#### **About Genesys**

Genesys is the world's leading provider of customer service and contact center software - with more than 4,000 customers in 80 countries. Drawing on its more than 20 years of customer service innovation and experience, Genesys is uniquely positioned to help companies bring their people, insights and customer channels together to effectively drive today's customer conversation. Genesys software directs more than 100 million interactions every day, maximizing the value of customer engagement and differentiating the experience by driving personalization and multi-channel customer service - and extending customer service across the enterprise to optimize processes and the performance of customer-facing employees. Go to www.genesyslab.com for more information.

Each product has its own documentation for online viewing at the Genesys Technical Support website or on the Documentation Library DVD, which is available from Genesys upon request. For more information, contact your sales representative.

#### Notice

Although reasonable effort is made to ensure that the information in this document is complete and accurate at the time of release, Genesys Telecommunications Laboratories, Inc., cannot assume responsibility for any existing errors. Changes and/or corrections to the information contained in this document may be incorporated in future versions.

#### Your Responsibility for Your System's Security

You are responsible for the security of your system. Product administration to prevent unauthorized use is your responsibility. Your system administrator should read all documents provided with this product to fully understand the features available that reduce your risk of incurring charges for unlicensed use of Genesys products.

# Preface

Welcome to the Genesys *Performance Management Advisors 8.1 Frontline Advisor Administration User's Guide.* This document describes system administration functions for the Frontline Advisor parts of the Genesys Performance Management Advisors solution.

This document is valid only for 8.1.x releases of this product.

**Note:** For versions of this document created for other releases of this product, visit the Genesys Technical Support website, or request the Documentation Library DVD, which you can order by e-mail from Genesys Order Management at <u>orderman@genesyslab.com</u>.

This preface contains the following sections:

- About Frontline Advisor, page 9
- Intended Audience, page 10
- Making Comments on This Document, page 10
- Contacting Genesys Technical Support, page 10
- Document Change History, page 11

For information about related resources and about the conventions that are used in this document, see the supplementary material starting on page 95.

# **About Frontline Advisor**

Frontline Advisor improves both agent performance and customer satisfaction by giving agents a real-time view of their activity. Customizable alerts draw immediate attention to performance-related activity, good, or otherwise.

The real-time data enables agents to correct problems and reinforce progress as it happens, not after the break or during the next shift. Frontline Advisor puts everything agents need to pay attention to in a single location, so they can capture the priority issues and quickly direct their attention to areas that may require attention.

Current status, performance, behavioral- or activity-based data can be presented in customized views. Sophisticated, configurable business rules monitor key performance indicators and call attention to situations requiring immediate attention.

The alert activity in Frontline Advisor makes agent activity trends more obvious.

Frontline Advisor is designed to help agents raise their performance, allowing them to instantly identify activities that need correction or additional training, as well as areas where agents are performing optimally.

# **Intended Audience**

This document is primarily intended for users of Frontline Advisors who have administrator privileges. It has been written with the assumption that you have a basic understanding of:

- Computer-telephony integration (CTI) concepts, processes, terminology, and applications
- Network design and operation
- Your own network configurations

# **Making Comments on This Document**

If you especially like or dislike anything about this document, feel free to e-mail your comments to <u>Techpubs.webadmin@genesyslab.com</u>.

You can comment on what you regard as specific errors or omissions, and on the accuracy, organization, subject matter, or completeness of this document. Please limit your comments to the scope of this document only and to the way in which the information is presented. Contact your Genesys Account Representative or Genesys Technical Support if you have suggestions about the product itself.

When you send us comments, you grant Genesys a nonexclusive right to use or distribute your comments in any way it believes appropriate, without incurring any obligation to you.

# **Contacting Genesys Technical Support**

If you have purchased support directly from Genesys, please contact <u>Genesys</u> <u>Technical Support</u>.

Before contacting technical support, please refer to the <u>Genesys Care Program</u> <u>Guide</u> for complete contact information and procedures.

# **Document Change History**

This section describes information that has been added or substantially changed since the first release of this document.

# Release 8.1.401.00

- New source and computed performance metrics are added. For more information, see Appendix A on page 37 and Appendix B on page 57.
  - The following source metrics are enabled when you migrate to Release 8.1.4:
    - Total Not Ready Time
    - Total Outbound ACW Time
    - Total Other ACD Time
    - Total ACW Time
    - Total Ready Time
    - Total Number of Outbound Calls
    - Total Number of Consult Calls
    - Total Number of Internal Calls
    - Total Time In Outbound Calls
    - Total Time In Consult Calls
    - Total Time In Internal Calls
  - The following source metrics are disabled when you migrate to Release 8.1.4. You must use filters to enable these metrics:
    - Total Not Ready Time Type *X*
    - Total ACD Inbound ACW Time
    - Total Non ACD Inbound ACW Time
    - Total Number of ACD Calls
    - Total Number of Non ACD Calls
    - Total Time In ACD Calls
    - Total Time In Non ACD Calls
  - **Note:** New aggregated metrics that are dependent on a filtered agent-level metric are also disabled until you configure the filters. For information about enabling the filters, see *Genesys Performance Management Advisors 8.1 Deployment Guide*.

# Release 8.1.301.00

- Role-Based Access Control There are additional privileges for Frontline Advisor:
  - FrontlineAdvisor.SupervisorDashboard.TeamsPane.canSort

- FrontlineAdvisor.SupervisorDashboard.TeamAlertsPane.canSort
- FrontlineAdvisor.SupervisorDashboard.AgentAlertsPane.canSort

For descriptions of privileges, see "List of Frontline Advisor Privileges" on page 18.

**Note:** These new privileges are not defined in any existing Advisors role in the Configuration Server settings. If you are migrating from Advisors Release 8.1.2, an administrative user must update existing roles, or create new roles, and add the privileges to allow the described access or activity.

- The Procedure for defining rules now includes a note about character limitations in descriptions. See Procedure: Defining a rule, on page 31.
- The list of agent metrics that display on the Frontline Advisor user interface now includes a note about the relationship between agent state threshold settings and source metrics. See "Metrics for Agents" on page 49.

# Release 8.1.201.00

- Appendices with details of Frontline Advisor metrics have been added— See Appendix A, "Frontline Advisor Metrics," on page 37 and Appendix B on page 57.
- Other appendices have been consolidated into a single appendix dealing with hierarchies—Appendix C, "Working With Monitoring Hierarchies," on page 81.
- Information about role-based access control in Genesys Configuration Manager has been added—"Role-Based Access Control" on page 15.

# Release 8.1.101.00

- Administration of new time profiles
- Changes to monitoring hierarchy information

# 1

# Frontline Advisor Administration

This chapter describes how to use the Frontline Advisor (FA) Administration module (Figure 1 on page 14) to add or update thresholds and rules for a specific set of metrics, as well as define system-level settings.

It contains the following sections:

- Using the FA Administration Module, page 13
- Role-Based Access Control, page 15
- Monitoring Hierarchy Overview, page 20
- Defining Conditions for Metrics, page 22
- Defining Conditions to Monitor Agent Statistics, page 27
- Settings, page 32
- Navigation, page 34

# **Using the FA Administration Module**

Thresholds and rules continuously evaluate metrics, issue alerts, and help to focus the attention of supervisors onto the most important issues affecting their agents' performance and behavior. Each threshold checks one measured value at a point in time and triggers when the value falls within a pre-set range. Rules add another layer of sophistication by calling trigger functions that do more than simple range checking at points in time. Rules can count events throughout an interval of time, which allows them to trigger on the frequency of events.

Thresholds and rules should be aimed at highlighting significant situations and be very purposeful. Ideally, the number of alerts should be low: one or two per agent per day would lead to very effective coaching. Rules could monitor only one or two types of situations a week. Then the rules could be changed to tighten the triggering numbers in a future week (to "raise the bar"). For a suggested coaching strategy see "Tailoring a Coaching Strategy" on page 92.

	o					

Figure 1: Administration Console

Note:	The Settings tab is displayed only if the user has explicit role-based access to it granted by an administrator. If such access is granted, it is granted to all settings, not just the ones that relate to the manager's team of agents.
	In the Thresholds tab, the user can view and/or override only thresholds where they have access to the corresponding metric.
	Access to the metrics and levels in the hierarchy also determines which metrics and levels the user sees in the Administration module. See "Role-Based Access Control" on page 15.

When a threshold is exceeded, the triggered threshold changes the appropriate text to red. When a rule is triggered, the rule creates an alert and posts it to the Manager Console. The status is visually represented:

**O** Red indicates an active rule alert.

Threshold violations are visible at all levels of the hierarchy, not just at the agent levels. The actual violation at the agent level is highlighted in a solid color and the rolled-up violation at the group level is highlighted in a shaded color. Rule alerts roll up through all levels of the hierarchy; the value that rolls up is the count of active alerts.

Active alerts are those alerts for which the agent is still in violation of the rule. Inactive alerts are those alerts for which the agent has corrected his/her behavior and is not in violation of the rule any more. Inactive alerts are cleared when the agent keeps his behavior corrected and does not violate the rule for a time governed by the rule's time period.

This visibility provides a view of the overall performance for managers, directors, and vice presidents.

The Administration Console is where the administrator enters the threshold and rule values. The administrator can choose what rules and thresholds apply to each agent, manager or group (also called nodes) in the monitoring hierarchy and enable or disable the threshold or rules for each. Based on the settings made in the Administrator console, the appropriate alerts are displayed in the Frontline Advisor and Agent Advisor consoles.

# **Role-Based Access Control**

*Roles* are introduced in release 8.1.2 to refine the level of access that users have to metrics and levels in the hierarchies, and business objects such as the Teams pane, the Team and Agent Alerts panes and the column chooser. Roles are defined, maintained, and associated to users in the Genesys Configuration Server. Please refer to the *Performance Management Advisors 8.1 Contact Center Advisor/Workforce Advisor Administrator User's Guide* for more information.

