PREVSEnter\_TS field, to a record in the G\_TIMECODE table.

## Column Added

The GMT-equivalent date and time when information about an agent's change of agent's state was detected.

## Column Added\_ts

The UTC-equivalent value of the ADDED field.

## Column Added\_tcode

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

## Table G\_HA\_CONTROL

This table contains information regarding the running of instances of ICON. It is used during HA consistency verification to ensure that no more than one instance of ICON in every HA pair is running in primary mode.

## Column List

## Column DomainID

Reserved

## Column PrimaryID

The DBID of the primary ICON in an HA pair. The primary ICON application writes this information.

## Column PrimaryTag

The tag that the primary ICON application uses to verify that no other ICON instance is running in primary mode.

## Column Status

The running status of this instance of ICON. One of the following values:

0 - unknown - Reserved

1 - running - Reserved

2 - stopped - Reserved

## #DICTIONARY TYPE 25

## Column HostInfo

The name of the host where this instance of ICON is running.

## Column StartTime

The GMT-equivalent date and time when this instance of ICON was started.

## Column StopTime

The GMT-equivalent date and time when this instance of ICON was stopped.

**Table G\_IR**

This table contains information regarding the latest state of the interaction, according to the information supplied by a specific provider such as T-Server, Interaction Server, or Outbound Contact Server.

## Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column IRID

The Interaction Record ID. This is a unique ID assigned either by ICON for the interaction segment or interaction hierarchy for a single site call, or by a merge procedure for the interaction hierarchy for a multi-site call.

### Column State

The interaction record state. One of the following values:

0 - unknown - Reserved

1 - active - the interaction segment corresponds to an active call

2 - terminated - the interaction segment corresponds to a terminated call or an updated interaction hierarchy after a merge

### #DICTIONARY TYPE 7

### Column ParentIRID

A reference to the parent IRID. This is assigned as the result of a call merge operation (for example, a transfer or a conference).

### Column ParentLinkType

Reserved. This field holds a 0 value in the current interaction hierarchy model.

### #DICTIONARY TYPE 11

### Column RootCallID

This is used for local calls. It is a reference to the call for which this record was initiated. If this is the result of a merge procedure, an interaction record is created where this value refers to the first call in an interaction hierarchy.

### Column RootIRID

A reference to the first record in an interaction hierarchy. The value is updated by a merge procedure.

### Column MergeState

This is the result of a merge procedure execution. One of the following values:

1- Not\_processed - the record was not processed by a merge procedure.

2- Incomplete - the merge is in a pending state; not all of the data is available for the merge.

3 - Complete - the merge is complete; the interaction details hierarchy can be used for analysis.

### #DICTIONARY TYPE 23

**Column Created**

The GMT-equivalent date and time when the record was initiated.

**Column Created\_ts**

The UTC-equivalent of the value of the **CREATED** field.

**Column Created\_tcode**

A reference, derived from the value of the **CREATED\_TS** field, to the **G\_TIMECODE** table.

**Column Terminated**

The GMT-equivalent time when the record was terminated.

**Column Terminated\_ts**

The UTC-equivalent of the value of the **TERMINATED** field.

**Column Terminated\_tcode**

A reference, derived from the value of the **TERMINATED\_TS** field, to the **G\_TIMECODE** table.

**Column GSYS\_MSEQ**

The sequence number that is assigned by the merge procedure.

**Column GSYS\_MSEQ\_TS**

The timestamp that is assigned by the merge procedure.

### Column IRHID

The unique ID of the interaction history record. This is the primary key.

### Column IRID

The ID of the Interaction record.

### Column XSEQ

Reserved

### Column ChangeType

The type of change of interaction state. One of the following values:

- 1 - ir\_created - Interaction creation
- 2 - ir\_terminated - Interaction termination
- 3 - ir\_merged - Interaction merge (result of a two-step transfer or a two-step conference)

#DICTIONARY TYPE 3

### Column RefID

Reserved

### Column Added

The GMT-equivalent data and time when the record was added as inherited from the T-Server TEvent.

### Column Added\_ts

The UTC-equivalent value of the ADDED field.

### Column Added\_tcode

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

GSYS_EXT_INT1	GSYS_EXT_INT1	INTEGER				
GSYS_EXT_INT2	GSYS_EXT_INT2	INTEGER				

### Column ID

This is the unique identifier. This is the primary key.

### Column LinkID

This is the intersite link ID, which identifies the association between two calls.

### Column CallID

The current call UUID.

### Column IsLinkType

The type of IS-Link. One of the following values:

- 0 - bidirectional - Bidirectional IS-Link
- 1 - unidirectional - Unidirectional IS-Link
- 2 - source - Unidirectional IS-Link
- 3 - target - Unidirectional IS-Link

#DICTIONARY TYPE 27

### Column RemoteLocation

The name of remote switch where the instance of the second call in the association is located.

### Column State

The current link state. One of the following values:

- 0 - unknown - Reserved.
- 1 - active - IS-Link is active.
- 2 - terminated - IS-Link is terminated.
- 3 - failed - IS-Link is failed; no pair is expected on the other site.

#DICTIONARY TYPE 21

### Column MergeState

The result of execution of merge procedure. One of the following values:

- 1 - not\_processed - merge procedure has not processed this record yet
- 2 - incomplete - IS-Link has no pair
- 3 - complete - merge procedure completed

#DICTIONARY TYPE 23

Column Initiated

The GMT-equivalent date and time when the link was initiated.

Column Initiated\_ts

The UTC-equivalent value of the INITIATED field.

Column Initiated\_tcode

A reference, derived from the value of the INITIATED\_TS field, to a record in the G\_TIMECODE table.

Column Terminated

The date and time when the link was terminated.

Column Terminated\_ts

The UTC-equivalent value of the TERMINATED field.

Column Terminated\_tcode

A reference, derived from the value of the TERMINATED\_TS field, to a record in the G\_TIMECODE table.

Column LastChange

The date and time of the last update to the link history.

Column LastChange\_ts

The UTC-equivalent value of the LASTCHANGE field.

Column LastChange\_tcode

A reference, derived from the value of the LASTCHANGE\_TS field, to a record in the G\_TIMECODE table.

### Column ID

This unique, autonumbered ID of this record. This is the primary key.

### Column LinkID

This is the intersite link ID, which identifies the association between two calls.

### Column Seq

The sequence number of the changes in this link history.

### Column ChangeType

IS-Link history record type: added, moved, or deleted. One of the following:

- 0 - unknown - Reserved
- 1 - added - IS-Link addition
- 2 - moved - IS-Link move
- 3 - deleted - IS-Link deletion

#DICTIONARY TYPE 22

### Column State

The link state of the history record. One of the following values:

- 0 - unknown - Reserved
- 1 - active - IS-Link is active
- 2 - terminated - IS-Link is terminated
- 3 - failed - IS-Link is failed; no pair is expected on the other site.

## #DICTIONARY TYPE 21

### Column CallID

A reference to the call that is currently associated with this history.

### Column PrevCallID

A reference to the call that was previously associated with this history.

### Column Added

The GMT-equivalent date and time when the history record was added.

### Column Added\_ts

The UTC-equivalent value of the ADDED field.

### Column Added\_tcode

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

## Table G\_LOGIN\_SESSION

This table contains information about agent login sessions. ICON inserts a record upon the creation of an agent login session. ICON updates records, by marking them as deleted, at the time that the agent's login session finishes. Whether ICON writes to this table is determined by the setting of one or more configuration options in the [filter-data] section.

GSYS_EXT_INT2	GSYS_EXT_INT2	INTEGER				

### Column ID

The unique, autonumbered ID of the record. This is the primary key.

### Column LoginSessionID

The agent's login session ID (GUID).

### Column AgentID

The DBID of the agent (person) configuration object in Configuration Server that logged in during this login session. This value is 0 for situations where a person is not configured.

### Column LoginID

The DBID of the login configuration object in Configuration Server (under switch) that the agent used to log in. This value is 0 for interactions originating from Interaction Server.

### Column PlaceID

The DBID of the Place configuration object in Configuration Server. This is used if the configuration contains information regarding the place(s) where the agent is working.

### Column State

State of the agent's login session. One of the following values:

0 - terminated - Login session is terminated

1 - active - Login session is active

#DICTIONARY TYPE 81

### Column PrimaryDeviceID

The DBID of the endpoint (DN) configuration object that the agent uses to first login within this login session. This value is 0 for interactions originating from Interaction Server.

### Column SwitchID

The DBID of the Switch configuration object in Configuration Server where the agent's login session was detected.

### Column Created

The GMT-equivalent date and time when the agent's login session started.

### Column Created\_ts

The UTC-equivalent value of the CREATED field.

### Column Created\_tcode

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

### Column Terminated

The GMT-equivalent date and time when the agent's login session finished (terminated). This value is 0 for interactions originating from Interaction Server.

### Column Terminated\_ts

The UTC-equivalent value of the TERMINATED field.

### Column Terminated\_tcode

A reference, derived from the value of the TERMINATED\_TS field, to a record in the G\_TIMECODE table.

### Column Reason

This is the reason that the login session terminated.

### Column InternalReason

This is the internal (system) reason of termination of the login session. One of the following values:

- 1 - unknown - no special system reason specified(Reserved)
- 0 (or null) - normal - no special system reason specified. Login session terminated normally.
- 1 - stuck - stuck login session detected
- 2 - device - device storage conflict in gcti login session manager
- 3 - agent - agent storage conflict in gcti login session manager
- 4 - cleanup - cleanup command received by gcti login session manager

5 - register - session terminated as result of information from event registered

6 - disconnect - session terminated as result of disconnect from server

ATTR_VALUE	ATTR_VALUE	VARCHAR2(255)				

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column LRID

Same as G\_LOG\_MESSAGES.ID.

