## About This Software

Multimedia is a set of capabilities for the Customer Interaction Management (CIM) Platform. These capabilities enable customers to use graphical user interfaces to implement business process requirements for managing real-time events and processing events over time. As an architecture for non-voice media, the Multimedia capabilities provide a common processing layer for creating event-driven relationships across CIM Platform media options such as Genesys E-mail, Web Media, and Open Media.

This CD contains Genesys Knowledge Management. Knowledge Manager, the user interface component of Genesys Knowledge Management, is used to create and manage the knowledge base's category system, standard responses, and content analysis models.

Content Analyzer, an optional enhancement to Knowledge Management, requires a separate license. Content Analyzer uses natural language processing technology. This software analyzes incoming interactions and assigns them to categories of responses in the standard response category system stored in the Universal Contact Server databases. This application also uses a sophisticated technology to learn from specific examples or past response history.

Knowledge Management must be deployed in conjunction with Genesys Interaction Management, which delivers the core capabilities of Multimedia.