## **Hierarchy Access**

When managers log in to the dashboard or the Frontline Advisor Administration module, they are presented with a customized view of agent groups and agents relevant to them. However, it is no longer assumed that managers can then navigate to all child nodes simply because they have access to the parent, and vice versa.

So, for example, a group leader sees all teams and agents under them, but might see only the aggregated values at higher-level nodes in the hierarchy.

In order to perform threshold or rule overrides at a given node, the manager must have explicit *change* permission for that node granted by an administrator in the Genesys Configuration Manager. In the above example, the group leader could be granted change access at the group level and below, but not at higher level nodes (which would affect other groups not even visible to that group leader).

# Settings

Frontline Advisor users are granted or denied access to settings based on their role-based access, which is configured by an administrator in Genesys Configuration Manager.

In the Frontline Advisor Administration module, this controls whether a user can see and work in the Settings tab. If users can view the Settings tab, they can view and maintain intervals and time profiles.

# **Hierarchy Reload Access**

If users can view the Settings tab, then they might also be able to view the Hierarchy Reload section under Settings, if they have access to the reload hierarchy.

If users have access to the Hierarchy Reload section they can press the Reload button to initiate a reload of the FA monitoring hierarchy from the Genesys Configuration Manager.

# **Frontline Advisors Privileges**

Functionality permissions, or privileges, determine what tasks or functions a user can execute on objects to which he/she has access.

Privileges are configured via roles. Privileges for each role are stored as key-value pairs in the Annex tab of that role in Genesys Configuration Manager. For example, Figure 2 on page 17 shows the Annex tab of a new role called FA Supervisor who can view the Agent Alerts pane on the Supervisor dashboard:

2. FA Supervisor [138.120.87.7:6060] Properties		×
General Members Annex Security		
See Advisors	) 🎓   🗋 🗙   🚍   🅸 📴	
Sections	Value	
Advisors	Enter text here	7
be FrontlineAdvisor.SupervisorDashboard.AgentAlertsPane.canView		_
С	Cancel Apply	Help

Figure 2: Assigning Privileges to a Role

The privileges for Advisors are bundled under a single section in the Annex tab with the title Advisors. Each privilege name uses the following general structure:

[application name].[module name].[task grouping].[privilege name]

If a privilege is present in a role, then any user assigned that role has access to the functionality controlled by that privilege.

## **Permissions for Roles**

Users should be added under the Member tab and permissions are assigned in the Security tab.

Add users with either of the following methods:

- Directly, as a member of a Role
- Indirectly, as a member of an Access Group

The user also needs to have Read access to the Role (either directly or through an Access Group).

## **Accumulation of Privileges**

Roles are cumulative. A single user or access group can have multiple roles associated with them. The privileges in these roles are cumulative.

# List of Frontline Advisor Privileges

 Table 1 lists Frontline Advisor privileges.

### Table 1: Advisors Privileges

Privilege	Behavior When Present	Behavior When Absent
FrontlineAdvisor.Supervisor Dashboard.canView	User can access the FA Supervisor Dashboard.	User cannot access the FA Supervisor dashboard, and the FA Dashboard tab is not shown to the user.
FrontlineAdvisor.Supervisor Dashboard.TeamsPane.canView (Requires the FrontlineAdvisor.Supervisor Dashboard.canView privilege)	User can see the Teams pane.	The Teams pane is hidden along with both alerts panes.
FrontlineAdvisor.Supervisor Dashboard.AlertsPane.canView	User can see the Team and Agent Alerts panes.	Neither of the alerts panes is displayed on the dashboard. If access to the Team pane is not available, the Alert pane is not shown even though user has access.
FrontlineAdvisor.Supervisor Dashboard.ColumnChooser.canView (Requires the FrontlineAdvisor.Supervisor Dashboard.canView privilege)	User can access the column chooser.	The column chooser button on the dashboard is hidden.
FrontlineAdvisor.Supervisor Dashboard.TeamsPane.canSort <sup>1</sup>	User can sort the entries in the Team pane. The cursor changes when hovering over the header of a column that can be sorted.	User cannot sort entries in the Team pane. The cursor does not change when hovering over a column header.
FrontlineAdvisor.Supervisor Dashboard.TeamAlertsPane.canSort <sup>1</sup>	User can sort the entries in the Team Alerts pane. The cursor changes when hovering over the header of a column that can be sorted.	User cannot sort entries in the Team Alerts pane. The cursor does not change when hovering over a column header.
FrontlineAdvisor.Supervisor Dashboard.AgentAlertsPane.canSort <sup>1</sup>	User can sort the entries in the Agent Alerts pane. The cursor changes when hovering over the header of a column that can be sorted.	User cannot sort entries in the Agent Alerts pane. The cursor does not change when hovering over a column header.

## Table 1: Advisors Privileges (Continued)

Privilege	Behavior When Present	Behavior When Absent
FrontlineAdvisor.Administration. canView	User can access the FA Administration module.	User cannot access the FA Administration module, and the FA Administration tab is not shown to the user.
FrontlineAdvisor.Administration. Settings.canView (Requires FrontlineAdvisor.Administration. canView privilege)	User can access the Settings tab in the FA Admin module.	Settings tab is not shown to the user.
FrontlineAdvisor.Administration. Hierarchy.canReload	User can initiate a hierarchy reload through the action on the Settings tab. (This requires the Settings tab to be accessible via the FrontlineAdvisor. Administration.Settings. canView privilege	Hierarchy reload action is not accessible.
FrontlineAdvisor.AgentDashboard. canView	User can access the FA Agent Dashboard.	User cannot access the FA Agent dashboard, and the FA Agent Dashboard tab is not shown to the user.
FrontlineAdvisor.AgentDashboard. AlertsPane.canView (Requires FrontlineAdvisor.AgentDashboard. canView privilege)	User can see the Alerts pane.	The Alerts pane is not displayed.
FrontlineAdvisor.AgentDashboard. ColumnChooser.canView (Requires FrontlineAdvisor.AgentDashboard. canView privilege)	User can see the Columns pane.	The Columns pane is not displayed.

<sup>1</sup> In a migration scenario, this privilege is not defined in any existing Advisors role in the Configuration Server settings. An administrative user must update existing roles, or create new roles, and add the privilege to allow the described access or activity.

# **Further Reading on Roles**

Additional sources of information on role-based access are:

- Genesys 8.1 Security Deployment Guide
- Genesys Administrator 8.1 Deployment Guide
- Framework 8.1 Configuration Manager Help
- Framework 8.1 Genesys Administrator Help

# **Monitoring Hierarchy Overview**

If the monitoring hierarchy is new to you, we recommend reading Appendix C, "Working With Monitoring Hierarchies," on page 81 and then coming back to this section.

**Hierarchy Loading** When FA is started, the monitoring hierarchy defined in Genesys Configuration Manager is loaded, incorporating any changes made to the hierarchy since the previous load. Since release 8.1.1, all hierarchy maintenance is performed in Genesys Configuration Manager by administrators with the required roles and permissions.

**Terminology** From release 8.1.1, the FA hierarchy consists of *groups* and *agents* instead of *supervisors, teams,* and *agents* as in previous versions.

Folders and agent groups in the Genesys Configuration Server translate to *groups* in the FA hierarchy. Folders and agent groups created in the Configuration Server have a tree structure in which a folder can have multiple sub-folders or agent groups. The agent groups contain agents. The agents present in agent groups in Configuration Server represent *agents* in the FA hierarchy.

An agent can be a member of more than one group if the hierarchy is imported from Configuration Server. If a hierarchy is imported from a third-party HR system, agents can only belong to one group.

Loading Hierarchy from the Persons Folder in Configuration Manager Generally during installation, you will specify the root for the FA hierarchy as the relevant tenant (the tenant name is case sensitive). However, it is possible during installation to specify the root for the FA hierarchy to be a Persons folder in Configuration Manager. If you do this, the hierarchy will be read and loaded from that Persons folder at FA (re)start and when the reload feature is used.

This means that the hierarchy views that are specific to a supervisor can be created, meaning that the supervisor can see only their own team's hierarchy.

This also provides the opportunity to enforce uniqueness of names at the level of sibling hierarchy nodes. This in turn means that it is possible to have nodes with the same name (for example, *Sales*) provided they do not have the same parent (that is supervisor).

# Role-Based<br/>Access Control<br/>ImpactsAccess permissions are configured at each node of the hierarchy according to<br/>roles defined for users by administrators in the Genesys Configuration<br/>Manager. These roles determine which nodes of the hierarchy each manager<br/>has access to. Users no longer have automatic access to all child nodes of<br/>parent nodes to which they have access.

Users can override rules and thresholds only for nodes that they have change access to in Configuration Manager.

When a user logs in, a customized view of the hierarchy is created for them. This view will contain only groups and agents that belong to that manager. Managers may also be able to see nodes and their aggregations that are about those of their team(s), but will require specific change access to those higher-level nodes before they can edit them.

## Enabling, Disabling, and Overriding Thresholds and Rules

At the top-level nodes of the hierarchy, the threshold or rule can be enabled or disabled. By default the top-level thresholds and rules are disabled.

If a threshold or rule is disabled at a group level, then it is disabled for all agents on that group. The nodes underneath will inherit from the closest enabled ancestor.

If a threshold or rule is disabled at an agent level, then it is disabled for only that agent. Since there are no nodes under an agent, it affects only that agent. If a threshold or rule is overridden at an agent level, then its state applies only for that agent.

The state of a threshold or rule may be overridden at any level of the hierarchy. For example, if a threshold is enabled at the agent group level, then all agents in that group for which there are no overrides will have that threshold enabled.