### Column MESSAGE\_ID

Same as G\_LOG\_MESSAGES.MESSAGE\_ID.

### Column ATTR\_NAME

The name of the message attribute. For example, "PartitionID" or "Record\_Count" for a corresponding G\_LOG\_MESSAGES record that indicates purging of a partition has begun ("GSYS\_PURGE\_PARTITION purge started ...")

### Column ATTR\_VALUE

The value of the message attribute. For example:

"20080930" for an ATTR\_NAME of "PartitionID" and

"2673" for an ATTR\_NAME of "Record\_Count"

## Table G\_LOG\_GETIDRANGEREQ

An internal table that Solution Control Interface (SCI) uses for selecting log records. Refer to Framework documentation for information about SCI and Message Server.

APPNAME	APPNAME	VARCHAR2(255)				
HOSTNAME	HOSTNAME	VARCHAR2(128)				
MESSAGETEXT	MESSAGETEXT	VARCHAR2(255)				

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column MESSAGE\_ID

ID of log event. This is ID recognized by Message Server.

### Column TIMEGENERATED

The GMT-equivalent date and time when the message was generated.

### Column TIMEWRITTEN

The date and time when the message was written.

## Column PRIORITY

Specifies priority of the log message. One of the following values:

- 0 - unknown
- 1 - debug
- 2 - information - Trace
- 3 - interaction
- 4 - error - Standard
- 5 - alarm

#DICTIONARY TYPE 32

## Column ORIGIN

Specifies origin of the log message. One of the following values:

- 0 - connection
- 1 - communication
- 2 - application
- 3 - external
- 4 - management
- 5 - logcontrol

#DICTIONARY TYPE 34

## Column CATEGORY

Specifies category of the log message. One of the following values:

- 0 - default
- 1 - alarm
- 2 - audit

#DICTIONARY TYPE 33

## Column DATALEN

Size of the buffer required to get packed attributes associated with this log event.

## Column APPDBID

The DBID of application that is related to this log event.

**Column APPTYPE**

The type of application that is related to this log event.

**Column APPNAME**

Name of the application having APPDBID that is related to this log event. If the application is ICON itself, then this field provides the name of the stored procedure which created this record in the following format:

ICON DB: <stored procedure name>

For example:

ICON DB: GSYSPurge76

**Column HOSTNAME**

Name of the host where the application related to this log event runs.

**Column MESSAGETEXT**

The text of the message. For ICON purge operations, this field stores information about either the name of the table being purged and its purge status or the status of a purge partition; for example:

```
GSYS_PURGE_PARTITION purge started...
IDB:Purge-table:G_CALL_STAT initiated...
IDB:Purge-table:G_CALL_STAT completed...
...
GSYS_PURGE_PARTITION purge completed
```

If the purge procedure cannot start, for some reason, ICON logs "ERROR:wrong parameters" to this field.

**Table G\_PARTY**

This table contains information regarding the latest state of the party involved in an interaction according to information received from T-Server or Interaction Server. Whether ICON writes to this table is determined by the setting of one or more configuration options in the [filter-data] section.

### Column ID

The unique, autonumbered ID of the party record. This is the primary key.

### Column PartyID

The unique ID of the association between the party and the call, generated by ICON. This is changed when the party moves from one call to a different call.

### Column PartyGUID

The unique ID of the party instance, generated by ICON. This ID remains unchanged during the lifetime of the party.

### Column Type

The party type. One of the following values:

0 - unknown - Reserved

1 - internal - party is associated with a device defined in the switch configuration

2 - external - party is associated with a device not defined in the switch configuration

3 - MULTIMEDIA Place - Place associated with the party

- 4 - MULTIMEDIA Interaction Queue - party is associated with a script of type "Interaction Queue"
- 5 - MULTIMEDIA Interaction Workbin - party is associated with a script of type "Interaction Workbin"
- 6 - MULTIMEDIA Routing Strategy - party is associated with a script of type "Simple Strategy"

#### #DICTIONARY TYPE 9

##### Column PRole

Party role. One of the following values:

- 0 - unknown - Reserved for future use
- 1 - observer - indicates that the supervisor was observing service

#### #DICTIONARY TYPE 10

##### Column ParentPartyID

The association with the other party, which is established as result of different call scenarios (ParentLinkType). One of the following values:

- 0 - unknown - Reserved
- 1 - consultation - the ParentPartyID refers to the held party from the primary call
- 2 - transfer - the PartyPartyID refers to the party record of the call from which the party was transferred
- 3 - conference - the PartyPartyID refers to the party record of the call from which the party was conferenced
- 4 - divert - the PartyPartyID refers to the party record of the call that was diverted to this party
- 5 - route - the ParentPartyID refers to the party record of the call that was routed to this party

#### #DICTIONARY TYPE 11

##### Column ParentLinkType

The type of association with the other party (identified by ParentPartyID) established as result of different call scenarios. One of the following values:

- 0 - unknown - Reserved
- 1 - consultation - the ParentPartyID refers to the held party from the primary call
- 2 - transfer - the PartyPartyID refers to the party record of the call from which the party was transferred
- 3 - conference - the PartyPartyID refers to the party record of the call from which the party was conferenced
- 4 - divert - the PartyPartyID refers to the party record of the call that was diverted to this party
- 5 - route - the ParentPartyID refers to the party record of the call that was routed to this party

#### #DICTIONARY TYPE 11

## Column CallID

The current ID as inherited from T-Server or Interaction Server.

## Column State

The current state of party. In PREVSTATE column - previous party state. One of the following values:

0 - unknown - state in which there is no relationship between the call and the device

1 - initiated - Reserved

2 - alerting - state in which an attempt is being made to connect an interaction to a device. Typically, the call is being presented for the purpose of having the device connect to the interaction and the user is made aware that the interaction is being delivered at the device

3 - connected - state in which the device is actively participating in the interaction

4 - hold - state in which the device is inactively participating in the call. This state includes logical participation in a call while physical participation is suspended

5 - queued - state in which interaction progression is suspended or made inactive while awaiting some form of action. Examples include: a call is parked at a device, a call is queued at a distribution mechanism, waiting for an agent to become available, etc

6 - fail - state in which call progression has been aborted

## #DICTIONARY TYPE 8

## Column EndPointDN

The name of the endpoint.

## Column EndPointID

The DBID of the endpoint. For DNs, this DBID is equivalent to GC\_ENDPOINT.ID. For script objects of type Interaction Queues, Interaction Workbins, and Routing Strategies, this is equivalent to GC\_SCRIPT.ID. For Place objects, this is equivalent to GC\_PLACE.ID.

## Column EndPointType

The type of the endpoint. One of the following values:

0-Unknown DN type

1-Extension

2-ACD Position

3-ACD Queue

4-Routing Point

5-Virtual Queue

6-Virtual Routing Point

7-Voice Treatment Port

8-Voice Mail  
9-Mobile Station  
10-Call Processing Port  
11-Fax  
12-Modem  
13-Music Port  
14-Trunk  
15-Trunk Group  
16-Tie Line  
17-Tie Line Group  
18-Mixed  
19-External Routing Point  
20-Network Destination  
21-Service Number  
22-Routing Queue  
23-Communication DN  
24-E-mail Address  
25-Voice over IP Port  
26-Video over IP Port  
27-Chat  
28-CoBrowse  
29-Voice over IP Service  
30-Workflow  
31-Access Resource  
32-GVP DID

This value is the same as that stored in GC\_ENDPOINT.TYPE, if the endpoint is a voice DN. If the endpoint is one of the following, the value of this field is the same as that stored in GC\_SCRIPT.TYPE:

Interaction Queue  
Interaction Workbin  
Routing Strategy

If the endpoint is Agent Place, the value of this field is 0 (zero).

# DICTIONARY TYPE 505

Column TenantID

The DBID of the Tenant configuration object that is associated with either the T-Server Switch or the Interaction Server Switch.

### Column AgentID

The DBID of the agent that is associated with the party.

### Column CCEvent

A call control event that is associated with the party state change. In G\_PARTY - the party termination event. One of the following values:

- 1 - unknown
- 0 - bridged
- 1 - connection\_cleared
- 2 - delivered
- 3 - established
- 4 - failed
- 5 - held
- 6 - offered
- 7 - originated
- 8 - queued
- 9 - retrieved
- 10 - service\_initiated
- 11 - transferred
- 12 - conferenced
- 13 - diverted

#DICTIONARY TYPE 30

### Column CCEventCause

The cause that is associated with the party state change and the call control event. In G\_PARTY, the cause of the Party termination event. One of the following values:

- 0 - unknown - Reserved
- 1 - busy
- 2 - conference
- 3 - distributed
- 4 - distribution\_delay
- 5 - entering\_distribution
- 6 - normal
- 7 - redirected
- 8 - single\_step\_conference
- 9 - single\_step\_transfer
- 10 - transfer

## #DICTIONARY TYPE 31

### Column Created

The GMT-equivalent date and time when the party was associated with the call.

### Column Created\_ts

The UTC-equivalent value of the CREATED field.

### Column Created\_tcode

A reference, derived from the value of the CREATED\_TS field, to the G\_TIMECODE table.

### Column Terminated

The GMT-equivalent date and time when the party was released from the call.

### Column Terminated\_ts

The UTC-equivalent value of the TERMINATED field.

### Column Terminated\_tcode

A reference, derived from the value of the TERMINATED\_TS field, to the G\_TIMECODE table.

### Column LastChange

The GMT-equivalent date and time of the last state change of the party.

