log-filter

log-filter

- **default-filter-type**

default-filter-type

Default Value: copy

Valid Values: skip, hide, copy

Changes Take Effect: Immediately, applies to all new reporting events

Sets the default for filtering the output of user data keys to the Interaction server log. You can set the default filter to one of three values:

- skip - does not output key-value pair from user data
- hide - hides the value of the key
- copy - prints both the key and its value

This default filter applies to all user data keys, except any individual key in the log-filter-data section, which you custom-define to always hide or show in the log output, regardless of the default filter type.