Impact of Role-Based Access Control With the implementation of role-based access control, managers can only enable, disable, and override thresholds and rules to which they have been granted specific change access by administrators in the Genesys Configuration Manager.

## **Navigating the Monitoring Hierarchy**

The Monitoring Hierarchy navigator is used to navigate to the area where thresholds and rules need to be viewed or modified (Figure 3). The Monitoring Hierarchy navigator lists a hierarchy of the agent and agent groups imported from the Genesys Configuration Server. Frontline Advisor imports data from the Genesys Configuration Server at startup and once every day.

**Note:** Cisco Adapter requires the agent skill ID of the agent for registering and issuing statistics. This is configured for the agent as the ExternalId.CISCO property on the Annex tab in the Advisors section of the Agent object in the Configuration Manager.

Once your monitoring hierarchy is defined (Appendix C, "Working With Monitoring Hierarchies," on page 81) and imported, administrators maintain your access to Frontline Advisor and Agent Advisor users in the Genesys Configuration Server. You can expand the hierarchy from groups down to agents; see "Expanding and Collapsing Hierarchies" on page 36, subject to your access permissions.

Figure 3: Monitoring Hierarchy Navigator

# **Defining Conditions for Metrics**

The Thresholds tab (Figure 4 on page 23) allows you to define the critical and acceptable conditions for the metrics to which you have been granted role-based access.

The standard Frontline Advisor installation provides the monitoring hierarchy with default values for all agent and group thresholds; however, you should review and change the values accordingly. An agent threshold takes precedence over the group threshold. A group threshold takes precedence over a top-level threshold. Each section lists the display name and the description of the metrics.

Note: Select a hierarchy node in order to display data in the tab.

ANR	here		Current 💌		Enable/Disable A
	0	0	30	60	Enable/Disable
AOH	0	0	60	120	Enable/Disable
AR	0	0	10	30	Enable/Disable
AT	0	0	300	600	Enable/Disable
AWR	0				

Figure 4: Thresholds Tab

Please refer to Appendix A, "Frontline Advisor Metrics," on page 37 for metrics definitions and descriptions.

# **Threshold Types**

You can configure four types of thresholds. Depending on the metric, a value may be acceptable above or below a certain value. When thresholds are triggered, they highlight cells in the Manager or Agent Console. The four text boxes are colored to provide a visual cue for the status (Figure 5). The red bars are mandatory, while the yellow text box is optional (and may be replaced by a red text box). The colors change depending on the values you type. Some rules trigger an alert if the value is below or above defined values, as shown in Table 2 and Figure 5. Red indicates a critical value range. Yellow indicates a warning value range.

If value is	Value 1	And	Value 2	Result
greater than	the value in the 4th text box			then the value is critical high (red)
greater than	the value in the 3rd text box	and less than or equal to	the value in the 4th text box	then the value is warning high (yellow)

greater than or equal to	the value in the 2nd text box	and less than or equal to	the value in the 3rd text box	then the value is acceptable (no color is displayed)
greater than or equal to	the value in the 1st text box	and less than	the value in the 2nd text box	then the value is warning low (yellow)
less than	the value in the 1st text box			then the value is critical low (red)

#### Table 2: Alert Thresholds (Continued)

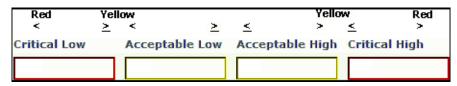

Figure 5: Threshold Bar

# Examples

The system setting for how often the metrics are calculated (that is, the performance calculation interval) is 10 minutes for the purposes of these examples.

**Example 1** For an average of three-minute calls, handling two or more calls but less than or equal to five calls is acceptable. Handling one call is yellow. Handling less than one call is red. Handling more than five calls but less than or equal to eight calls (that is, the calls are too short) is yellow. And handling more than eight calls (that is, short-calling) is red (Figure 6)

NCH 1	2	5	8	
-------	---	---	---	--

#### Figure 6: Threshold Acceptable between Two Values

**Example 2** In the example in Figure 7, handling two or more calls but less than or equal to five calls is acceptable. Handling one call triggers a warning (yellow). Handling less than one call or more than five calls is a critical (red).

NCH 1	2	5	5
-------	---	---	---

#### Figure 7: Threshold Without a High Yellow Warning

**Example 3** In the example in Figure 8, handling one or more calls but less than or equal to five calls is acceptable. Handling more than five calls but less than or equal to eight calls triggers a warning (yellow). Handling less than one call or more than eight calls is a critical (red).

NCH	1	1	5	8

#### Figure 8: Threshold Without a Low Yellow Warning

# **Viewing Thresholds**

## Procedure: Viewing thresholds

**Purpose**: To view threshold values in another level of the monitoring hierarchy.

#### Start of procedure

- 1. Select the Thresholds tab. The thresholds are displayed based on the last selected level.
- 2. Select a level in the Monitoring Hierarchy navigator. The thresholds for the selected level are displayed in the pane on the right, subject to your access permissions. The name of the selected level displays in the title bar.

End of procedure

## Example

The top-level node displays default values (Figure 9 on page 26). The default values for the Average Handle Time (AHT) threshold for the top-level node are 120, 240, 420, and 540. The critical high value for AHT is 540 (seconds). This means that the top-level node stores a value of 540 for critical high AHT.

	Short Name		Time Profile	Current 💌		Enable/Disable All	Reset All

Figure 9: Top Level of the Thresholds Tab

# **Disable/Override All Thresholds**

To disable or override all thresholds at the selected node at once (subject to your access permissions), click the Edit button at the bottom of the pane, then select the Enable/Disable All check box.

# **Defining a Threshold**

Default values for thresholds are provided on installation; however, you can override them at any level, subject to your access permissions. To distinguish between the default values and overridden values, overridden values display in boldface and italicized. Inherited values are in regular font. You can display the default value in a ToolTip by moving the cursor over an edited value. For more information, see "ToolTips" on page 34.

For a group or agent, the state of thresholds at new nodes is inherited from the parent node. This includes whether the threshold is enabled or disabled.

## Procedure: Defining a threshold

Start of procedure

1. Select the Thresholds tab (Figure 4). The thresholds for the last selected level are displayed. **2.** To define thresholds, select a level in the Monitoring Hierarchy navigator. The thresholds and the title bar for the selected level display.

**Note:** If any text field or check box is changed and you select a new level, all changes for the previous level are discarded.

- 3. Click Edit. The fields and Save button enable. The Edit button changes to a Cancel button.
- 4. Type new values in one or more text boxes. The values must increment (or remain the same) from left to right. Positive integer numbers are allowed. No letters or blank spaces are allowed. If an invalid value is entered, an alert message box displays when the Save button is pressed.
- 5. To activate the threshold, check the Enabled checkbox. To deactivate the threshold, clear the Enabled checkbox.
- 6. To save all of the changes to the thresholds, click Save. A confirmation message displays. If any errors are detected through validation, an alert message displays.

#### End of procedure

## Cancel

To discard any changes made and revert the contents of the Thresholds tab to the last values saved to the database, click Cancel.

## Reset

A Reset checkbox will appear next to the a threshold row after one of the threshold attributes has been overridden. Checking the Reset box and saving will result in reverting the threshold attributes to the previously inherited values. The Reset checkbox will then disappear.

The Reset ALL link will perform the reset operation to all overridden thresholds in the manner described above.

# Defining Conditions to Monitor Agent Statistics

The Rules tab (Figure 10) allows you to define the conditions that will continuously monitor the agents' statistics, such as short calling. An alert is issued if the conditions of a rule are met. The Frontline Advisor standard

installation provides default values; however, you should review and change them accordingly.

You can modify them (subject to your access permissions) at the group level, agent level, or for a higher level this should be selected in the hierarchy tree. An agent rule takes precedence over the group rule. A group rule takes precedence over the top-level rule. Rules evaluate and trigger on agent metrics, but not for group metrics.

**Note:** If you have access to the Rules tab, but you have a Read access permission, then you cannot edit or modify the rules (the Edit button is disabled). If the Administrator gives you a Write or Full Control permission, the Edit button is enabled and you can modify the rules.

To distinguish between the inherited values and overridden values, overridden values display in boldface and italicized.

Administration	ration			0
Monitoring Hierarchy	Thresholds Rules Settings			
😑 enterprisepd	Agent >>> enterprisepd		Enable/Dis	able All Reset All
<ul> <li>e computers</li> <li>marketing</li> </ul>	SetOfAgents < 0	Calls Handled which are 300	seconds 20 in the last	mins. 🔺
⊕ team3 ⊕ team4	Agent has no short calls.	Enable/Disable		
<ul> <li>sales</li> <li>⊕ team5</li> <li>⊕ team6</li> </ul>	SetOfAgents < 0	Calls Handled which are 480	seconds 20 in the last	mins.
	Agent has no long Calls.	Enable/Disable		
	SetOfAgents > 1000 has	Calls Handled which re 480	in the last	mins.
	<ul> <li>Description: Agent has too many long calls.</li> </ul>	Enable/Disable		
	SetOfAgents > 1000 has	Calls Handled which are 20	seconds 20 in the last	mins.
	Agent is short Description: calling.	Enable/Disable		
	SetOfAgents < 0 has	Wrap Sessions which are 20	seconds 20 in the last	mins.
	Agent has no calls under the avg wrap time.	Enable/Disable		

Note: Select a hierarchy node in order to display data in the tab.