### Column LastChange\_ts

The UTC-equivalent value of the LASTCHANGED field.

### Column LastChange\_tcode

A reference, derived from the value of the LASTCHANGED\_TS field, to the G\_TIMECODE table.

### Column PHID

The party history record ID. This is the primary key.

### Column PartyID

The unique ID of the association between the party and the call. This is changed when the party is moved from one call to a different call.

### Column PSeq

The sequence number of the party state change in scope for this party.

### Column CSeq

The sequence number of the party state change in the scope of call.

## Column ChangeType

The type of change of party state. One of the following values:

- 1 - party\_created
- 2 - party\_terminated
- 3 - party\_statechanged
- 4 - party\_fsmerror (Low level party state transition failure)
- 5 - party\_fsm2error (CSTA party state error)

## #DICTIONARY TYPE 2

## Column CCEvent

The call control event that is associated with the party state change. (In G\_PARTY, this is the party termination event.) One of the following values:

The party type. One of the following values:

- 0 - unknown - Reserved
- 1 - internal - party is associated with a device defined in the switch configuration
- 2 - external - party is associated with a device not defined in the switch configuration
- 3 - MULTIMEDIA Place - Place associated with the party
- 4 - MULTIMEDIA Interaction Queue - party is associated with a script of type "Interaction Queue"
- 5 - MULTIMEDIA Interaction Workbin - party is associated with a script of type "Interaction Workbin"
- 6 - MULTIMEDIA Routing Strategy - party is associated with a script of type "Simple Strategy"

#### #DICTIONARY TYPE 9

## Column PrevState

The previous state of party. One of the following values:

0 - unknown - state in which there is no relationship between the call and the device

1 - initiated - Reserved

2 - alerting - state in which an attempt is being made to connect a call to a device. Typically, the call is being presented for the purpose of having the device connect to the call and the user is made aware that the call is being delivered at the device

#DICTIONARY TYPE 8

## Column PrevSEnter

The GMT-equivalent date and time of the previous party state change.

## Column PrevSEnter\_ts

The UTC-equivalent value of the PREVSEnter field.

## Column PrevSEnter\_tcode

A reference, derived from the value of the PREVSEnter\_TS field, to a record in the G\_TIMECODE table.

## Column ParentPartyID

The ID of the associated party.

## Column ParentLinkType

The type of the association between the two parties. One of the following values:

0 - unknown

1 - consultation

2 - transfer

3 - conference

4 - divert

5 - route

**#DICTIONARY TYPE 11****Column EndpointID**

Depending on the scenario, this field holds one of the following values:

- NULL, for an external party (such as one originating from an unmonitored device)
- The DBID of the local (monitored) device to which the interaction was diverted or transferred (for single-step transfer scenarios only).
- The DBID of the local device, for the first record in the party's history (at party creation).
- NULL, for a local device, where the record represents neither the first nor last record in the party's history
- 0, for the last record in the party's history (reflecting normal party termination)

**Column Added**

The GMT-equivalent date and time of the record.

**Column Added\_ts**

The UTC-equivalent of the value of the ADDED field.

**Column Added\_tcode**

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

### Column ID

The unique, autonumbered ID of the record. This is the primary key.

### Column PartyID

The ID of party for which metrics were calculated.

### Column TT\_ALERTING

The total time, in seconds, that the party spent in the ALERTING state. This represents the sum of all the durations of the time intervals of when the party was in the ALERTING state.

### Column TT\_CONNECTED

The total time, in seconds, that the party spent in the CONNECTED state. This represents the sum of all the durations of the time intervals when the party was in the CONNECTED state. The states of other parties in the call do not affect this metric.

### Column TT\_HOLD

The total time, in seconds, that the party spent in the HOLD state. This represents the sum of all the durations of the time intervals when the party was in the HOLD state.

**Column TT\_QUEUED**

The total time, in seconds, that the party spent in the QUEUED state. This represents the sum of all the durations of the time intervals when the party was in the QUEUED state.

**Column TT\_ACW**

The total time, in seconds, that the party spent in the After Call Work (ACW) state. This is the sum of all the durations of the time intervals when the party was in the ACW state.

**Column CNT\_ALERTING**

The number of times that the party changed state to ALERTING.

**Column CNT\_CONNECTED**

The number of times that the party changed state to CONNECTED.

**Column CNT\_HOLD**

The number of times that the party changed state to HOLD.

**Column CNT\_QUEUED**

The number of times that the party changed state to QUEUED.

**Column CNT\_ACW**

A flag indicating whether the ACW state is the present for this party. One of the following values:

0 - indicates that the ACW state was not present for this party.

1 - indicates that the ACW state was present for this party.

**Column TT\_ON\_ALERT**

The total time, in seconds, that there was another party in a call in the ALERTING state. This represents the sum of all the durations of the time intervals when there was at least one other party in a call which was in the ALERTING state.

**Column TT\_ON\_HOLD**

The total time, in seconds, that there was another party in a call in the HOLD state. This represents the sum of all the durations of the time intervals when there was at least one other party in a call which was in the HOLD state.

**Column TT\_ON\_QUEUE**

The total time, in seconds, that there was another party in a call in the QUEUED state. This is the sum of all the durations of the time intervals when there was at least one other party in a call which was in the QUEUED state.

### Column TT\_ON\_CONNECTED

The total time, in seconds, that all parties in a call in the CONNECTED state during the lifetime of the party. This represents the sum of all the durations of the time intervals when all parties were in the CONNECTED state during the lifetime of this party.

### Column T\_DURATION

The life time of the party.

### Column PM\_EXT\_1 through PM\_EXT\_10

Reserved

### Column DomainID

Reserved

### Column PrimaryID

The DBID of the primary ICON in an HA pair. The primary ICON application writes this information.

## Column ProviderTag

The ID of the provider class. One of the following values:

- 0 - unknown - Reserved
- 1 - gcc - Call control information provider
- 2 - gls - Login session information provider
- 3 - gud - User data information provider
- 4 - gos - Outbound extensions information provider
- 5 - cfg - Configuration information provider
- 6 - vq - Virtual queue information provider

#DICTIONARY TYPE 26

## Column SeqCounter

The value of the counter. This field is incremented by ICON.

## Column SeqCurrent

This field contains information regarding the most recent value that was written to the GSYS\_SEQ(USEQ) fields. It is populated with a configured delay (default: 60 seconds).

## Table G\_ROUTE\_RESULT

This table contains information regarding the results of the routing of a specific voice call, according to the information passed from the Universal Routing Server through either the T-Server or Interaction Server application.

GSYS_EXT_INT2	GSYS_EXT_INT2	INTEGER				

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column CallID

The unique ID of the interaction.

### Column ConnID

The T-Server event connection ID. This is preserved for backward compatibility.

### Column PartyID

The ID of the party record for the party that is associated with the routing point.

### Column IRID

Reference to record in interaction hierarchy table (G\_IR).

### Column EndPointID

The DBID of the routing point device.

### Column RTargetRuleSelected

A copy of the data that was attached by the URS with the RTargetRuleSelected key.

### Column RTargetObjectSelected

A copy of the data that was attached by the URS with the RTargetObjectSelected key.

### Column RTargetTypeSelected

Route target type - copy of the data that was attached by the URS with the RTargetTypeSelected key. One of the following values:

- 0 - agent - Agent
- 1 - agent\_place - Place
- 2 - agent\_group - Agent group
- 3 - place\_group - Place group
- 4 - route\_point - Routing point
- 5 - queue - Queue
- 6 - queue\_group - Queue group
- 7 - switch - Switch
- 8 - reg\_dn - Regular DN
- 9 - campaign - Campaign
- 10 - campaign\_group - Campaign group
- 11 - calling\_list - Calling list
- 12 - campaign\_calling\_list - Campaign Calling list
- 13 - tenant - Tenant
- 14 - staging\_area - Staging area
- 15 - routing\_strategy - Routing strategy
- 100 - default - Default target
- 101 - destination\_label - Destination label
- 102 - persistent\_queue - Persistent queue
- 103 - workbin - Workbin

### #DICTIONARY TYPE 29

### Column RTargetAgentSelected

A copy of the data that was attached by the URS with the RTargetAgentSelected key

### Column RTargetPlaceSelected

A copy of the data that was attached by URS with the RTargetPlaceSelected key.

### Column RRequestedSkillComb

A copy of the data that was attached by URS with the RRequestedSkillCombination key.

### Column RStrategyName

A copy of the data that was attached by the URS with the RStrategyName key, only if URS routed the interaction. This strategy name must be less than 256 characters; otherwise, ICON may stop writing interaction records to IDB. If URS did not route the interaction, then the value of this field will be null.

### Column RTenant

A copy of the data that was attached by the URS with the RTenant key.

### Column DestEndPointDN

The DN name to which a call is successfully routed.

### Column DestEndPointID

The DBID of the configured DN to which the interaction is routed.

### Column DestEndPointType

The routing type of the configured DN to which voice call or Multimedia interaction is successfully routed. Refer to the Appendix for a listing of permissible values.

### #DICTIONARY TYPE 505

### Column Result

The result of the routing operation. One of the following values:

0 - unknown - Reserved

1 - success - the routing was successful

2 - failure - the routing attempt failed (if a voice call or chat was abandoned, etc)

102 - distributed\_to\_default - call was routed to the default destination after the URS timeout expired

103 - routed\_by\_switch - call was routed by the switch

105 - other\_reasons - the routing was unsuccessful due to some other reasons (unclassified)

133 - ixn\_server\_timeout - routing timeout expired on Interaction Server (open media interactions only)

134 - ixn\_taken\_out - an interaction is taken (pulled out) from strategy by Interaction Server (open media interactions only)

### #DICTIONARY TYPE 28

### Column Duration

The duration of the routing dialog. For successful routing, this is the time between the EventRouteRequest and the EventRouteUsed.

