log-filter-data Section

- sample_name

sample_name

Default Value: hide
Valid Values: copy, skip, hide
Changes Take Effect: After restart

Specifies the filter type that is applied to a value of a key-value pair, or to a key-value pair when a pair is output to a log file. See logging configuration documentation for details.

You can set the default filter to one of three values:

- skip - does not output key-value pair from user data

- hide - hides the value of the key

- copy - prints both the key and its value

This default filter applies to all user data keys, except any individual key in the log-filter-data section, which you custom-define to always hide or show in the log output, regardless of the default filter type.