The agent rule metrics are:

- Handle Time Duration
- Wrap Time Duration
- Count of Holds
- Count of Transfers

Each rule may include the following:

- Rule descriptor—a fixed text that describes the rule; for example, "Set of agents has".
- Rule operator—less than  $(\langle)$ , greater than  $(\rangle)$ .
- Rule operator value—only positive integers are allowed. No letters or blank spaces are allowed.
- Filter descriptor—fixed text that describes the filter, for example, "Calls handled which are"
- Rule filter operator—less than  $(\langle)$ , greater than  $(\rangle)$
- Rule filter value—these are predefined and can be selected from a drop-down list.
- Time Interval—the frequency in which the rule evaluates the metrics. The default value is 20.
- Description—a description of the rule that will display in the Alert Details section when an alert is triggered. The text field allows up to 256 characters. See Figure 11 for an example.

SetOfAgents < has	0	Calls Handled whi are	ich < 🔽 300	seconds 20 in the last	mins.
	Agent has no short calls.	Enable/Disable			

Figure 11: Rule Example

If an invalid value is entered, an alert message box displays when the Save button is pressed.

For example, a rule for short calling could be the set of agents has more than two calls handled that are less than 20 seconds in the last 20 minutes.

# **Viewing Rules**

## Procedure: Viewing rules

#### Start of procedure

- 1. Select the Rules tab. The rules are displayed based on the last selected level, and subject to your access permissions. The edited values display in boldface and italicized.
- 2. Select a level in the Monitoring Hierarchy navigator. The rules for the selected level are displayed in the pane on the right. The name of the selected level displays in the title bar.

#### End of procedure

## **Enable/Disable All Rules**

To enable or disable all rules at once, click Enable/Disable All.

# **Defining Rules**

## **Avoiding Duplication**

If the AgentID and the RuleID of a violation match, FA considers the violation to be duplicated. In all other cases where there is no such match, the rules are considered as two different rules, and the violations as two violations.

When the rule is set at a higher level, it is easy to determine that all child agent groups have the same rule, unless the rule is overridden, and therefore the counts need to be de-duplicated.

However, when the rules are set at the agent-group level, there is no way to determine whether rule sets for sibling agent groups are matched. Therefore, the counts have to be totaled individually.

It is possible for rules between the two such agent groups to differ only slightly, yet they must be counted as distinct violations. If an agent violates the rule in both agent groups, he or she has two rule violations, rather than just one.

To avoid this scenario, rules should be specified at the highest level possible as a best practice.

## Procedure: Defining a rule

#### Start of procedure

- 1. Select the Rules tab (Figure 10). The rules for the last selected level display.
- **2.** To define rules, select a level in the Monitoring Hierarchy navigator. The rules and the title bar for the selected level display.

**Note:** If any text field or check box is changed and you select a new level without saving the changes, all changes are lost.

- Click Edit. The fields and Save button are enabled. The Edit button changes to a Cancel button.
- 4. Type a rule operator value.
- 5. If available, type a rule filter operator value.
- 6. Enter a time interval in the text box.
- 7. Type a comprehensive description of the rule in the Description text box.

**Note:** A rule description must not exceed 128 characters. If you enter a text description that exceeds 128 characters, Frontline Advisor fails to save the rule.

- 8. To activate the rule, check the Enabled checkbox or to deactivate the rule, clear the Enabled checkbox.
- **9.** To save all of the rules, click Save. If any errors are detected through validation, an alert message displays.

#### End of procedure

#### Cancel

To discard any changes made and revert the contents of the Rules tab to the last values saved to the database, click Cancel.

### Reset

Once a constraint has been overridden, it is possible to "reset" the constraint to the inherited values. This effectively removes the override from the system. At

any given node in the hierarchy (apart from the top-level node), a Reset option will be available for all constraints that are overridden at that node.

Checking this option and clicking Save will result in the inherited values for this threshold being used at this node and its descendants (unless overridden elsewhere). Note that choosing to reset an overridden constraint takes precedence over any edits made to the other fields; these changes are lost when the constraint is reset. A value is reset to the value of the closest parent in the tree that has an override or the top-level node if there are no overrides higher up in the hierarchy. For example, take the following hierarchy again and the AHT metric:

Enterpr	isc
🖂 К. Еп	temman
ΘК.	Salley
Œ	R. Busey
8.	J. Conway
G	3 K. Electra
	🕀 R. Jones
	B N. Miller
	@ Computers
	🗷 Notworks
0	E C. Selezar
œ M.	Santlago
⊞ L. Th	aler

Figure 12: Resetting Metrics Example

If the thresholds for the AHT metric are overridden at K.Salley, J.Conway, and Networks, resetting the AHT metric at the Networks node would set it to the values specified for the J.Conway node. If the metrics are then reset at the J.Conway node, the threshold values at that node and all its children will be set to what is specified at K.Salley.

This functionality works for either overridden threshold values or for the Enable/Disable checkbox.

# **Settings**

The Settings tab might not be available, depending on your access permissions.

**Note:** Select a hierarchy node in order to display data in the tab.

On the Settings tab, you configure the system settings for:

• Agent State Interval (seconds)—The agent state interval is the frequency of updating the agent's state data. Typically, it is configured to 10 seconds.

- Agent Performance Interval (seconds)—The agent performance interval is the frequency of updating the group's and agent's performance data and refreshing the cache data. Typically, it is configured to 10 minutes.
- Time profiles—Up to three system-wide time profiles for performance metrics, each with its own definable name, interval (minutes), and type (either Sliding or Growing).
  - **Notes:** 1. Genesys recommends that the time profile values be divisible by either 60 minutes or 10 minutes, otherwise the last interval will be cut short when the midnight reset occurs.
    - 2. The time profile name defined here is the name that displays in the FA dashboard. The time profile name must not exceed 18 characters.

To change the settings, type values in the text boxes and click Save.

To discard any changes made and revert the contents to the last values saved to the database, click CanceL.

Hierarchy Reload In release 8.1.2, a Hierarchy Reload button enables you to re-import the monitoring hierarchy from the Genesys Configuration Manager database.

Users must be granted access to the Hierarchy Reload section of this page in order to view and use the reload button. See Figure 13.

**Warning!** Reloading the hierarchy might take up to an hour, and during the reload period Frontline Advisor will be unavailable.

nce Interval 60		The agent performance interval is the frequency in seconds of
		updating the teams' agent performance data and refreshing the cache data.
Interval (minute	:es): 10	Type: Sliding 🖌 Enable
Interval (minut	tes): 30	Type: Growing 🖌 🗹 Enable
Interval (minut	tes): 480	Type: Growing 🕑 Enable
	Interval (minut	Interval (minutes): 10 Interval (minutes): 30 Interval (minutes): 480

Figure 13: Settings Page

# Navigation

# **ToolTips**

To display a ToolTip for an action, hover the cursor over the icon or button. ToolTips also help you see which values are inherited or overridden, and where those values come from. This helps when navigating through the monitoring hierarchy and viewing or modifying values. ToolTips always display whether a node is enabled or disabled.

When you hover the mouse over a threshold or rule value, a tooltip displays one of the following types:

- Types 1 and 2—The value uses the global default because it does not inherit from any override.
- Type 3—The value is inherited from a node other than the root node (threshold or rule). Two pieces of information are displayed:
  - The value is inherited
  - The node the inherited value comes from
- Type 4—The value overrides an inherited value (threshold or rule). Three pieces of information are displayed:
  - The value is an override value
  - The node whose value is being overridden
  - The inherited value that is being overridden

# Type 1

Monitoring Hierarchy	Thresholds	Rules Setting	s			
Enterprise	Agent >>> K.	Salley				
- K. Entemman	Short Name		Time Profile	Current -		Enable/Disable All
🖃 K. Salley	AAHT	120	240	420	540	Enabled
🖃 J. Conway	AATT	110	230	410	530	om Enterpris e.
<ul> <li></li></ul>	AAWT	5	10	30	45	Enabled

This ToolTip (Figure 14) displays if you mouse over the inherited threshold value of 540 from the root node.

Figure 14: Type 1

Administration	2前の12	
Monitoring Hierarchy <ul> <li>Enterprise</li> <li>K. Entemman</li> <li>K. Salley</li> <li>J. Conway</li> </ul>	Agent >>> K. Salley SetOfAgents < 1 Cal has Agent has no short	En. Is which 300 seconds in the last TimeInterva

Figure 15: Type 2

This ToolTip (Figure 15) displays if you mouse over the inherited rule value of 300 from the root node.

# Type 3

Administration						
Monitoring Hierarchy	Thresholds		s			
<ul> <li>Enterprise</li> <li>K. Entemman</li> </ul>	Agent >>> K. Electra Short Name		Time Profile Current		Enable/Disable All	
E K. Salley	AAHT	120	240	420	600 Inherits from J. Conway	Enabled
😑 J. Conway	AATT	110	230	410	530	Enabled
🛨 C. Salazar 🕂 K. Electra	AAWT	5	10	30	45	Enabled

Figure 16: Type 3

This ToolTip (Figure 16) shows that the Electra/Electronics node inherits its value of 600 from the override value stored at the Conway node.

Administration 1	ITRUK					
Monitoring Hierarchy	Thresholds F	tules Setting	gs <mark>deteksionetsionetsionetsionetsi</mark>		alatiaiaiainin kalatatatatatatata	ialaiaiaiaiaiaiaiaiaiaiaiaiaiaiai

🖃 K. Entemman	Short Name		Time Profile	Current		Enable/Disable All
🖃 K. Salley	AAHT	120	240	420	<b>600</b>	Enabled
🗐 J. Conway	AATT	110	230	410	530 530	Enterprise: 540
E. Salazar	AAWT	5	10	30	45	Enabled

Figure 17: Type 4

This ToolTip (Figure 17) shows that the Conway node overrides the value of 540 that would otherwise be inherited from the Enterprise node.

# **Expanding and Collapsing Hierarchies**

To open the next level, single click the Expand (+) button. To close a single level, single click the Collapse (-) button.