### Column Created

The GMT-equivalent date and time when the record was created as inherited from T-Server or Interaction Server.

### Column Created\_ts

The UTC-equivalent time of the value in the CREATED field.

### Column Created\_tcode

A reference, derived from the value of the CREATED\_TS field, to a record in G\_TIMECODE table.

### Column Terminated

The GMT-equivalent date and time when the record was terminated, as inherited from T-Server (EventRouteUsed or EventAbandoned TEvents) or Interaction Server.

### Column Terminated\_ts

The UTC-equivalent time of the value in the TERMINATED field.

### Column Terminated\_tcode

A reference, derived from the value of the TERMINATED\_TS field, to a record in G\_TIMECODE table.

## Table G\_SECURE\_USERDATA\_HISTORY

This table records the changes in the UserData attribute of TEvents associated with voice calls and changes in the isOnline attribute of events associated with chat sessions. In addition, ICON may record the change history of the Reasons and Extensions attributes of voice interactions as well as any other attributes of a call that are not recorded in the G\_CALL\_HISTORY and the G\_PARTY\_HISTORY\_TABLE, if configured to gather data from Interaction Concentrator.

One prerequisite is that ICON must be able to determine that such data is associated with a specific interaction and that this association is known at run time. ICON's writing to this table is also determined by the setting of one or more configuration options in the [filter-data] section.

GSYS_EXT_INT1	GSYS_EXT_INT1	INTEGER				
GSYS_EXT_INT2	GSYS_EXT_INT2	INTEGER				

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column CallID

This field points to the record in the G\_CALL table that represents the call to which the data is attached. This field may be NULL, if the user data came with the EventUserEvent.

### Column PartyID

This field points to the record in the G\_PARTY table that represents the party who added, changed, or deleted the data. Any one of the following attributes can be the source of attached data:

- o AttributeUserData
- o AttributeExtensions
- o AttributeReason

With a change in the data in AttributeUserData and upon receipt of AttachedDataChangedEvent, then PartyID is defined by the ThirdPartyDN attribute, if any exists.

### Column EndPointID

This field contains the DBID of the endpoint where data was added, changed, or deleted. If the data was taken from the event that caused the creation of the respective call, then this is the first party that created in the call. If the data was taken from the AttachedDataChangedEvent, then the party is defined by the ThirdPartyDN attribute, if any exist. Otherwise, this is the party that is defined by the ThisDN attribute (if any). For the rest of changes, the party is defined by the ThisDN attribute.

### Column EndPointDN

The device number that is associated with the data.

### Column AgentID

This field contains the DBID of the agent who changed the data. This is the agent who logged into the endpoint that is associated with the data change (if this information is available in the run time).

### Column SwitchID

This field contains the DBID of the Switch object that owns the endpoint that is associated with the change. If the

EndPointID field is NULL, then so is the field SwitchID, and *vice versa*.

### Column KeyName

This is the KeyName field. It records the name of the user data key that changed its value. The user determines which keys should be recorded by specifying them in ICON's configuration of user data.

### Column ChangeType

This field specifies the type of change that caused the record to appear in the table. One of the following values:

1 - created - the value of the key has been attached to the call at the moment the call was created. If this is true, then both the OldCharValue and the OldIntValue fields have the value: NULL

2 - added - the value of the key that has just been added. If this is true, then both the OldCharValue and the OldIntValue fields have the value: NULL

3 - updated - the value of the key has changed. If this is true, then either the OldCharValue or the OldIntValue field (depending of the data type) contains the previous value of the key

4 - deleted - the key has been deleted from the user data. If this is true, then both the CharValue and the IntValue fields are equal to NULL, and the OldCharValue or the OldIntValue field (depending of data type) contains the last value of the key

5 - terminated - the value of the key at the call termination

### #DICTIONARY TYPE 19

### Column KSeq

The sequential number of the change of the value of the specific key associated with the call. The changes of a key are numbered separately for every call that the key is associated with. Numbering starts with 1.

### Column CSEQ

The sequence number that corresponds to the party history.

### Column Type

The type of the data source: extensions, reasons, or attached (user) data. One of the following values:

1 - userdata

2 - reasons

3 - extensions

4 - attributes (reserved for future use)

5 - mcr\_workbin

### #DICTIONARY TYPE 20

## Column KEYID

The ID of the key name.

## Column Value

This field contains the character value of the key. The value is non-NULL unless one of the following conditions is met:

DataType != STRING

or

ChangeType = DELETED;

otherwise the value is NULL.

## Column Added

The GMT-equivalent date and time when the key was changed as inherited from T-Server (or other data provider).

## Column Added\_ts

This UTC-equivalent value of the ADDED field.

## Column Added\_tcode

A reference, derived from the ADDED\_TS field, to a record in the G\_TIMECODE table.

## Table G\_SYNC\_CONTROL

This table contains information about the last events stored by different ICON instances. This information is used during the HA synchronization.

## Column List

Name	Code	Data Type	P	M	F	AN

GSYS_EXT_INT2	GSYS_EXT_INT2	INTEGER				

### Column DomainID

Reserved

### Column PrimaryID

The DBID of the primary ICON in an HA pair. The primary ICON application writes this information.

### Column ProviderTag

The ID of the provider class. One of the following values:

- 0 - unknown - Reserved
- 1 - gcc - Call control information provider
- 2 - gls - Login session information provider
- 3 - gud - User data information provider
- 4 - gos - Outbound extensions information provider
- 5 - cfg - Configuration information provider
- 6 - vq - Virtual queue information provider

#DICTIONARY TYPE 26

### Column ClusterID

The DBID of the primary server in the HA pair of the provider (such as the primary T-Server or primary Outbound Contact Server).

### Column ProviderID

The DBID of the specific provider instance that supplied this event.

### Column EventTimeSec

The time, in seconds, when this event was generated at the provider.

### Column EventTimeUsec

The time, in milliseconds, when this event was generated at the provider.

### Column SessionID

The session identifier (if supplied) that corresponds to the event.

### Column EventID

The event identifier as reported by the provider.

## Table G\_TIMECODE

This table expands the timecode values, referenced in other tables as \*\_TCODE, into specific time value entities, such as month name, day of the week, day of the month, and so on. The table should be pre-populated before using it.

### Column List

Name	Code	Data Type	P	M	F	AN
ID	ID	INTEGER		X		
TC_MIN	TC_MIN	INTEGER		X		
TC_HOUR	TC_HOUR	INTEGER		X		
TC_DAY	TC_DAY	INTEGER		X

TC_WEEKNAME	TC_WEEKNAME	VARCHAR2(30)				
TC_MONTHNAME	TC_MONTHNAME	VARCHAR2(20)				
TC_H	TC_H	INTEGER				
TC_Q	TC_Q	INTEGER				

### Column ID

The timecode value. This corresponds to \*\_TCODE fields, such as CREATED\_TCODE, ADDED\_TCODE, DELETED\_TCODE, and LASTCHANGE\_TCODE in other tables.

### Column TC\_MIN

The number of minutes corresponding to this timecode.

### Column TC\_HOUR

The number of hours corresponding to this timecode.

### Column TC\_DAY

The day of the month corresponding to this timecode.

### Column TC\_WEEKDAY

The day of the week corresponding to this timecode.

Column TC\_WEEK

The number of the week in which this timecode falls.

Column TC\_MONTH

The month number corresponding to this timecode.

Column TC\_YEAR

The year value corresponding to this timecode.

Column TC\_DAYNAME

The name of the weekday corresponding to this timecode.

Column TC\_WEEKNAME

The name of the week in which this timecode falls.

Column TC\_MONTHNAME

The month name corresponding to this timecode.

Column TC\_H

The hour corresponding to this timecode.

Column TC\_Q

The quarter in which this timecode falls.

Table G\_USERDATA\_HISTORY

This table records the changes in the UserData attribute of TEvents associated with voice calls and changes in the isOnline attribute of events associated with chat sessions. In addition, ICON may record the change history of the Reasons and Extensions attributes of voice interactions as well as any other attributes of a call that are not recorded in the G\_CALL\_HISTORY and the G\_PARTY\_HISTORY\_TABLE, if configured to gather data from Interaction Concentrator.

One prerequisite is that ICON must be able to determine that such data is associated with a specific interaction and that this association is known at run time. ICON's writing to this table is also determined by the setting of one or more configuration options in the [filter-data] section.

GSYS_EXT_INT1	GSYS_EXT_INT1	INTEGER				
GSYS_EXT_INT2	GSYS_EXT_INT2	INTEGER				

### Column ID

The unique, autonumbered ID of this record. This is the primary key .

### Column CallID

This field points to the record in the G\_CALL table that represents the call to which the data is attached. This field may be NULL, if the user data came with the EventUserEvent.

### Column PartyID

This field points to the record in the G\_PARTY table that represents the party who added, changed, or deleted the data. Any one of the following attributes can be the source of attached data:

- AttributeUserData
- AttributeExtensions
- AttributeReason

With a change in the data in AttributeUserData and upon receipt of AttachedDataChangedEvent, then PartyID is defined by the ThirdPartyDN attribute, if any exists. Otherwise, this field is empty.

### Column EndPointID

This field contains the DBID of the endpoint that added, changed, or deleted the data. If the data was taken from the event that caused the creation of the respective call, then this is the first party created in the call. If the data

was taken from the `AttachedDataChangedEvent`, then the party is defined by the `ThirdPartyDN` attribute, if any exist. Otherwise, this is the party that is defined by the `ThisDN` attribute (if any). For the rest of changes, the party is defined by the `ThisDN` attribute.