# **Persistent Settings**

Logging in to or out of any machine, or switching between tabs in the Genesys Advisors Browser, retains the following settings:

- Monitoring Hierarchy expansions
- Selected level
- Last selected tab (module)

# **Frontline Advisor Metrics**

The following tables give descriptions and definitions of Frontline Advisor metrics. It contains the following sections:

- State Source Metrics, page 37
- Performance Source Metrics for Voice and Multimedia, page 39
- Rule Source Metrics, page 46
- UI Displayed Metrics, page 49

## **State Source Metrics**

The following tables show the list of source metrics populated by the data contributor(s). These tables also show how the source metrics are populated from the Genesys platform.

**Note:** The format for the login timestamp is locale specific. For English it is HH12:MI:SS AM MM/DD/YYYY. For German it is HH24:MI:SS DD/MM/YYYY.

### **Source Metrics Retrieved for Each Agent**

The source metrics in Table 3 all relate to stored procedure FA\_Update\_State\_Source\_Metric.

#### **Table 3: Source Metrics Retrieved for Each Agent**

Source Metric Name	Description
CurrentState (state)	The current state of the agent.
LoginTime (loginT)	The login timestamp for an agent.

Source Metric Name	Description
TimeInCurrentState (stateT)	The time the agent has been in the current state.
ReasonCode (rcode)	Any reasons attached to the current state of the agent.
Current Skill Group (sg) <sup>a</sup>	Current skill group of the agent
Call Type (service) <sup>a</sup>	Call type

Table 3: Source Metrics Retrieved for Each Agent (Continued)

a. Current Skill Group and Call Type metrics are available only in the Cisco environment.

# Genesys Adapter Statistic Template Definitions for State Metrics

The statistic template definitions in Table 4 all have the Current time profile as their default.

 Table 4: Genesys Adapter Statistic Template Definitions for State

 Metrics

Source Metric Name	Genesys Metric Name
CurrentState	Informiam.CurrentAgentState
LoginTime	Informiam.Login_Timestamp
TimeInCurrentState	Informiam.Time_CurrState
ReasonCode	Informiam.Reason_Code

Each of the statistic templates defined above specifies the following values: DBAppSpecificIdColumnName: stateMetricId

# Performance Source Metrics for Voice and Multimedia

The FA Administrator can set up to three time profiles. The time profiles can be set to any integer from 1 to 1440 and are not confined to a specific set.

Each of the statistic templates defined below specifies the following values:

- DBAppSpecificIdColumnName: patternNum.
- **Note:** Filtered metrics are disabled by default. For information about enabling filtered metrics, see *Genesys Performance Management Advisors 8.1 Deployment Guide*.

Source Metric Name	Description	Metric Filter Required
Voice		
CallsHandled (nch)	Number of calls handled by the agent.	None
CallsTransferred (nct)	Number of calls transferred by the agent.	None
LongestTalkTime (ltt)	The longest talk time of calls handled by the agent in the last <i>xx</i> minutes.	None
LongestWrapTime (lacw)	The maximum amount of time an agent spent on After Call Work in the last <i>xx</i> minutes.	None
Total ACD Inbound ACW Time (ACDInboundACW) <sup>1</sup>	Total amount of time spent performing after-call work for inbound calls.	Yes (Filter for ACD interactions.)
Total ACW Time (totalACW) <sup>1</sup>	Total amount of time spent performing after-call work for all voice calls.	None

## Table 5: Performance Source Metrics Retrieved forAgents

Source Metric Name	Description	Metric Filter Required
TotalHandleTime (tht)	The total amount of time an agent spent handling calls in the last <i>xx</i> minutes. Handle time includes talk time and after-call work.	None
totalLoggedIn <sup>1</sup>	<b>NOTE:</b> The totalLoggedIn metric cannot be viewed on the dashboard. The totalLoggedIn metric is used only for intermediate calculations.	None
Total Non ACD Inbound ACW Time (nonACDInbound ACW) <sup>1</sup>	Total amount of time spent performing after-call work for inbound non-ACD calls.	Yes (Filter for non-ACD interactions.)
Total Not Ready Time (totalNotReady) <sup>1</sup>	Total amount of time in the Not Ready state.	None
Total Not Ready Time - Type X $(totalNotReadyT X)^1$ <b>NOTE:</b> Where X=1, 2, 3, 9. That is, there are 9 totalNotReadyT source metrics.	The total amount of time in a specific Not Ready state. For example, in your enterprise, the Total Not Ready Time - Type 1 may be the total time spent on breaks.	Yes (Filter for Not Ready Time. One filter required for each Type used. For example, if you define a Total Not Ready Time Type 1 and Total Not Ready Time Type 2, you require two filters.)
Total Number of ACD Calls (ACDCalls) <sup>1</sup>	Total number of ACD calls.	Yes (Filter for ACD interactions.)
Total Number of Consult Calls (consultCalls) <sup>1</sup>	The total number of consult calls.	None
Total Number of Internal Calls (internalCalls) <sup>1</sup>	Total number of internal calls.	None

## Table 5: Performance Source Metrics Retrieved forAgents (Continued)

Source Metric Name	Description	Metric Filter Required
Total Number of Non ACD Calls (nonACDCalls) <sup>1</sup>	Total number of non-ACD calls.	Yes (Filter for non-ACD interactions.)
Total Number of Outbound Calls (outboundCalls) <sup>1</sup>	Total number of outbound calls.	None
Total Other ACW Time (otherACW) <sup>1</sup>	Total amount of time spent performing after-call work for internal and consult calls, as well as after-call work that cannot be associated with any call.	None
Total Outbound ACW Time (outboundACW) <sup>1</sup>	Total amount of time spent performing after-call work for outbound calls.	None
Total Ready Time (totalReady) <sup>1</sup>	Total amount of time in the Ready state.	None
TotalTalkTime (ttt)	The total amount of time an agent spent talking on calls in the last <i>xx</i> minutes.	None
Total Time In ACD Calls (totalACD) <sup>1</sup>	Total amount of time spent in ACD calls.	Yes (Filter for ACD interactions.)
Total Time In Consult Calls (totalConsult) <sup>1</sup>	Total amount of time spent in consult calls.	None
Total Time In Internal Calls (totalInternal) <sup>1</sup>	Total amount of time spent in internal calls.	None
Total Time In Non ACD Calls (totalNonACD) <sup>1</sup>	Total amount of time spent in non-ACD calls.	Yes (Filter for non-ACD interactions.)
Total Time In Outbound Calls (totalOutbound) <sup>1</sup>	Total amount of time spent in outbound calls.	None

Table 5: Performance Source Metrics Retrieved forAgents (Continued)

Source Metric Name	Description	Metric Filter Required
TotalWrapTime (tacw)	The total amount of time an agent spent handling calls in the last <i>xx</i> minutes.	None
Web Chat		
ChatInProcess (wInProc)	Number of chat interactions currently in process for the agent in the last <i>xx</i> minutes.	None
ChatAccepted (wAcpt)	Number of chat interactions accepted by the agent in the last <i>xx</i> minutes.	None
ChatRejected (wRjct)	Number of chat interactions rejected by the agent in the last <i>xx</i> minutes.	None
ChatTimedOut (wTO)	Number of chat interactions timed out for the agent in the last <i>xx</i> minutes.	None
ChatTransferred (wTxfrs)	Number of chat interactions transferred by the agent in the last <i>xx</i> minutes.	None
ChatHandled (wH)	Number of chat interactions handled by the agent in the last <i>xx</i> minutes.	None
ChatOffered (wOffered)	Number of chat interactions offered to the agent in the last <i>xx</i> minutes.	None
ChatHandleTime (wHT)	Total handle time for all the chat interactions handled by the agent in the last <i>xx</i> minutes.	None

## Table 5: Performance Source Metrics Retrieved forAgents (Continued)

Source Metric Name	Description	Metric Filter Required
E-mail

Table 6: Genesys Adapter Statistic Template Definitions for	
Performance Metrics (Continued)	

## **Rule Source Metrics**

The rule source metrics in Table 7 are retrieved for each agent, and they all relate to stored procedure FA\_Update\_Rule\_Source\_Metric.

 Table 7: Rule Source Metrics Retrieved Agents

Source Metric Name	Description
Rule 1 – Number of Short Calls (too few)	Number of calls handled in the last <i>xx</i> minutes where the talk time of the call was less than a certain amount of time.
Rule 2 – Number of Short Calls (too many)	Number of calls handled in the last <i>xx</i> minutes where the talk time of the call was less than a certain amount of time.
Rule 3 – Number of Long Calls (too few)	Number of calls handled in the last <i>xx</i> minutes where the talk time of the call was more than a certain amount of time.

Source Metric Name	Description
Rule 4 – Number of Long Calls (too many)	Number of calls handled in the last <i>xx</i> minutes where the talk time of the call was more than a certain amount of time.
Rule 5 – Number of Short Wraps (too few)	Number of calls handled in the last <i>xx</i> minutes where the wrap time was less than a certain amount of time.
Rule 6 – Number of Short Wraps (too many)	Number of calls handled in the last <i>xx</i> minutes where the wrap time was less than a certain amount of time.
Rule 7 – Number of Long Wraps (too few)	Number of calls handled in the last <i>xx</i> minutes where the wrap time was more than a certain amount of time.
Rule 8 – Number of Long Wraps (too many)	Number of calls handled in the last <i>xx</i> minutes where the wrap time was more than a certain amount of time.
Rule 9 – Number of Calls Put On Hold (too few)	Number of calls put on hold in the last $xx$ minutes.
Rule 10 – Number of Calls Put on Hold (too many)	Number of calls put on hold in the last $xx$ minutes.
Rule 11 – Number of Calls Transferred (too few)	Number of calls transferred in the last <i>xx</i> minutes.
Rule 12 – Number of Calls Transferred (too many)	Number of calls transferred in the last <i>xx</i> minutes.

### Table 7: Rule Source Metrics Retrieved Agents (Continued)

# Genesys Statistic Template Definitions for Rule Source Metrics

 Table 8 shows Genesys Adapter statistic template definitions for rule source metrics.

## Table 8: Genesys Adapter Statistic Template Definitions for Rule Source

Source Metric Name	Genesys Metric Name
Rule 1 – Number of Short Calls (too few)	Informiam.Interactions_Processed_inTRange
Rule 2 – Number of Short Calls (too many)	Informiam.Interactions_Processed_inTRange
Rule 3 – Number of Long Calls (too few)	Informiam.Interactions_Processed_inTRange
Rule 4 – Number of Long Calls (too many)	Informiam.Interactions_Processed_inTRange
Rule 5 – Number of Short Wraps (too few)	Informiam.Total_ACW_Calls_inTRange
Rule 6 – Number of Short Wraps (too many)	Informiam.Total_ACW_Calls_inTRange
Rule 7 – Number of Long Wraps (too few)	Informiam.Total_ACW_Calls_inTRange
Rule 8 – Number of Long Wraps (too many)	Informiam.Total_ACW_Calls_inTRange
Rule 9 – Number of Calls Put On Hold (too few)	Informiam.Total_Calls_On_Hold
Rule 10 – Number of Calls Put on Hold (too many)	Informiam.Total_Calls_On_Hold
Rule 11 – Number of Calls Transferred (too few)	Informiam.Total_Calls_Transferred
Rule 12 – Number of Calls Transferred (too many)	Informiam.Total_Calls_Transferred

Each of the statistic templates defined above specifies the following values:

• DBAppSpecificIdColumnName: ruleId

For all the rule statistic templates, the default time range and default time profile are not defined. When a statistic based on a rule statistic template is issued, FA passes across both the time profile and the time range as overrides. These values are based on the settings of the rule for that particular agent.

## **UI Displayed Metrics**

The tables in this section show the list of source metrics displayed on the user interface. This section also shows how some of the source metrics are translated into calculated metrics which are displayed on the UI. These metrics are defined in the FA\_Threshold\_Patterns and FA\_State\_Metrics tables for performance and state metrics respectively.

- **Notes:** 1. The Type column defines whether the metric is sourced directly from a source metric (*raw*), or whether it is calculated from a set of source metrics (*calc*).
  - 2. The Calculation column states the formula used to calculate the metric using the source metric value defined for the agent. The team and supervisor calculations are based on the source metric value defined for all the agents under the respective team or the supervisor

For multimedia metrics the metric internal names contain prefixes indicating the following:

- w—web chat
- e—e-mail

Multimedia metrics (e-mail & web chat) are available only in a Genesys environment.

### **Metrics for Agents**

Table 9 and Table 10 shows state and performance metrics displayed for agents.

Table 9:	State	Metrics	Displayed	for Agents
----------	-------	---------	-----------	------------

Metric Name	Туре	Calculation
CurrentState (state)	Raw	N/A
LoginTime (loginT)	Raw	N/A
TimeInCurrentState (stateT)	Raw	N/A
ReasonCode (rcode)	Raw	N/A

Metric Name	Туре	Calculation
Current Skill Group (sg) <sup>a</sup>	Raw	N/A
*Call Type (service) <sup>a</sup>	Raw	N/A

#### Table 9: State Metrics Displayed for Agents (Continued)

a. Current Skill Group and Call Type metrics are application only in the Cisco environment.

Agent ID and Alert State display in the Column Chooser with other agent state metrics, but they are not source metrics. Agent ID is part of the agent information fetched when FA loads the hierarchy. Alert Status is based on the number of rule violations for an agent.

**Note:** The following agent state thresholds (which you can define in the Frontline Advisor Admin) are evaluated based on the CurrentState (state) and TimeInCurrentState (stateT) source metrics:

- AgentNotReady (ANR)
- AgentonHold (AOH)
- AgentReady (AR)
- AgentTalking (AT)
- AgentWorkNotReady (AWNR)
- AgentWorkReady (AWR)

There is not a one-to-one relationship between each agent state threshold and a source metric. The agent state thresholds apply only when the agent is in one of the preceding states. For example, when the agent is on hold, the AOH threshold is evaluated against the time the agent remains on hold. This contrasts with performance thresholds where there is a one-to-one association between threshold and metric. For example, you can specify thresholds for Average Handle Time (AHT) for an agent. That threshold is evaluated against the associated AHT source metric.

## Table 10: Performance Metrics (Voice/Multimedia) Displayed for Agents

Metric Name	Туре	Calculation
Voice		
CallsHandled (nch)	Raw	N/A
CallsTransferred (nct)	Raw	N/A

# С

# Working With Monitoring Hierarchies

This appendix describes how to define a monitoring hierarchy, gives a worked example and describes how to use hierarchies for coaching. It contains the following sections:

- Hierarchies in Genesys Configuration Server, page 81
- Defining a Monitoring Hierarchy, page 82
- Sample Monitoring Hierarchy, page 84
- Tailoring a Coaching Strategy, page 92

# Hierarchies in Genesys Configuration Server

Monitoring hierarchies are maintained in the Genesys Configuration Server and uploaded to the Frontline Advisor application on startup, or whenever the Hierarchy Reload button on the Settings tab is used.

Hierarchies are imported directly from a third-party system or HR system for new Genesys customers by Genesys Professional Services consultants as part of an initial deployment, then maintained thereafter in the Genesys environment.

Frontline Advisor reads the hierarchy from the Genesys Configuration Server. Customers can configure which location/folder in the Configuration Server houses the hierarchy, and multiple folders can be chosen if the hierarchy is spread over many different folders or tenants.

If multiple folders are specified, FA creates a consolidated view of the hierarchy with a virtual enterprise node linking all the various hierarchies together. The hierarchy in the Configuration Server consists of a tree of folders

with the terminating nodes being *groups*, which in turn have *agents* as members.

These terms replace *supervisors*, *teams* and *agents* in previous versions.

**Note:** Frontline Advisor automatically loads the hierarchy from the Genesys Configuration Server at startup and daily at 02:55 am.

During the deployment of the Frontline Advisor module, you are prompted for:

- The tenant name on the Configuration Server where the FA hierarchy resides.
- The path to the hierarchy root folder on the Configuration Server. This value corresponds to the top-level node in your monitoring hierarchy.
- **Note:** It is possible to have multiple root nodes in the hierarchy, which can come from different tenants.

The root level node(s) are no longer automatically called Enterprise. Users can call them anything that is permitted in the Configuration Manager.

#### **Cisco Impact**

For a pure Cisco environment, the hierarchy should be configured in the Configuration Server as it is done for a Genesys or mixed environment.

However, Cisco Adapter requires FA to send the Cisco AgentSkillID property to identify the agent while registering and issuing statistics. To accommodate this, the AgentSkillID must be added as an Annex property in the Advisors section of each agent in the hierarchy.

The ExternalId.CISCO attribute must be set in the agent/person's Annex tab under the Advisors section, and the value of the ExternalId.CISCO will be the AgentSkillID for the agent in the Cisco environment.

The hierarchy extractor will first try to extract the skill ID from the Annex section for a Cisco configuration. If the ExternaLID property is undefined in the Annex section then it will extract the EmployeeID for the Genesys configuration.

# **Defining a Monitoring Hierarchy**

The sample monitoring hierarchy is used here to explain how to define the data representing a hierarchy. When you define your monitoring hierarchy, you will have this example to work from and guide you.

It is highly recommended that you produce a graphic of your hierarchy. Some hierarchies may be so large that this may not be possible but you should do it if you can. A graphic allows you to see the groups and monitors, as well as annotate the nodes with database IDs and other details that will make working with your hierarchy simpler and less prone to error. For more information on groups and monitors, see "Monitoring Hierarchy Overview" on page 20.

The sample monitoring hierarchy (Figure 18 on page 83) displays both the groups and monitors in one graphic.

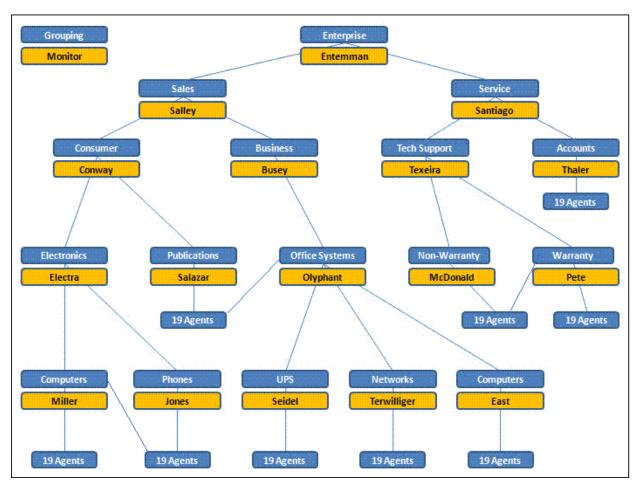

Figure 18: Sample Monitoring Hierarchy—Groups/Monitors

We use this graphic to explain how to define the hierarchy database for the sample monitoring hierarchy.

The sample monitoring hierarchy has nine groups, each with nineteen agents. It is common in contact centers to refer to the first-level groups as "groups" which we do here.

The nine groups (that is, first-level groups) are:

- Computers
- Phones

- UPS
- Networks
- Computers
- Publications
- Non-Warranty
- Warranty
- Accounts

Note that groups are allowed to have the same name (for example, two groups named Computers), provided that they do not share the same parent.

These nine groups appear at various levels in the hierarchy. This is an important concept: groups do not all have to be at the same level of the hierarchy. For instance, the Phones group is two levels below the Accounts group.