#### Column `EndPointDN`

The device number that is associated with the data.

#### Column `AgentID`

This field contains the DBID of the agent object that represents the person who changed the data. This is the agent who logged into the endpoint that is associated with the data change (if this information is available in the run time).

#### Column `SwitchID`

This field contains the DBID of the Switch object that owns the endpoint that is associated with the change. If the `EndPointID` field is NULL, then so is the field `SwitchID`, and *vice versa*.

#### Column `KeyName`

For voice interactions, this field records the name of the `UserData` key whose value was changed. The user determines which keys should be recorded by specifying them in the ICON configuration user data specification.

For chat interactions, this field's value is `_attr_is_online`.

#### Column `ChangeType`

This field specifies the type of change for this record. One of the following values:

##### 1 - created

For voice interactions, '1' indicates that the value of the key was attached to the call at the moment the call was created.

For chat interactions, ICON assigns a change type of '1' upon receipt of an `eventInteractionSubmitted` event with an `isOnline` attribute setting of true.

##### 2 - added

For voice interactions, '2' indicates that the value of the key has just been added.

##### 3 - updated

For voice interactions, '3' indicates that the value of the key has changed.

For chat interactions, ICON assigns a change type of '3' upon receipt of an `eventPropertiesChanged` event with an `isOnline` attribute setting of either true or false.

#### 4 - deleted

For voice interactions, '4' indicates that the key has been deleted from UserData.

#### 5 - terminated

For voice interactions, '5' indicates that ICON records the value of the key upon call termination.

For chat interactions, ICON assigns a change type of '5' upon receipt of an eventProcessingStopped event with an isOnline attribute setting of either true or false.

### #DICTIONARY TYPE 19

#### Column KSeq

The sequential number of the change of the value of the specific key associated with the call. The changes of a key are numbered separately for every call that the key is associated with. Numbering starts with 1.

#### Column CSEQ

The sequence that corresponds to the G\_PARTY\_HISTORY.

#### Column Type

The type of the data source: extensions, reasons, or attached data (userdata), or properties of a multimedia (MCR) workbin instance. One of the following values:

- 1 - userdata
- 2 - reasons
- 3 - extensions
- 4 - attributes (reserved for future use)
- 5 - mcr\_workbin

### #DICTIONARY TYPE 20

#### Column KEYID

The ID of the key name. ICON hardcodes the value of 9995 for chat interactions.

#### Column Value

For voice interactions, this field contains the character value of the key. The value is non-NULL unless one of the following conditions is met:

- o The DataType != STRING or
- o The ChangeType = DELETED

Otherwise, the value is NULL.

For chat interactions, ICON writes the value of the isOnline attribute of the triggering event from Interaction Server. One of the following:

0 - chat session has been stopped

1 - chat session is alive

#### Column Added

This GMT-equivalent date and time when the key was changed as provided by T-Server (or other data provider).

#### Column Added\_ts

The UTC-equivalent value of the ADDED field.

#### Column Added\_tcode

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

## Table GOX\_Chain\_Call

The records in this table reflect the relationship between voice calls (refer to table G\_CALL in the Core Schema of IDB) and Chain processing records (refer to table GO\_Chain in this schema). Records are inserted into this table at the time when the association between voice call and processing attempt of the chain is detected by ICON.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column CallID

The CallGUID as reported by OCS.

### Column ChainGUID

The unique identifier of the chain processing attempt, as reported by OCS. This ID cannot to be changed during chain processing. Same as GO\_CHAIN.CHAINGUID.

### Column CallAttID

The call attempt GUID. This is generated and assigned by OCS. The GUID is unique for each outbound call producing attempt. Same as GO\_CHAINREC\_HIST.CALLATTID.

### Column Added

The GMT-equivalent date and time when information about the relationship was reported by OCS.

### Column Added\_ts

The UTC-equivalent value of the ADDED field. Milliseconds are truncated.

### Column Added\_tcode

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

## Table GO\_CampProp\_Hist

This table contains the history of Campaign property changes during the campaign processing attempt. Records are inserted into this table when ICON receives information about campaign property changes from OCS. Records in this table are never updated or deleted.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column SessID

The campaign processing session ID (GUID).

### Column Seq

The sequence number of state and property changes in a campaign's history.

### Column DialMode

The dial mode specified for campaign processing.

#### Column PrevDialMode

The previous dialing mode, if the dialing mode was changed.

#### Column PrevDMEnter

The GMT-equivalent date and time when previous dialing mode was detected by OCS (according to timestamp provided by OCS).

#### Column PrevDMEnter\_ts

The UTC-equivalent value of the PREVDMENTER field. Milliseconds are truncated.

#### Column PrevDMEnter\_tcode

A reference, derived from the value of the PREVDMENTER\_TS field, to a record in the G\_TIMECODE table.

#### Column OptimMode

Code of optimization mode (overdialrate, waiting time, busy factor).

#### Column OptimValue

The current value of the optimization parameter that OCS uses for this campaign.

#### Column PrevOptimMode

The previous optimization mode that OCS ran with this campaign.

#### Column PrevOptimValue

The previous optimization parameter value that OCS used for this campaign.

#### Column PrevOMEnter

The GMT-equivalent date and time when the previous optimization mode was reported by OCS.

#### Column PrevOMEnter\_ts

The UTC-equivalent value of the PREVOMENTER field. Milliseconds are truncated.

#### Column PrevOMEnter\_tcode

A reference, derived from the value of the PREVOMENTER\_TS field, to a record in the G\_TIMECODE table.

#### Column GeneralN

The numerical value of the priority parameter that OCS used for general records in this campaign.

**Column PrevGeneralIN**

The previous value of the priority parameter that OCS used for General records in this campaign.

**Column GeneralW**

The current weight of the priority parameter value for general records that OCS used for this campaign.

**Column PrevGeneralW**

The previous weight of the priority parameter value for general records that OCS used in this campaign.

**Column CallBackN**

The numerical value of the priority parameter that OCS used for callback records in this campaign.

**Column PrevCallBackN**

The previous value of the priority parameter that OCS used for callback records in this campaign.

**Column CallBackW**

The current weight of the priority parameter value for callback records that OCS used within this campaign.

**Column PrevCallBackW**

The previous weight of the priority parameter value for callback records that OCS used in this campaign.

**Column SchedN**

The current numerical value of the priority parameter that OCS used for scheduled records in this campaign.

**Column PrevSchedN**

The previous value of the priority parameter that OCS used for scheduled records in this campaign.

**Column SchedW**

The current weight of the priority parameter value for scheduled records that OCS used in this campaign.

**Column PrevSchedW**

The previous weight of the priority parameter value for scheduled records that OCS used within this campaign.

**Column PrevPPEnter**

The GMT-equivalent date and time when the previous priority parameters were reported by OCS.

**Column PrevPPEnter\_ts**

The UTC-equivalent value of the PREVPPENTER field. Milliseconds are truncated.

**Column PrevPPEnter\_tcode**

A reference, derived from the value of the PREVPPENTER\_TS field, to a record in the G\_TIMECODE table.

**Column Added**

The GMT-equivalent date and time when any change of a parameter is reported by OCS.

**Column Added\_ts**

The UTC-equivalent value of the ADDED field. Milliseconds are truncated.

**Column Added\_tcode**

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

**Table GO\_Campaign**

This table contains current information about a Campaign, as reported by OCS. Records are inserted into this table when the first OCSD event that is related to campaign processing attempts is received from OCS. The record is updated each time that information about changes to Campaign state or Campaign properties are received from OCS.

Refer to “Campaign Model” of the *Interaction Concentrator User’s Guide* for an illustrative graphic of the Genesys Campaign Finite State Machine.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column SessID

The unique identifier of the Campaign processing attempt. If a campaign has been unloaded and then reloaded, OCS assigns a new SessionGUID.

### Column CampaignID

The DBID of the Campaign configuration object that OCS uses for the Campaign processing attempt.

### Column GroupID

The DBID of the Campaign Group configuration object.

### Column State

The current state of the campaign according to the Campaign FSM (finite state machine). One of the following values:

- 0 - null (Terminated)
- 1 - loaded
- 2 - started
- 3 - unloading

#DICTIONARY TYPE 71

### Column OCSID

The DBID of the OCS Server application in the Configuration Database. The Campaign running on this instance of OCS.

### Column DialMode

The running mode of the campaign as reported by OCS.

### Column OptimMode

The optimization mode of the campaign with OCS running.

### Column OptimValue

The value of the optimization parameter used by OCS in this campaign.

### Column GeneralN

The numerical value of the priority parameter that OCS uses for general records in this campaign.

### Column GeneralW

The weight of the priority parameter value for general records that OCS uses in this campaign.

### Column SchedN

The numerical value of the priority parameter that OCS uses for scheduled records within this campaign.

### Column SchedW

The weight of the priority parameter value that OCS uses for scheduled records within this campaign.

### Column CallBackN

The numerical value of the priority parameter that OCS uses for the callback records in this campaign.

### Column CallBackW

The weight of the priority parameter value for callback records that OCS uses for this campaign.

### Column Created

The GMT-equivalent date and time that the campaign was loaded, as reported by OCS.

### Column Created\_ts

The UTC-equivalent value of the CREATED field. Milliseconds are truncated.

**Column Created\_tcode**

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

**Column Terminated**

The GMT-equivalent date and time when the campaign was unloaded, as reported by OCS.

**Column Terminated\_ts**

The timestamp of when the campaign was terminated. In seconds (milliseconds truncated).

**Column Terminated\_tcode**

A reference, derived from the value of the TERMINATED\_TS field, to a record in the G\_TIMECODE table.

**Column LastChanged**

The GMT-equivalent date and time of the last event from OCS, with information about change of campaign state or campaign properties.

**Column LastChanged\_ts**

The UTC-equivalent value of the LASTCHANGED field. Milliseconds are truncated.

**Column LastChanged\_tcode**

A reference, derived from the value of the LASTCHANGED\_TS field, to a record in the G\_TIMECODE table.

**Column InternalReason**

The reason the campaign was stopped, if it was stopped at all. This may be due to a failure or ICON may have detected the unavailability of reporting data for this campaign. One of the following values:

0 - normal - normal termination

1 - disconnect - termination due to disconnect

2 - internal\_error - reserved for cases of termination due to internal errors

3 - register - termination due to information in the message after registration in the OCS

## #DICTIONARY TYPE 75

### Column PrevSEnter

The GMT-equivalent date and time when the previous campaign state was detected.

### Column PrevSEnter\_ts

The UTC-equivalent value of the PREVSEnter field. Milliseconds are truncated.

### Column PrevSEnter\_tcode

A reference, derived from the value of the PREVSEnter\_TS field, to a record in the G\_TIMECODE table.

### Column Seq

Sequence number of the record within the SessID.

### Column ApplD

The DBID of the application (if provided by OCS) that initiated the state change.

### Column Trans

The number of the OCS event.

### Column Added

The GMT-equivalent date and time when the current campaign state was detected.

### Column Added\_ts

The UTC-equivalent value of the ADDED field. Milliseconds are truncated.

### Column Added\_tcode

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

## Table GO\_Chain

This table contains current information about chains, as reported by OCS. A record is inserted at the time ICON receives the first notification about Chain processing from OCS. The record is updated when there is a change of state of the chain.

Refer to “Chain Model” of the *Interaction Concentrator User’s Guide* for a description of outbound chain states and an illustrative graphic of a Chain Finite State Machine.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column ChainGUID

The unique identifier of the chain processing attempt, as reported by OCS. This ID cannot be changed during chain processing. Same as GO\_CHAIN.CHAINGUID.

### Column ParentGUID

Reserved for future use.

### Column SessID

The unique identifier of the Campaign processing attempt. See GO\_CAMPAIGN.SessID for details.

### Column CampaignID

The DBID of the Campaign configuration object in the Configuration Database. This ID cannot be changed during chain processing. This has the same value as the related record in GO\_Campaign. It is added as part of the database de-normalization process.

### Column GroupID

The DBID of the Campaign group configuration object.

### Column CallingListID

The DBID of the Calling List object in the Configuration Database. This ID cannot be changed during chain processing.

### Column OCSID

The DBID of the configured OCS application that reports activity related to this chain.

### Column CPDID

The DBID of the CPD server configuration object that OCS used to process the chain (if used and reported by OCS).

### Column RecordHandle

The RecordHandle of the record that OCS used in the last chain processing attempt.

### Column State

The state of the chain as reported by chain FSM (finite state machine). One of the following values:

- 0 - null - unloaded/terminated
- 1 - scheduled
- 2 - processing
- 3 - processed

#DICTIONARY TYPE 76

### Column LastCallAttID

The CallAttemptGUID generated by OCS for the last voice call that OCS tried to produce during the chain processing attempt.

### Column SwitchID

The DBID of the switch configuration object during the OCS produced outbound call during the last chain processing attempt (if known and reported by OCS).

### Column CPDResult

The CPD result from the last chain processing attempt (if known and reported by OCS).

### Column CallResult

The call result from the last chain processing attempt.

### Column Created

The GMT-equivalent date and time of Event Loaded as reported by OCS.

### Column Created\_ts

The UTC-equivalent value of the CREATED field. Milliseconds are truncated.

### Column Created\_tcode

A reference, derived from the value of the CREATED\_TS field, to a record in the G\_TIMECODE table.

### Column Terminated

The GMT-equivalent date and time when the chain was finalized or unloaded, as reported by OCS.

### Column Terminated\_ts

The UTC-equivalent value of the TERMINATED field. Milliseconds are truncated.

### Column Terminated\_tcode

A reference, derived from the value of the TERMINATED\_TS field, to a record in the G\_TIMECODE table.

### Column LastChanged

The GMT-equivalent date and time of the last change of state of the chain, as reported by OCS in OCSD event.

### Column LastChanged\_ts

The UTC-equivalent value of the LASTCHANGED field. Milliseconds are truncated.

### Column LastChanged\_tcode

A reference, derived from the value of the LASTCHANGED\_TS field, to a record in the G\_TIMECODE table.

#### #DICTIONARY TYPE 75

##### Column AgentID

The DBID of the agent (person) configuration object that sent a request which produced activity in the OCS that resulted in a record being inserted into this table. This occurs only if the activity is known by OCS and is reported to ICON.

### Column EndpointID

The DBID of the DN configuration object from the agent that sent a request to OCS. See AGENTID, above. This occurs only if the activity is known by OCS and is reported to ICON.

### Column DialingFilterID

The DBID of the Dialing filter configuration object that OCS used if applicable activity is reported by OCS.

### Column RecordType

The record type as reported by OCS.

### Column TreatmentID

The DBID of the Treatment configuration object, as reported by OCS.

### Column DialMode

The dial mode of the campaign that OCS used to produce outbound activity.

### Column Attempt

The sequence number of the chain processing attempt.

### Column SwitchId

The DBID of the switch configuration object from OCS that produced activity during campaign processing.

### Column CallAttID

The call attempt GUID. This is generated and assigned by OCS. The GUID is unique for each outbound call producing attempt.

### Column CPDResult

The CPD result, as reported by OCS.

### Column CallResult

The GMT-equivalent date and time when the chain state was inserted into this table, as reported by OCS. One of the following values:

- 0 - Ok
- 3 - General Error
- 4- System Error
- 6- Busy
- 7 - No Answer
- 8 - SIT Detected
- 9 - Answering Machine Detected

10 - All Trunks Busy

52 - Cancel Record  
53 - Wrong Number

#### Column Added

The GMT-equivalent date and time when the change in chain state was added to this table, as reported by OCS.

#### Column Added\_ts

The UTC-equivalent value of the ADDED field. Milliseconds are truncated.

#### Column Added\_tcode

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

## Table GO\_Custom\_Fields

This table contains information about the content of the custom defined fields for storage in ICON.

**Warning!** These are not configured as protected fields. Records are inserted in this table when the load of the record is reported by OCS. The records contain the current and last values of the fields. The record is updated when the field changes.

Same as GO\_CHAINREC\_HIST.SEQ.

### Column LastChanged

The GMT-equivalent last date and time when information about the field was reported by OCS.

### Column LastChanged\_ts

The UTC-equivalent value of the LASTCHANGED field. Milliseconds are truncated.

### Column LastChanged\_tcode

A reference, derived from the value of the LASTCHANGED\_TS field, to a record in the G\_TIMECODE table.

### Column Loaded

The GMT-equivalent date and time when the record from which this field is taken was loaded by OCS.

### Column Loaded\_ts

The UTC-equivalent value of the LOADED field. Milliseconds are truncated.

### Column Loaded\_tcode

A reference, derived from the value of the LOADED\_TS field, to a record in the G\_TIMECODE table.

### Column Unloaded

The GMT-equivalent date and time when the record from this field was unloaded by OCS.

### Column Unloaded\_ts

The UTC-equivalent value of the UNLOADED field. Milliseconds are truncated.

### Column Unloaded\_tcode

A reference, derived from the value of the UNLOADED\_TS field, to a record in the G\_TIMECODE table.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column ChainGUID

The unique identifier of the chain processing attempt, as reported by OCS. This ID cannot to be changed during chain processing. Same as GO\_CHAIN.CHAINGUID.

### Column RecordHandle

The record handle of the record taken from this custom field.

### Column FieldID

The DBID of the Field configuration object.

**Column OldValue**

The previous value of the field. On record load time the value is “null”.

**Column NewValue**

The new value of the field.

**Column PrevEnter**

The GMT-equivalent date and time when the previous value of the field was reported by OCS.

**Column PrevEnter\_ts**

The UTC-equivalent value of the PREVENTER field. Milliseconds are truncated.

**Column PrevEnter\_tcode**

A reference, derived from the value of the PREVENTER\_TS field, to a record in the G\_TIMECODE table.

**Column Seq**

The sequence number of the record within the field change history.

**Column ChainHistSeq**

Same as GO\_CHAINREC\_HIST.SEQ.

**Column CallAttID**

The call attempt GUID. This is generated and assigned by OCS. The GUID is unique for each outbound call producing attempt. Same as GO\_CHAINREC\_HIST.CALLATTID.

**Column Added**

The GMT-equivalent date and time when the change of the field was reported by OCS. This is taken from the Outbound Contact Server event.

**Column Added\_ts**

The UTC-equivalent value of the ADDED field. Milliseconds are truncated.

**Column Added\_tcode**

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

**Table GO\_Metrics**

This table contains the current and latest values of pre-calculated OCS metrics. Records are inserted at the time

ICON receives metric information. The information includes the specified type the first time that the combination of objects is specified. The record is updated each time ICON receives changes to metric data.

Refer to the “Integration with Outbound Contact” chapter in the *Interaction Concentrator User’s Guide* for a description of the pre-calculated metrics that ICON stores for OCS.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column SessID

The unique identifier of the Campaign processing attempt. If a campaign has been unloaded and then reloaded, OCS assigns a new SessionGUID. Same as GO\_CAMPAIGN.SESSID.