The sample monitoring hierarchy has more groups above the group groups. Computers and Phones are in the Electronics group. UPS, Networks, and the second Computers group are in the Office Systems group. Groups within groups continue up the tree, until the root node. The root node of the sample monitoring hierarchy is the Enterprise group.

**Note:** The monitoring hierarchy may be referred to as "tree." Groups may be referred to as "nodes".

In the sample monitoring hierarchy, there are nine groups that group agents, plus eight higher-level groups which define higher and higher groups all the way to the Enterprise group.

The hierarchy also defines the monitors. For simplicity, the sample monitoring hierarchy defines only one monitor per group.

As shown in Figure 18 on page 83, each blue object is a group, and each orange object is a monitor. So, the person named Entemman monitors the Enterprise group, the person named Salley monitors the Sales group, the person named Electra monitors the Electronics group, and so on throughout the tree, with one person monitor for each group.

The next step is to define this organization so it can be successfully imported into Genesys Configuration Manager's database.

# **Sample Monitoring Hierarchy**

This appendix describes a sample monitoring hierarchy. It contains two sections:

- Groupings, page 85
- Monitors, page 85

The sample monitoring hierarchy has nine groups of nineteen agents in a five-level hierarchy (Figure 19).

# Groupings

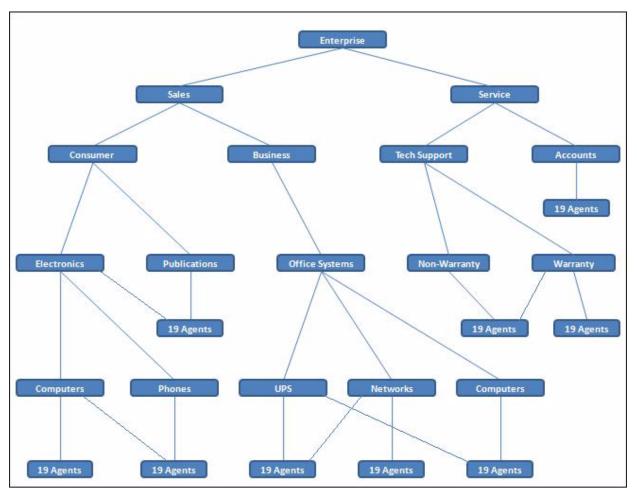

Figure 19 shows a hierarchy of groupings.

#### Figure 19: Sample Monitoring Hierarchy

The nodes labeled 19 Agents each represent a group of 19 real agents.

**Note:** In release 8.1.1, agents can belong to more than one agent group.

#### **Monitors**

Monitoring information defines which people can monitor which groups in Frontline Advisor. Figure 20 on page 86 displays the monitoring information combined with the group information.

The sample monitoring hierarchy defines one monitor (person) for each node in the tree: one person monitors the Phones node, one person monitors the Electronics node, one person monitors the Consumer node, and so on. One person (monitor) for each node in the tree.

The person with the last name Conway is a monitor of the Consumer node. This implies that Conway can monitor all of the groups in the Consumer subtree, which consist of the 19 agents on the Computers group, the 19 agents on the Phones group, and the 19 agents on the Publications group.

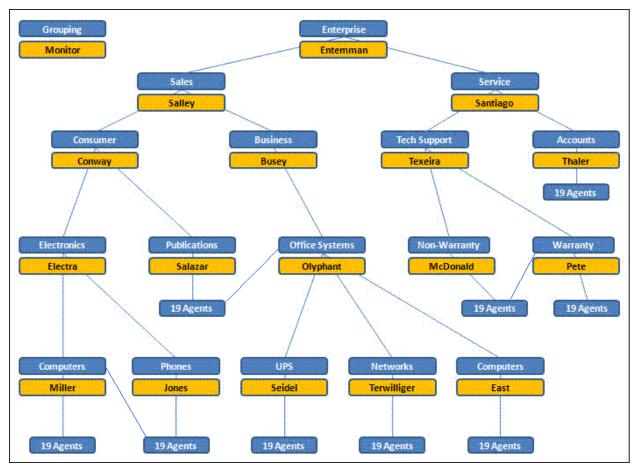

Figure 20: Monitoring Hierarchy

**Sample Hierarchy** A sample monitoring hierarchy has nine groups of nineteen agents in a five-level hierarchy (Figure 19 on page 85). The sample monitoring hierarchy will be used to further explain the concepts of:

- Inheritance
- Enable/Disable

This section provides an overview of these concepts.

The monitoring hierarchy defines how agents are grouped, how groups are grouped, and so on, until there is just one all-encompassing group at the top.

The monitoring hierarchy also shows which people can monitor which groups in FA (For more information, see "Monitors" on page 88).

**Note:** Groups may be referred to as "nodes" and the monitoring hierarchy as "tree."

You may define your own Monitoring Hierarchy. For more information, see Appendix C, "Working With Monitoring Hierarchies," on page 81.

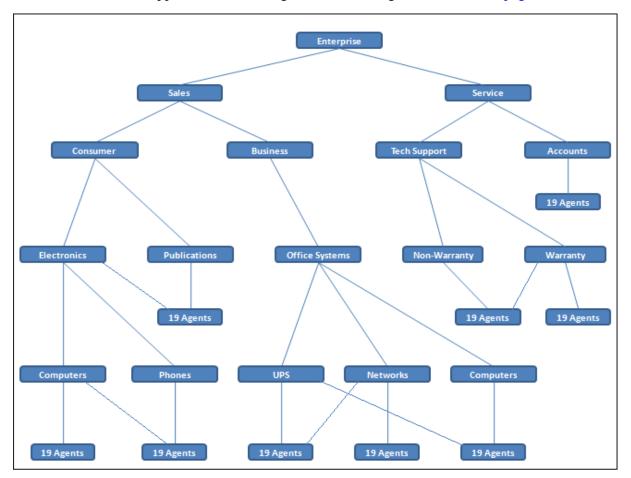

Figure 21: Sample Monitoring Hierarchy

#### Inheritance

Inheritance is the mechanism by which values higher in the tree are passed down to lower levels of the tree.

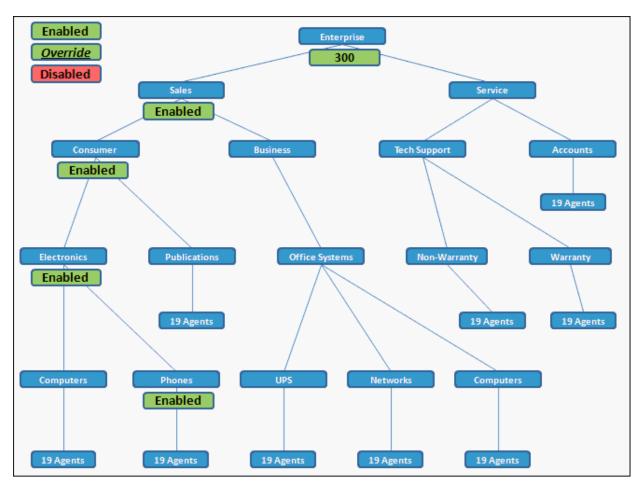

The behavior of a rule or threshold at a node is defined by the nearest ancestor node (including the node itself) where an override is defined. If there are no ancestors with overrides, the behavior is inherited by the top-level ancestor node(s). So, an override propagates down the hierarchy tree, until another

override occurs, with all descendant nodes using the values defined at the override.

The agent's and group's values determine the status and trigger the alerts for thresholds.

The agent's values determine the status and trigger the alerts for rules.

**Note:** Disabling a threshold or rule causes it to be disabled at all inheriting nodes (unless re-enabled at some lower-level node).

#### **Monitors**

Role-based access control defines which people can monitor which groups in Frontline Advisor. Figure 23 on page 89 displays both the monitoring information and the grouping information.

The sample monitoring hierarchy defines one monitor (person) for each node in the tree: one person monitors the Phones node, one person monitors the Electronics node, one person monitors the Consumer node, and so on, with one person (monitor) for each node in the tree.

A manager has monitoring access to all groups for which they have *read* access, as configured by administrators in the Genesys Configuration Manager. A monitor (person) that can monitor a node can only monitor any child nodes if this permission is specifically granted to them on a per-node basis.

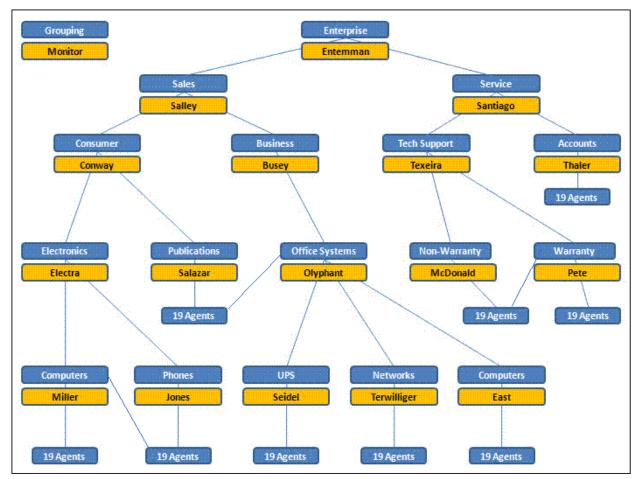

Figure 23: One Monitor per Group in the Monitoring Hierarchy

# **Viewing Rules - Example**

The example below illustrates the default settings for rules at the top node (Enterprise in our monitoring hierarchy) (Figure 24 on page 90).

Agent >>> ente	erprisepd			Enable/Dis	able All Reset Al
SetOfAgents < has	0	Calls Handled	which Cr 300	seconds 20 in the last	mins.
Description:	Agent has no short calls.	☑ Enable/Disable	,		
SetOfAgents < has	0	Calls Handled	which > 7 480	seconds 20 in the last	mins.
Description:	Agent has no long calls.	🗹 Enable/Disable	1		
SetOfAgents > has	1000	Calls Handled	which re 480	seconds20 in the last	mins.
Description:	Agent has too many long calls.	☑ Enable/Disable	,		
SetOfAgents > has	1000	Calls Handled	which v 20 are	seconds 20 in the last	mins.
Description:	Agent is short calling.	Enable/Disable			

Figure 24: Default Calls Handled, 300

When you navigate to the Conway node in the monitoring hierarchy, you see that the value of 300 for Calls Handled from the Enterprise node is inherited by the Conway node (Figure 24).

#### **Defining Rules - Example**

Suppose you want to override the inherited Calls Handled value of 300 with an override value of 600 for the Conway node and its subtree.

To modify a rule value, first click the Edit button (not displayed in Figure 25 because it is scrolled out of view).

Then enter the override value and click the Save button. Figure 25 displays what the values now look like.

From now on, unless changes are made, the Conway node contains an override value of 600. All nodes in the subtree, if they are enabled and if they do not have their own override value, inherit the value of 600.

Overridden rules are not automatically enabled, although in this example you would typically also enable it besides changing the definition.

Administration SLT	ation	0 // D	0
Monitoring Hierarchy	Thresholds Rules Settings		
Enterprise	Agent >>> J. Conway		Enable/Disable All Reset All
🖃 K. Entemman			seconds_20mins. 📥
🖃 K. Salley	SetOfAgents < 0 has	Calls Handled which are 600	in the last
🖃 J. Conway	Agent has no short	<b>-</b>	Tust
🗉 C. Salazar	Description: calls.	Enable/Disable	
🗉 K. Electra		Ellable/Disable	
E N. Miller	SetOfAgents < 0	Calls Handled which are 480	seconds_20mins.
E Computers	has	are	last
N. Miller	Agent has no long Description: calls.		
K. Sherhouse	Description: Carrs.	Enable/Disable	
A. Feghhi S. Schiefelbein	Sat0fAasata	which	_ seconds 20 mins.
A. Young	SetOfAgents > 1000 has	Calls Handled which are 480	in the last
L. Hoerdemann	Agent has too many	1_	
J. Math	Description: long calls.	Enable/Disable	
B. Ledder			
G. Guerrero	SetOfAgents > 1000	Calls Handled which are 20	seconds 20 mins.
R. Ballou			last
E. Johnson	Agent is short Description: calling.		
S. White		Enable/Disable	

Figure 25: Override Calls Handled, 600

# **Defining Thresholds - Example**

Suppose, in Figure 26 on page 91, that you want to store an override value of 600 at the node that Conway monitors, that is, the Computers node. To enter an override value, click the Edit button to enter the edit mode (Figure 12 on page 32). Type a value of 600 for Critical High AHT (Figure 26 on page 91). Then click the Save button. The override value of 600 now displays at the Conway (Computers) node in italic font, and a slightly larger font than the other (inherited) values (Figure 26 on page 91). Note that the node has been set to enable.

From now on, if nothing else changes, the Conway/Computers node and all nodes in that subtree (which do not have an override value) will inherit a value of 600 for critical high AHT.

Enterprise	Agent >>> J. Conv	vay				
- K. Entemman	Short Name		Time Profile	Current 💌		Enable/Disable All
🖃 K. Salley	AAHT	120	240	420	600	Enabled
I. Conway	AATT	110	230	410	530	Enabled
E. Salazar	AAWT	5	10	30	45	Enabled
🗉 N. Miller	ACustomMetric1	2	3	5	7	Enabled
Computers	ACustomMetric2	2	3	5	7	Enabled
K. Sherhouse	ACustomMetric3	2	3	5	7	Enabled
A. Feghhi	ALHT	0	0	480	600	Enabled
S. Schiefelbein A. Young	ALWT	0	0	40	60	Enabled

Figure 26: Override Critical High AHT, 600

**Note:** Because an agent can belong to multiple agent groups, it is possible for a threshold to be defined in different ways according to different overrides at groups of which the agent is a member. In this case, the threshold violation level can be displayed differently, depending on which path the agent is navigated to in the Supervisor Console.

For example, the AHT metric may have a red alert when the agent is viewed as a member of the Sales group, but only yellow when the agent is viewed as a member of the Services group.

Rules can also have different definitions for the same agent based on the path chosen through the hierarchy to reach that agent. Only rule violations for the selected path are shown.

# **Tailoring a Coaching Strategy**

This appendix describes how to tailor a coaching strategy. It contains three sections:

- Coaching Strategy Step 1, page 92
- Coaching Strategy Step 2, page 93
- Coaching Strategy Step 3, page 93

You can to use the concepts explained in this section to tailor a coaching strategy. A coaching strategy can be modified at any time. In general, coaching strategies will do the following:

- 1. Set values according to types of groups.
- 2. Set values according to types of agents.
- 3. Provide a framework over time for continuous improvement.

#### **Coaching Strategy Step 1**

Consider our sample monitoring hierarchy in which the very first level under Enterprise groups the organization into Sales and Service.

In a case like this, the coaching strategy will set sales-oriented values at the Sales node and service-oriented values at the Services node. For example, agents who are selling are most likely expected to talk longer than agents who are delivering customer service.

This Step 1 approach continues throughout the monitoring hierarchy, using inheritance when situations are similar, and using overrides when situations are different.

For example, under the Sales group are Consumer and Business groups. These two groups are similar in some ways because the agents are selling, but they

are also different because one group sells to consumers and the other group sells to businesses.

Agents in both groups are selling and would probably be expected to perform the same number of holds and transfers. So the two groups would be set to inherit the hold and transfer thresholds from the Sales node. Wrap time for selling to consumers might take a shorter time than wrap time for businesses because the latter may include checking the balance in the business account. In this case, Consumer would have override values for Wrap Time different from the override values for Wrap Time in the Business group.

This Step 1 approach of setting values according to similarities and differences of groups continues all the way down the tree to the agents.

#### **Coaching Strategy Step 2**

In any given group, some agents will be new and some will be experienced. Step 2 uses inheritance and override values at the agent level to coach differently according to agent type.

For example, newer agents might be expected to talk a little longer than experienced agents, until the newer agents learn better call control, company policies, computer applications, and so on. Experienced agents know these things, so good coaching will challenge them with tighter override values to help them continue to improve.

Step 2 uses inheritance and overrides at the per-agent level, enabling coaching by agent type.

**Note:** Sometimes Step 2 is required at the group level. For example, sometimes a "nest" is used to incubate new agents, while a "tiger team" is used to leverage the expertise of long-time, experienced agents. Step 2 would use inheritance and override at the group level in these cases, where groups are groups of agent types.

# **Coaching Strategy Step 3**

Step 3 involves the improvement over time of Steps 1 and 2. Good coaching helps people get better over time by incremental improvements.

In Step 3, coaches tighten or loosen values over time to challenge agents and help them continually improve their performance.

# **Document Conventions**

This document uses certain stylistic and typographical conventions introduced here—that serve as shorthands for particular kinds of information.

#### **Document Version Number**

A version number appears at the bottom of the inside front cover of this document. Version numbers change as new information is added to this document. Here is a sample version number:

81fr\_ref\_06-2010\_v8.1.001.00

You will need this number when you are talking with Genesys Technical Support about this product.

#### **Screen Captures Used in This Document**

Screen captures from the product graphical user interface (GUI), as used in this document, may sometimes contain minor spelling, capitalization, or grammatical errors. The text accompanying and explaining the screen captures corrects such errors *except* when such a correction would prevent you from installing, configuring, or successfully using the product. For example, if the name of an option contains a usage error, the name would be presented exactly as it appears in the product GUI; the error would not be corrected in any accompanying text.

#### **Type Styles**

Table 14 describes and illustrates the type conventions that are used in this document.

Type Style	Used For	Examples
Italic	<ul> <li>Document titles</li> <li>Emphasis</li> <li>Definitions of (or first references to) unfamiliar terms</li> <li>Mathematical variables</li> <li>Also used to indicate placeholder text within code samples or commands, in the special case where angle brackets are a required part of the syntax (see the note about angle brackets on page 98).</li> </ul>	Please consult the <i>Genesys Migration</i> <i>Guide</i> for more information. Do <i>not</i> use this value for this option. A <i>customary and usual</i> practice is one that is widely accepted and used within a particular industry or profession. The formula, $x + 1 = 7$ where x stands for
Monospace font (Looks like teletype or typewriter text)	<ul> <li>All programming identifiers and GUI elements. This convention includes:</li> <li>The <i>names</i> of directories, files, folders, configuration objects, paths, scripts, dialog boxes, options, fields, text and list boxes, operational modes, all buttons (including radio buttons), check boxes, commands, tabs, CTI events, and error messages.</li> <li>The values of options.</li> <li>Logical arguments and command syntax.</li> <li>Code samples.</li> <li>Also used for any text that users must manually enter during a configuration or installation procedure, or on a command line.</li> </ul>	Select the Show variables on screen check box. In the Operand text box, enter your formula. Click OK to exit the Properties dialog box. T-Server distributes the error messages in EventError events. If you select true for the inbound-bsns-calls option, all established inbound calls on a local agent are considered business calls. Enter exit on the command line.
Square brackets ([ ])	A particular parameter or value that is optional within a logical argument, a command, or some programming syntax. That is, the presence of the parameter or value is not required to resolve the argument, command, or block of code. The user decides whether to include this optional information.	smcp_server -host [/flags]
Angle brackets (<>)	A placeholder for a value that the user must specify. This might be a DN or a port number specific to your enterprise. <b>Note:</b> In some cases, angle brackets are required characters in code syntax (for example, in XML schemas). In these cases, italic text is used for placeholder values.	smcp_server -host ⟨confighost⟩