### Column CallingListID

The DBID of the Calling List object in the Configuration Database. This ID cannot be changed during chain processing. Same as GO\_CHAIN.CALLINGLISTID.

### Column ChainGUID

The unique identifier of the chain processing attempt, as reported by OCS. This ID cannot to be changed during chain processing. Same as GO\_CHAIN.CHAINGUID.

### Column CallAttID

The CallAttemptGUID generated by OCS for the last voice call that OCS tried to produce during the chain processing attempt. Same as GO\_CHAIN.LASTCALLATTID.

### Column OCSID

The DBID of the configured OCS application that reported activity related to this metric.

### Column RecordHandle

The RecordHandle of the record that OCS used in the last chain processing attempt. Same as GO\_CHAIN.RECORDHANDLE.

### Column ResID1

Reserved

### Column ResID2

Reserved

### Column Type

The type of metric. One of the following values:

0 - GOMetricTypeUndefined - Reserved

1 - GOMetricTotalRecsPerList - Total number of physical records in the calling list database view (i.e. database table + optional WHERE clause from the dialing filter)

2 - GOMetricTotalRecsPerCampGr - Total number of physical records in all database views (see above) whose calling lists are assigned to the campaign participating in the campaign group

3 - GOMetricTotalChainsPerList - Total number of logical chains in the calling list database view (i.e. database table + optional WHERE clause from the dialing filter). A logical chain is defined as 1 or more database table records bearing the same Chain ID value

4 - GOMetricTotalChainsPerCampGr - Total number of logical chains in all database views (see above) whose calling lists are assigned to the campaign participating in the campaign group

5 - GOMetricCurrRecsNotProcPerList - Current number of physical records in the calling list database view (i.e. database table + optional WHERE clause from the dialing filter) which have type GENERAL and status READ

6 - GOMetricCurrRecsNotProcPerCampGr - Current number of physical records in all database views (see above) which have type GENERAL and status READY, whose calling lists are assigned to the campaign participating in the campaign group

7 - GOMetricCurrChainsNotProcPerList - Current number of logical chains in the calling list database view (i.e. database table + optional WHERE clause from the dialing filter) where at least 1 record of the chain has type

GENERAL and status READY. Logical chain is defined as 1 or more database table records bearing the same Chain ID value

8 - GOMetricCurrChainsNotProcPerCampGr - Current number of logical chains in all database views (see above) where at least 1 record of the chain has type GENERAL and status READY, and whose calling lists are assigned to the campaign participating in the campaign group

9 - GOMetricCurrUsedPortsPerCampGr - Current number of busy (currently occupied for placing outbound calls) CPD Server ports or Switch call classifier ports

10 - GOMetricCurrUsedEngPortsPerCampGr - Current number of ports used by engaged calls placed by CPD Server. Calculated only for campaign groups activated in ASM dialing modes with CPD Server

11 - GOMetricDetailCallsOverdialed - The metric shows that the given call is considered to be overdialed by Outbound Dialing Engine

12 - GOMetricTimeOutboundCallDialing - Dialing Duration (in msec). Calculated by OCS for each outbound call

13 - GOMetricTimeOutboundCallTransfer - Call Transfer Duration (in msec). Calculated by OCS for each outbound call

14 - GOMetricTimeOutboundCallCPD - Post-connect Call Progress Detection Duration (in msec). Calculated by OCS for each outbound call

#### #DICTIONARY TYPE 77

##### Column Value

The OCS-provided value for the corresponding statistic type.

##### Column Seq

The sequence number of the metric for the same object.

##### Column USeq

Reserved

##### Column Added

The GMT-equivalent date and time when the value of the metric was reported by OCS.

##### Column Added\_ts

The UTC-equivalent value of the ADDED field. Milliseconds are truncated.

##### Column Added\_tcode

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

## Table GO\_Record

This table contains information about the content of the records as reported by OCS (mandatory fields only).

Records are inserted into this table at the time the loading of the record is reported by OCS. Records contain current and last values of the fields. Records are updated when any mandatory field changes.

For a description of each mandatory field, refer to the Outbound Contact Server documentation set.

### Column ID

The unique, autonumbered ID of this record in the table. This is the primary key.

### Column ChainGUID

The unique identifier of the chain processing attempt, as reported by OCS. This ID cannot to be changed during chain processing. Same as GO\_CHAIN.CHAINGUID.

### Column RecordHandle

The record handle taken from the record of this custom field.

### Column M\_chain\_id

The unique identification number of the chain to which the record belongs.

### Column M\_chain\_n

The unique identification number of the record within the chain.

### Column M\_agent\_id

The login identifier of the agent who handled the record.

### Column M\_call\_result

Final outcome of the record processing. Refer to the “Call Result Types” table in the *Outbound Contact Reference Manual* for additional information.

### Column M\_call\_time

Latest date and time the record has been processed (dialed), in UTC format.

### Column M\_daily\_from

Earliest time of the day when a customer can be contacted (seconds since midnight).

### Column M\_daily\_till

Latest time of the day when a customer can be contacted (seconds since midnight).

### Column M\_dial\_sched\_time

Date and time for which the processing of the record has been scheduled or rescheduled, in UTC format.

**Column M\_contact\_info**

The customer's contact information, which is the phone number in the voice campaign.

**Column M\_contact\_infotype**

Type of contact information, phone type in the voice campaign. Refer to the “Contact Information Types” table in the *Outbound Contact Reference Manual* for additional information.

**Column M\_record\_id**

The unique identification number of a calling record.

**Column M\_record\_status**

The current status of the record. Refer to the “Record Statuses” table in the *Outbound Contact Reference Manual* for additional information.

**Column M\_record\_type**

The type of the record. Refer to the “Record Types” table in the *Outbound Contact Reference Manual* for additional information.

**Column M\_tz\_dbid**

The configuration DBID of the time zone object associated with the calling record.

**Column M\_app\_id**

Reserved for future use.

**Column M\_campaign\_id**

The configuration DBID of the Outbound Dialing Campaign as a part of which the record has been processed.

**Column M\_email\_subject**

Reserved for future use.

**Column M\_email\_templateid**

Reserved for future use.

**Column M\_group\_id**

Reserved for future use.

**Column M\_media\_ref**

Reserved for future use.

#### Column M\_switch\_id

The DBID of the switch where the agent who handled the record logged in.

#### Column M\_treatments

Treatments application history. For more information, refer to the “Treatments” chapter in the *Outbound Contact 7.5+ Deployment Guide*.

#### Column LastChainUpdSeq

Same as GO\_CHAINREC\_HIST.SEQ.

#### Column LastChanged

The GMT-equivalent date and time when the change to any mandatory field in the record was reported by OCS. This is taken from the Outbound Contact Server event.

#### Column LastChanged\_ts

The UTC-equivalent value of the LASTCHANGED field. Milliseconds are truncated.

#### Column LastChanged\_tcode

A reference, derived from the value of the LASTCHANGED\_TS field, to a record in the G\_TIMECODE table.

#### Column Loaded

The GMT-equivalent date and time when the record taken from this field was loaded by OCS.

#### Column Loaded\_ts

The UTC-equivalent value of the LOADED field. Milliseconds are truncated.

#### Column Loaded\_tcode

A reference, derived from the value of the LOADED\_TS field, to a record in the G\_TIMECODE table.

#### Column Unloaded

The GMT-equivalent date and time when the record taken from this field was unloaded by OCS.

#### Column Unloaded\_ts

The UTC-equivalent value of the UNLOADED field. Milliseconds are truncated.

#### Column Unloaded\_tcode

A reference, derived from the value of the UNLOADED\_TS field, to a record in the G\_TIMECODE table.

The unique identifier of the chain processing attempt, as reported by OCS. This ID cannot to be changed during chain processing. Same as GO\_CHAIN.CHAINGUID.

### Column RecordHandle

The record handle taken from the record of this custom field.

**Column FieldID**

The DBID of the Field configuration object.

**Column OldValue**

The previous value of the field. On record load time, the value is “null”.

**Column NewValue**

The new value of the field.

**Column PrevEnter**

The GMT-equivalent date and time when the previous value of the field was reported by OCS.

**Column PrevEnter\_ts**

The UTC-equivalent value of the PREVENTER field. Milliseconds are truncated.

The GMT-equivalent date and time when the change of the field was reported by OCS. This is taken from the Outbound Contact Server event.

**Column Added\_ts**

The UTC-equivalent value of the ADDED field. Milliseconds are truncated.

**Column Added\_tcode**

A reference, derived from the value of the ADDED\_TS field, to a record in the G\_TIMECODE table.

## Table GO\_Secure\_Fields

This table contains information regarding the content of the custom defined fields that are configured to be stored in ICON. They are configured as protected fields. Records are inserted into this table when the load of the record is reported by OCS. The records contain current and last values of the fields. Records are updated at the time that a field changes.

### Column RecordHandle

The record handle of the record taken from this custom field.

### Column FieldID

The DBID of the Field configuration object.

### Column Value

The value of the field.

### Column LastChainUpdSeq

This is equal to the value of the seq field seq in the related record in GO\_CHAINREC\_HIST.

### Column LastChanged

The GMT-equivalent date and time when information about the field was last reported by OCS.

### Column LastChanged\_ts

The UTC-equivalent value of the LASTCHANGED field. Milliseconds are truncated.

### Column LastChanged\_tcode

A reference, derived from the value of the LASTCHANGED\_TS field, to a record in the G\_TIMECODE table.

### Column Loaded

The GMT-equivalent date and time when the record taken from this field was loaded by OCS.

### Column ID

The unique, autonumbered ID of the record. This is the primary key.

### Column CALLID

The Multimedia interaction ID having the same value as that stored in the CALLID field of the G\_CALL table.

### Column G\_FROM\_NAME

The value of the From Name logical key, which corresponds to the mcr-from-name logical name.

### Column G\_CALLED\_BACK

The value of the Called Back logical key, which corresponds to the mcr-called-back logical name.

### Column G\_SUBJECT

The value of the Subject logical key, which corresponds to the mcr-subject logical name.

### Column G\_ORIGIN\_SOURCE

The value of the Origination Source logical key, which corresponds to the mcr-origin-source logical name.

**Column G\_FROM\_ADDRESS**

The value of the From Email Address logical key, which corresponds to the mcr-from-address logical name.

**Column G\_SUB\_TYPE**

The value of the Interaction Sub Type logical key.

**Column G\_RECEIVED\_D**

The GMT-equivalent time when the email interaction was downloaded by the multimedia Email Server.

**Column G\_RECEIVED\_TS**

The UTC-equivalent value of the G\_RECEIVED\_D field.

**Column G\_RECEIVED\_TCODE**

### Column ID

The unique, autonumbered ID of the virtual queue record. This is the primary key. Autonumbering is controlled by the RDBMS.

### Column VQID

Uniquely identifies each virtual queue record, corresponding to the EventQueued/EventDiverted or EventQueued/EventAbandoned pairs of TEvents.

### Column VQDN

The directory number of the virtual queue, as configured in Configuration Server, where the interaction was queued.

### Column VQDNID

The DBID of the virtual queue where the interaction was queued.

### Column VQSwitchID

The DBID of the switch where the virtual queue is configured.

### Column OrigCallID

The reference to the original call, by CALLID, for which the EventQueued TEvent was reported.

## Column Status

The current status of the virtual queue record, represented by one of the following Call Control Event dictionary types:

- 1 - cleared. Call or interaction was either abandoned or diverted with causes other than 1 (normal call delivery) as noted in the description of column CAUSE.
- 8 - queued
- 13 - diverted with value cause = 1 (normal call delivery ) in column CAUSE.

#DICTIONARY TYPE 30

## Column Cause

The cause leading to the status change in the association between the call interaction and the virtual queue, represented by one of the following VQCause dictionary types:

- 1 - normal
- 2 - abandoned
- 3 - stuck
- 101 - routed from a parallel virtual queue to the target destination
- 102 - routed by URS to the default destination
- 103 - routed by the switch to the default destination
- 104 - execute clear target
- 105 - other
- 133 - routing timeout expired on Interaction Server (for open media interactions only)
- 134 - interaction is taken (pulled out) from strategy by Interaction Server (for open media interactions only)

#DICTIONARY TYPE 85

## Column Created

The GMT-equivalent date and time when the record was created, as inherited from the EventQueued TEvent.

## Column Created\_ts

The UTC-equivalent value of the CREATED field.

## Column Created\_tcode

A reference, derived from the value of the CREATED\_TS field, to record in G\_TIMECODE table.

### Column Terminated

The GMT-equivalent date and time when the record was terminated, as inherited from either the EventDiverted or EventAbandoned TEvents.

### Column Terminated\_ts

The UTC-equivalent value of the TERMINATED field.

### Column Terminated\_tcode

A reference, derived from the value of the TERMINATED\_TS field, to record in G\_TIMECODE table.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column CallID

This field points to the record in the G\_CALL table that represents the call with which the data is associated. This field may be NULL.

### Column PartyID

This field points to the record in the G\_PARTY table that represents the party with which the data is associated. This field may be NULL.

### Column PSEQ

The sequence that corresponds to a record in the G\_PARTY\_HISTORY table.

### Column EndpointID

This field contains the DBID of the endpoint that added, changed, or deleted the data. If the data was taken from the event that caused the creation of the respective call, then this is the first party created in the call. If the data was taken from the AttachedDataChangedEvent, then the party is defined by the ThirdPartyDN attribute, if any exist. Otherwise, this is the party that is defined by the ThisDN attribute (if any). For other changes, the party is defined by the ThisDN attribute.

### Column EndpointDN

The device number that is associated with the data.

### Column AgentID

The DBID of the agent object that represents the person who changed the data. This is the agent who logged into the endpoint that is associated with the data change (if this information is available during run time).

### Column SwitchID

The DBID of the Switch object that owns the endpoint that is associated with the change. If the EndpointID field is NULL, then so is this field, and vice versa.

### Column TenantID

The DBID of the Tenant that is associated with the Switch.

### Column Added

The GMT-equivalent date and time when the key was changed. The date and time are taken from the T-Server (or other data provider) notification.

**Column Added\_ts**

The UTC-equivalent value of the ADDED field.

**Column Added\_tcode**

A reference, derived from the value in the ADDED\_TS field, to a record in the G\_TIMECODE table.

**Column CUST\_DATA\_1 through CUST\_DATA\_19**

The values of the cust-data-1 through cust-data-19 attributes of userdata

**Table G\_CUSTOM\_DATA\_S**

This table records the changes to the user data that is associated with a voice call. Primarily, this is the data that is attached to the call (the content of the UserData attribute of a T-Server Event). However, it is assumed that ICON might be configured so that it will also use this table to record the history of the Reasons and Extensions as well as any other attributes of a call that are not recorded in the G\_CALL\_HISTORY and the G\_PARTY\_HISTORY tables. The only prerequisite for this table is that the data be associated with the call and that this association be known at run time.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column CallID

This field points to the record in the G\_CALL table that represents the call with which the data is associated. This field may be NULL.

### Column PartyID

This field points to the record in the G\_PARTY table that represents the party with which the data is associated. This field may be NULL.

### Column PSEQ

The sequence that corresponds to the G\_PARTY\_HISTORY.

### Column EndPointID

This field contains the DBID of the endpoint that added, changed, or deleted the data. If the data was taken from the event that caused the creation of the respective call, then this is the first party created in the call. If the data was taken from the AttachedDataChangedEvent, then the party is defined by the ThirdPartyDN attribute, if any exist. Otherwise, this is the party that is defined by the ThisDN attribute (if any). For the rest of changes, the party is defined by the ThisDN attribute.

### Column EndPointDN

The device number that is associated with the data.

### Column AgentID

This field contains the DBID of the agent object that represents the person who changed the data. This is the agent who logged in to the endpoint that is associated with the data change (if this information is available during run time).

### Column SwitchID

This field contains the DBID of the Switch object that owns the endpoint that is associated with the change. If the EndPointID field is NULL, then so is the field SwitchID, and *vice versa*.

### Column TenantID

The DBID of the Tenant that is associated with the Switch.

### Column KeyName

This is the KeyName field. It records the name of the user data key that changed its value. The user determines which keys should be recorded by specifying them in the Call Concentrator configuration user data specification. Key names defined in the custom states configuration options should be specified in one option only--it should be

unique across all configuration options.

### Column Value

This field contains the character value of the key. The value is non-NULL unless one of the following conditions is met:

DataType != STRING or  
ChangeType = DELETED  
Otherwise, the value is NULL.

### Column Added

The GMT-equivalent date and time when the key was changed. The date and time are taken from the T-Server (or other data provider) notification.

### Column Added\_ts

The UTC-equivalent value of the ADDED field.

### Column Added\_tcode

A reference, derived from the value in the ADDED\_TS field, to a record in the G\_TIMECODE table.

## Table G\_CUSTOM\_STATES

This table contains detailed information about an agent's state changes during his or her login session. The records inserted into this table include:

- changes to the agent's state.
- changes to the agent's pending state.
- changes to the agent's workmode.
- changes to the agent's hardware reason code.
- the fact that the agent connects or disconnects to a call

### Column TenantID

The DBID of the Tenant that is associated with the Switch.

### Column StateCode

State of the agent on device (endpointid) against queue (queueid), or previous state in G\_AGENT\_STATE\_HISTORY table. One of the following values:

- 0 - null - agent is logged off
- 1 - login - agent is logged in, but no information to indicate whether the agent is ready to receive calls
- 2 - notready - agent is not ready to receive calls
- 3 - ready - agent is ready to receive calls
- 4 - acw - agent is in after call work state
- 5 - busy - agent is on the call
- 6 - unknown - agent's login session is present, but ICON has no information about the agent's state (due to disconnect from T-Server, etc)

### #DICTIONARY TYPE 16

### Column CUST\_DATA\_1 through CUST\_DATA\_19

The values of the cust-data-1 through cust-data-19 attributes of userdata.

### Column Added

The GMT-equivalent date and time when information about an agent's change of agent's state was detected.

### Column Added\_ts

The UTC-equivalent value of the ADDED field.

### Column Added\_tcode

A reference, derived from the value in the ADDED\_TS field, to a record in the G\_TIMECODE table.

### Column Terminated

The GMT-equivalent date and time when the party was released from the call.

### Column Terminated\_ts

The UTC-equivalent value of the TERMINATED field.

### Column Terminated\_tcode

A reference, derived from the value in the TERMINATED\_TS field, to a record in the G\_TIMECODE table.

### Column ID

The unique, autonumbered ID of this record. This is the primary key.

### Column CALLID

Global unique call ID.

### Column CALL\_TS

The timestamp of call creation.

### Column Switch\_ID

The DBID of the Switch configuration object in Configuration Server where the call was observed.

**Column Tenant\_ID**

The DBID of the Tenant where the Switch is configured.

**Column C\_INT\_1 through C\_INT\_34**

The integer values of attached data key.

**Column C\_STR\_1 through C\_STR\_34**

The string values of the call attached data key.
